The Declassified Collection of

CORONA, ARGON, AND LANYARD
RECORDS

Declassified by the National Reconnaissance Office on November 26, 1997

Introduction

The CORONA, ARGON, LANYARD (CAL) collection consists of documents related to the development, acquisition, and operation of the Intelligence Community's first film-return satellite reconnaissance systems.

Organization

The collection has been organized around the National Reconnaissance Office's (NRO's) Records Control Schedule. The NRO's Records Control Schedule defines the major subject categories of NRO records. If a category is not included in the index, that category did not contain any CAL records.

About the Index

Each major file series category in the Records Control Schedule is subdivided into additional categories, and most are further subdivided into specific topics. Within a category, records are listed in chronological order by date of origin using the format YYMMDD. If the month and/or day of origin is unknown, the date will be indicated by the year followed by "0101" or the year and month followed by "01", for example 650101 or 650601.

CAL records consist of several types; documents, memoranda, telegram/cables, letters, and charts. In the index, the title of each record begins with a descriptor of its type, ("Doc" for document, "Memo" for memorandum, "TWX" for telegram/cable).

The title in the index may vary somewhat from that on the document because some titles contained classified information and therefore had to be redacted. Telegrams/cables generally do not have titles, so the title in the index frequently represents a brief gist of the subject matter.

Records which are attachments to a primary record are filed with the primary record. They are listed in the index immediately below the primary record and indented slightly. The page count for the primary record includes the pages of all of the attachments, therefore the page count for attachments is shown as "0."

Some of the documents in the CAL collection were provided by presidential libraries. Copies of these documents were made available to the NRO and included in the collection as part of the effort to make the CAL collection as complete as possible. Documents from presidential libraries are not filed according to the NRO Records Control Schedule categories but are found in a separate "Presidential Library" section that has been subdivided by individual library.

To find a document of interest -

1. Review the major file series categories and their descriptions to locate the broad area of interest; for example:

100 Overall Program Management, Policy, and Analysis

2. Within the major category, review the subcategory listings to find the category of interest, for example:

101 Records of the Director, NRO

3. Within the subcategory, review the topic listings to find the topic of interest, for example:

101-01 Records of the Director, Deputy Director, Deputy Director for Military Support, and Chief of Staff

4. Within the topic, review the title listing to identify the record of interest. Note the record's reference number, for example:

Ref #	Title	Date	Pages	Barcode #
1/A/0021	MEMO: MEETING ON PROJECT VEDAS	590616	3	1400041231

5. Proceed to the area within the Reading Room containing the CAL collection and locate the file cabinet corresponding to the first part of the reference number (i.e., file cabinet #1). Open the file cabinet drawer corresponding to the second part of the reference number (drawer A) and locate the record corresponding to the final four digits of the reference number (record #0021).

6. If you need assistance or if you wish to obtain copies of any of the records contained in the CAL collection, please contact the Reading Room Librarian.

Description of Major File Series Categories
