

type of financing. The SOC program provides widely used measures of construction activity, including the economic indicators Housing Starts and Housing Completions, which are from the New Residential Construction series, and New Residential Sales.

We sample about 2,350 new buildings each month (28,200 per year). We inquire about the progress of each building multiple times until it is completed (and a sales contract is signed, if it is a single-family house that is built for sale). We conduct an average of 6.25 interviews for each building sampled. The total number of interviews conducted each year is about 176,250. Each interview takes 5 minutes on average. Therefore the total annual burden is 14,688 hours.

We do not plan any changes to the SOC-QI/SF.1 and SOC-QI/MF.1 forms.

II. Method of Collection

The Census Bureau uses its field representatives to collect the data. The field representatives conduct interviews to obtain data.

III. Data

OMB Number: 0607-0110.

Form Number: SOC-QI/SF.1 and SOC-QI/MF.1.

Type of Review: Regular review.

Affected Public: Individuals or households, business or other for-profit organizations.

Estimated Number of Respondents: 28,200.

Estimated Time per Response: 5 minutes.

Estimated Total Annual Burden Hours: 14,688.

SUPPLEMENTARY INFORMATION:

I. Abstract

The economic census, conducted under authority of Title 13, United States Code (USC), is the primary source of facts about the structure and functioning of the Nation's economy. Economic statistics serve as part of the

framework for the national accounts and provide essential information for government, business, and the general public. The economic data are the Census Bureau's primary program commitment during nondecennial census years. The 2007 Economic Census covering the retail trade and accommodation and food services sectors (as defined by the North American Industry Classification System (NAICS)) will measure the economic activity of more than 1.8 million establishments. The information collected will produce basic statistics by kind of business on the number of establishments, sales, payroll, and employment. It will also yield a variety of subject statistics, including sales by product line, sales by class of customer, and other industry-specific measures. Primary strategies for reducing burden in Census Bureau economic data collections are to increase reporting through standardized questionnaires and broader electronic data collection methods.

II. Method of Collection

Mail Selection Procedures:

Establishments in the retail trade and accommodation and food services sectors of the economic census will be selected from the Census Bureau's Business Register for a mail canvass. To be eligible for selection, an establishment will be required to satisfy the following conditions: (i) It must be classified in the retail trade or accommodation and food services sector; (ii) it must be an active operating establishment of a multi-establishment firm (*i.e.*, a firm that operates at more than one physical location), or it must be a single-establishment firm with payroll (*i.e.*, a firm operating at only one physical location); and (iii) it must be located in one of the 50 states or the District of Columbia. Mail selection procedures will distinguish the following groups of establishments:

1. Establishments of Multi-Establishment Firms

All active operating establishments of multi-establishment firms will be included in the mail component of the potential respondent universe. We estimate that the 2007 Economic Census mail canvasses for the retail trade and accommodation and food services sectors will include approximately 722,000 establishments of multi-establishment firms.

2. Single-Establishment Firms With Payroll

As an initial step in the selection process, we will conduct a study of the

potential respondent universe. This study will produce a set of industry-specific payroll cutoffs that we will use to distinguish large versus small single-establishment firms within each industry or kind of business. This payroll size distinction will affect selection as follows:

a. *Large Single-Establishment Firms*—All single-establishment firms having annualized payroll (from Federal administrative records) that equals or exceeds the cutoff for their industry will be included in the mail component of the potential respondent universe. We estimate that the 2007 Economic Census mail canvasses for the retail trade and accommodation and food services sectors will include approximately 553,000 large single-establishment firms.

b. *Small Single-Establishment Firms*—A sample of single-establishment firms having annualized payroll below the cutoff for their industry will be included in the mail component of the potential respondent universe. Sampling strata and corresponding probabilities of selection will be determined by a study of the potential respondent universe conducted shortly before the mail selection operations begin. We estimate that the 2007 Economic Census mail canvasses for the retail trade and accommodation and food services sectors will include approximately 133,000 small single-establishment firms selected in this sample.

All remaining single-establishment firms with payroll will be represented in the census by data from Federal administrative records. Generally, we will not include these small employers in the census mail canvasses. However, administrative records sometimes have fundamental industry classification deficiencies that make them unsuitable for use in producing detailed industry statistics by geographic area. When we find such a deficiency, we will mail the firm a census classification form. We estimate that the 2007 Economic Census mail canvasses for the retail trade and accommodation and food services sectors will include approximately 445,000 small single-establishment firms that receive these forms.

III. Data

OMB Number: None.

Form Number: The 33 standard forms, seven classification forms, and two ownership or control fliers used to collect information from businesses in
