

**Read Me for
Preliminary Compilation of Descriptive Geoenvironmental Mineral Deposit Models
Edward A. du Bray, editor
U.S. Geological Survey Open-File Book 95-831**

The above book was released in paper form in June, 1996. After its release, it was converted to digital form as Adobe Acrobat (.pdf) files using Acrobat version 2.1. The Acrobat presentation you are accessing is a facsimile of the published book. A few minor editorial changes were made to the book to correct errors and some of the figures have been enhanced. The figures are the same as those in the book, but some have been reprocessed or redrafted and others converted from grayscale to color to make them more useable. The book was split into separate files to minimize download times for World Wide Web presentation. In January 2004, the book was enhanced with the creation of a Navigation page, plus the addition of links, web links and bookmarks to improve ease of use.

Navigating through this book is simple: The Navigation page has links to each chapter and the chapter subheadings, plus links to the book's supplementary documents such as the Title Page, Contents Page, Acknowledgments, and this Read Me page. Use the Navigation page to get around the entire book.

Each chapter has nested bookmarks linking to its sections, subsections, figures and tables. Click the + icons in the bookmark pane to expand the nested bookmarks. Within the text, there are links to figures, tables and references, plus web browser links to specific mineral models cited by the authors.

If you wish to save an individual chapter or the Navigation page to your computer, they will open fine, but please note that bookmark links (not web links) to other files will be broken unless those files are also saved to the same folder. For your convenience, the entire book is being made available as a compressed file for downloading; save and unzip the book to its own folder and all links will work. The entire file set is approximately 19.5 Mb.

Acrobat Reader is available for downloading from Adobe free of charge. The current version of Acrobat is 6.0; these documents should open fine with Acrobat Reader versions 5 and above. Please review the Acrobat Help for specific information about using Acrobat features.

The paper version of this book may be obtained from the source below for \$41.25 (price subject to change, and the supply is limited):

USGS Information Services
Denver Federal Center
Box 25286, MS 306
Denver CO 80225-0046
Telephone: 303-202-4210
Fax: 303-202-4188

The Acrobat presentation of the book was done by the following members of the Mineral Resources Program staff in Denver:

Douglas B. Stoesser
Patricia H. Drouillard
Barbara Ramsey
William D. Heran

The navigation, link and bookmark enhancement was done by Stuart Giles of the Mineral Resources Program staff in Denver.
