

that are associated with such occurrences” and “To provide for action to be taken to correct the identified systemic factors” (Sec. 754, items b2 and b3). In addition, the legislation stated that the Secretary shall “Continue research and development investments to improve communication, coordination, and team work in the provision of health care” (Sec. 754, item d4).

In its ongoing response to this legislation, DoD implemented a Web-based patient safety culture survey to a census of all staff working in Army, Navy, and Air Force Military Health System (MHS) facilities in the U.S. and internationally, including Military Treatment Facility (MTF) hospitals as well as ambulatory and dental services. The survey obtains MHS staff opinions on patient safety issues such as teamwork, communications, medical error occurrence and response, error reporting, and overall perceptions of patient safety. The purpose of the survey is to assess the current status of patient safety in MHS facilities as well as to provide baseline input for assessment of patient safety improvement over time. Survey results will be prepared at the facility and Service levels and MHS overall.

Annual Burden Hours: 2,384.

Number of Respondents: 14,022.

Summary of Information Collection

Data Collection Method

The patient safety culture survey is administered as a web-based instrument to a census of all staff, both clinical and non-clinical, working in all U.S. and international MHS facilities. Potential respondents will receive a pre-notification letter followed by an e-mail survey notification containing an embedded hyperlink to the internet location where the survey can be completed. Two additional e-mail survey notifications will be sent, a week apart, so that the data collection field period will be four weeks for each Service. The survey takes about 10 minutes to complete. All survey responses are voluntary and will be individually anonymous; only group-level results will be tabulated to protect individual anonymity.
