

already listed by the State, for inclusion on Arizona's 2002 Section 303(d) list.

Consistent with EPA's regulations, Nevada submitted to EPA its listing decisions under Section 303(d)(2) on October 1, 2002. On November 20, 2002, EPA approved Nevada's listing of 84 waters and associated priority rankings. EPA disapproved Nevada's decisions not to list 15 water quality limited segments and associated pollutants, and additional pollutants for 38 water bodies already listed by the State. EPA identified these additional waters and pollutants along with priority rankings for inclusion on the 2002 Section 303(d) list. EPA solicits public comment on its identification of 15 additional waters and associated pollutants, and additional pollutants for 38 waters already listed by the State, for inclusion on Nevada's 2002 Section 303(d) list.

This information collection will assist the Commission in its rulemaking proceeding revising these rules consistent with a court remand and reversal of previous rules.

*OMB Control Number:* 3060-0863.

*Title:* Satellite Delivery of Network Signals to Unserved Households for Purposes of the Satellite Home Viewer Act (SHVA).

*Form Number:* N/A.

*Type of Review:* Revision of a currently approved collection.

*Total Annual Costs:* None.

*Needs and Uses:* In February 1999, the FCC released a *Report and Order* (R&O), FCC 99-14, that described a method for measuring the Grade B signal strength at a household so that the satellite and broadcast industries and consumers would have a uniform method for calibrating actual household signal strength and thereby determine which consumers are "unserved" by over-the-air network signals. The written records of test results are made after testing and predicting the strength of a television station's signal. The R&O also endorsed a computer model to predict whether a household is likely to be able to receive a signal of the required strength. In May 2000, the FCC released a First Report and Order (First R&O), FCC 00-185, that prescribed an improved point-to-point predictive model (Individual Location Longley-Rice (ILLR)), which provides a reliable and presumptive means for determining whether the over-the-air signal of a network affiliated television station can be received at an individual location. The model can be refined when

additional data become available. Furthermore, the ILLR model significantly reduces the number of measurements conducted at individual households, thereby slowly negating the need for the rules mentioned in OMB's Terms of Clearance. In prescribing the ILLR model, the Commission is complying with new statutory requirements set forth in the Satellite Home Viewer Improvement Act of 1999 (SHVIA).
