School Characteristics and Climate

Student Perceptions of Their School's Social and Learning Environment

In both high- and low-minority public schools, the majority of students reported that when they work hard at school, their teachers praise their efforts. In addition, they reported that they make friends with students from other racial and ethnic groups.

This indicator examines how public school 10th-graders perceived their school's learning and social environment in the spring of 2002. When asked about their school's learning environment, the majority of students reported that teachers praised their efforts on schoolwork (63 percent), and that students did not feel "put down" by teachers (87 percent), but that students often got away with misbehavior (53 percent) (see supplemental table 29-1). There were no discernible differences in the percentage of students who reported these perceptions between high- and low-minority schools. About half of 10th-grade students in all public schools reported that disruptions by other students did not interfere with their learning (53 percent). However, students in low-minority schools were more likely to report this perception than students in high-minority schools (59 vs. 44 percent).

students (83 percent) (see supplemental table 29-2). The percentage of students who reported these perceptions was not measurably different in low- and high-minority schools. In contrast, the percentage of students who reported that fights often occurred between different racial/ethnic groups and the percentage who reported not feeling safe at school differed between low- and high-minority schools, with the percentage agreeing increasing from low- to high-minority schools.

Among students of the same race or ethnicity, differences were found between high- and low-minority schools in four of the eight student perception measures. For example, White and Hispanic students in high-minority schools were more likely to agree with the statement that misbehaving students often "get away with it" than their counterparts in low-minority schools. Asian/Pacific Islander, White, and Hispanic students in high-minority schools were more likely to report that fights often occur between different racial/ethnic groups than their peers in low-minority schools. The opposite was true for Blacks.

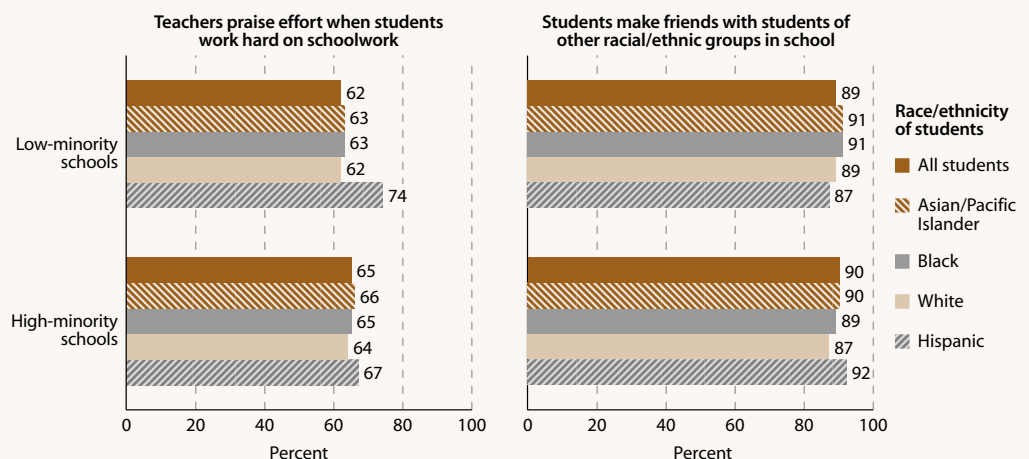

NOTE: When asked to respond about their school's social and learning environment, students could respond in four ways: "Agree" includes responses "Strongly agree" and "Agree"; "Disagree" includes responses "Disagree" and "Strongly disagree." Schools classified as "low minority" had less than 25 percent minority enrollment, and schools classified as "high minority" had 50 percent or more minority enrollment. Only data for major racial/ethnic groups are shown separately in the figure. Black includes African American, Pacific Islander includes Native Hawaiian, and Hispanic includes Latino. Race categories exclude Hispanic origin unless specified. Detail may not sum to totals because of rounding.
