HPC Acquisitions: Track 2 benchmark update (refer to [NSF 05-625](#) and [NSF 0605](#))

Based on experience with last year's Track 2 competition, we are dropping the requirement to include benchmark results or projections for the OOCORE benchmarks in the current Track 2 competition (deadline November 30, 2006).
Proposing organizations are encouraged to use large processor core counts in their benchmarking and to use a relatively recent version of the GAMESS package, for example, the 27 June 2005 version used in the DoD HPC Modernization Program's TI-07 HPC acquisition. Please specify which version of GAMESS was used.
