## National Center for Education Statistics

The National Center for Education Statistics (NCES) is the primary entity for collecting, analyzing, and reporting data related to education in the United States and other nations. It fulfills a congressional mandate to collect, collate, analyze, and report full and complete statistics on the condition of education in the United States; conduct and publish reports and specialized analyses of the meaning and significance of such statistics; assist state and local education agencies in improving their statistical systems; and review and report on education activities in foreign countries.

NCES activities are designed to address high priority education data needs; provide consistent, reliable, complete, and accurate indicators of education status and trends; and report timely, useful, and high quality data to the U.S. Department of Education, the Congress, the states, other education policymakers, practitioners, data users, and the general public.

We strive to make our products available in a variety of formats and in language that is appropriate to a variety of audiences. You, as our customer, are the best judge of our success in communicating information effectively. If you have any comments or suggestions about this or any other NCES product or report, we would like to hear from you. Please direct your comments to:

7. Estimated membership, number of teachers, revenues, expenditures, and pupil/teacher ratio, for public elementary and secondary schools, by state, for grades prekindergarten through 12: School year 1997-98/ Fiscal year 1998 revised 9

## Highlights

The estimates in this publication are key statistics reported before the close of the 1997-98 school year. They were revised in December 1998 to reflect NCES's newly introduced procedure of adjusting estimates that differed from previously reported values by more than 10 percent from the average rate of change observed among reporting states. They include the number of students in membership, teachers, and high school graduates for public elementary and secondary schools, and total revenues and expenditures for the operation of public elementary and secondary schools. The public school estimates consist of three kinds of data: preliminary actual counts for individual states; estimates derived by the states for the National Center for Education Statistics (NCES); and estimated values developed by NCES using a combination of state-specific and national data.

- There were approximately 46.0 million students in the nation's public elementary and secondary schools in fall 1997 compared with 45.6 million in fall 1996. Student membership has increased by 2.5 million since fall 1993 (table 1).
- Public school students were taught by an estimated 2.7 million teachers this school year, 1997-98 (table 2).
- The student membership and teacher count data yield pupil-to-teacher ratios for grade levels prekindergarten through 12 of 16.6 for public schools in school year 1997-98 (table 7).
- An estimated 2.4 million public school students graduated from high school in the 1996-97 school year. About the same number ( 2.4 million) of students are expected to graduate from high school in the 1997-98 school year (table 3).
- Revenues for public elementary and secondary education in fiscal year 1997 are estimated to be $\$ 298.1$ billion (table 4), and they are expected to rise to approximately $\$ 308.5$ billion in fiscal year 1998. The per-pupil expenditure for public education is anticipated to be $\$ 6,127$ per student in membership for the 1997-98 school year (table 7).

## The Early Estimates System

The early estimates system is designed to allow NCES to publish selected key statistics before the end of the school year in which they are reported. The information is collected through contact with public school state education agencies.

The source of universe statistical information about public elementary and secondary education is the Common Core of Data (CCD) - data collected annually by NCES from state education agencies. For most CCD surveys, these data are reported to NCES from March through September, after which they undergo NCES and state editing, and are adjusted for missing data. High school graduate and fiscal data are reported a year later than student and teacher data. In contrast, the estimates included in this report were reported in November of the school year to which they apply.

Forty-eight states and the five outlying areas participated in the 1997-98 public school early estimates survey. The estimates reported here were provided by state education agencies and represent the best information on public elementary and secondary schools available to states at this stage of the school year. They are, however, subject to revision. All estimates for the two states that did not return the survey (Arizona and New Jersey) and the District of Columbia, were calculated by NCES. NCES also estimated missing data items among a number of reporting states.

The data in this revised 1997-98 publication do not include changes reported by the states. Rather, they reflect NCES's newly-introduced procedure for adjusting estimates that differ from values reported for the prior year by more than 10 percent from the average rate of change observed among reporting states.

The tables in this publication include two kinds of data for the different years. "Reported" data are reported and published figures and "estimated" data are those for the current (1997-98) school year.

Estimates are generally provided by the reporting states. However, in some cases states reported actual counts, and in others, the states reported no number and NCES produced the estimates. Finally, some state-reported estimates were revised by NCES to fall within 10 percent of the change rate among reporting states.

a/ Data imputed by NCE based on previous year's data.
Actual preliminary count by state.
NOTE: All data are state estimates, except where noted. Detail may not sum to total due to rounding.
Estimates are as of December 1998.
SOURCE: U.S. Department of Education, NCES, Common Core of Data.

## Technical Notes

## Public School Early Estimates Methodology

In early October 1997 survey forms were sent out to each state education agency. States were asked to complete the form and return it by mail or facsimile (fax) form. Those states that had not responded by mid-November were contacted by telephone. All data were checked for reasonableness against prior years' reports, and follow-up calls were made to resolve any questions. In some cases the change from 1997 to 1998 reflected improved reporting. When states did not supply a data item, NCES estimated a value. These values are footnoted. If one or more states required an estimated number, then the national total for that item is marked as estimated.

Nonfiscal data for 1996-97 are shown as "preliminary" in this report because NCES has not yet released the final file. New Jersey did not report any nonfiscal data for 1996-97, and values are imputed for that state.

Missing values for student membership were estimated by multiplying a state's membership data from the 1996-97 school year by the rate of growth experienced by that state in student membership from 1995-96 to 1996-97.

Missing values for other data elements were estimated by state, using ratios of the missing quantity to the student membership value, and then adjusting this number by the average percent change for reporting states from the previous year for this element. For example, the procedure for estimating the number of teachers in the 1997-98 school year involved: (1) calculating the teacher-to-student ratio in the given state in 1996-97; (2) calculating the total growth rate in teacher-to-student ratios for reporting states from 1996-97 to 1997-98; and (3) multiplying the state student membership for the 1997-98 school year by the ratio calculated in step 1, and then multiplying this product by the growth rate calculated in step 2. Equivalent procedures were used for estimating numbers of high school graduates, revenues, and current expenditures.

In order to control for some of the imprecision in the estimation process, state-reported values were changed if they reflected a rate of change that was more than 10 percent above or below the average change rate among reporting states for the most recent reported year.

## Accuracy of Estimates

Past years' data provide an indication of the differences between early estimates and final data. The early estimate of public school membership for fall 1996 was $45,592,213$, which represented an increase of 1.7 percent from the fall 1995 value. The actual decrease, based on the preliminary count of $45,240,267$, was slight (less than .1 percent). Last year's estimate indicated that there were 2,666,034 public school teachers for 1996-97, implying an increase of 2.5 percent over the previous year, while preliminary numbers indicated an increase of 2.4 percent in the public school teachers over that year. For the number of public high school graduates, the estimate projected an increase of 0.3 percent from 1994-95 to 1995-96, while preliminary numbers indicate an increase of 0.6 percent. Revenues were estimated to increase 5.0 percent from 1994-95 to 1995-96, and the reported increase was also 5.0 percent. The estimated increase in current expenditures, from 1994-95 to 1995-96, was 5.1 percent, while the actual increase was 5.3 percent.

Looking at last year's estimates for each state and comparing them with final data, we see that all states' estimates of student membership for school year 1996-97 were within 8.0 percent of the final reported count. Two states' estimates for teachers were in error by more than -1.0 percent of the reported count. All but two states' estimates for high school graduates were within 10 percent of the reported count of graduates for school year 1995-96. For this same school year (fiscal year 1996), three states' estimates for revenues and one outlying area's estimates for expenditures differed from the final reported amount by more than 10 percent of that amount.

## Definitions

Membership is the unduplicated count of students on the roll of the school or local education agency on the school day closest to October 1. Unless otherwise specified, membership includes all students in prekindergarten through grade 12 and ungraded classes.

Teachers are professional staff who provide instruction to students and maintain daily student attendance figures for a group or class at any of the levels from prekindergarten through grade 12 and ungraded classes. Teacher numbers are reported in full-time equivalents (FTE), which are computed by dividing the amount of time employed in instruction by the time normally required of a full-time position.

Pupil-to-teacher ratio is the number of students divided by the number of teachers. The pupil-to-teacher ratio for public schools reported here represents an average across all levels. There is, however, variability across school districts, prekindergarten, elementary, and secondary grade levels, and across programs such as special education and gifted and talented.

Graduates are defined as students receiving a regular high school diploma during the school year, including summer graduates. Early estimates are provided for the recent graduates from the 1996-97 school year, with projections for the 1997-98 school year.

Revenues are defined as additions to assets which do not incur an obligation that must be met at some future date, do not represent exchanges of fixed assets, and are available for expenditure by the local education agencies in the state. Revenues include funds from local, intermediate, state, and federal sources.

Current expenditures are funds spent for operating local public schools and include such items as salaries for school personnel, student transportation, school books and materials, and energy costs, but exclude capital outlay and interest on school debt.

Per-pupil expenditure (or per-pupil revenue) is the total current expenditure (or revenue) for public elementary and secondary education in a state divided by the student membership. The numbers reported here, based on membership, can be expected to be smaller than per-pupil expenditures (and per-pupil revenues) based on average daily attendance, because the membership counts are generally larger than average daily attendance. As with pupil-toteacher ratio, the average reported here does not reflect variations across school districts, grade levels or programs.

## For More Information

For information about the Public School Early Estimates System or the Common Core of Data, contact Lena McDowell, Office of Educational Research and Improvement, National Center for Education Statistics, 555 New Jersey Avenue NW, Washington, DC 20208-5651, telephone (202) 219-1628 or e-mail to "lena_mcdowell@ed.gov." Or contact Frank Johnson, telephone (202) 219-1618, or e-mail to "frank_johnson@.ed.gov".

## Acknowledgments

The author would like to thank all of the people in the state education agencies who supplied the data for this publication. This report would not have been possible without their contributions. This report was prepared under the overall guidance and direction of Paul Planchon, Associate Commissioner of Elementary and Secondary Education Statistics in NCES. The author also acknowledges the comments and suggestions of the following reviewers: Cindy Prince of the National Education Goals Panel, Nancy Protheroe of the Educational Research Service, William Sonnenberg of NCES, Data Development and Longitudinal Studies Group (DDLSG), Patricia Brown of NCES, Surveys and Cooperative Systems Group (SCSG), and Lee Hoffman, Robert Burton, and Marilyn McMillen of NCES. A special thanks from the author goes to Frank H. Johnson of NCES, for his statistical expertise in putting this publication together.
