## What is

 The Nation's Report Card ${ }^{\text {wM }}$ ?The Nation's Report Card ${ }^{\text {TM }}$ informs the public about the academic achievement of elementary and secondary students in the United States. Report cards communicate the findings of the National Assessment of Educational Progress (NAEP), a continuing and nationally representative measure of achievement in various subjects over time.
For over three decades, NAEP assessments have been conducted periodically in reading, mathematics, science, writing, U.S. history, civics, geography, and other subjects. By collecting and reporting information on student performance at the national, state, and local levels, NAEP is an integral part of our nation's evaluation of the condition and progress of education. Only information related to academic achievement and relevant variables is collected. The privacy of individual students and their families is protected, and the identities of participating schools are not released.
NAEP is a congressionally authorized project of the National Center for Education Statistics (NCES) within the Institute of Education Sciences of the U.S. Department of Education. The Commissioner of Education Statistics is responsible for carrying out the NAEP project. The National Assessment Governing Board oversees and sets policy for NAEP.

[^0]
## Executive Summary

The writing skills of eighth- and twelfthgraders improved in 2007 compared to earlier assessment years, with gains across many student groups.
Nationally representative samples of more than 165,000 eighth- and twelfth-graders participated in the 2007 National Assessment of Educational Progress (NAEP) writing assessment (the assessment was not administered at grade 4 in 2007). Each student responded to 2 out of 20 possible writing tasks intended to measure one of three purposes for writing: narrative, informative, or persuasive.
Results are presented nationally for both eighth- and twelfthgraders, and in participating states and urban districts only for eighth-graders. Comparing the results of the 2007 writing assessment to results from previous years shows the progress eighth- and twelfth-graders are making in improving writing skills.

## Scores increase in 2007 for both eighth- and twelfth-graders nationally

Average writing scores were higher in 2007 than in previous assessments in 2002 and 1998. Increases were also seen since 2002 in percentages of students performing at or above the Basic achievement level but not at or above Proficient.

## At grade 8 in 2007

- The average writing score was 3 points higher than in 2002 and 6 points higher than in 1998.
- The percentage of students performing at or above the Basic level increased from 85 percent in 2002 to 88 percent and was also higher than in 1998.
- The percentage of students performing at or above the Proficient level was higher than in 1998 but showed no significant change since 2002.

## At grade 12 in 2007

- The average writing score was 5 points higher than in 2002 and 3 points higher than in 1998.
- The percentage of students performing at or above the Basic level increased from 74 percent in 2002 to 82 percent and was also higher than in 1998.
- The percentage of students performing at or above the Proficient level was higher than in 1998 but showed no significant change since 2002.

## Most racial/ethnic groups gain

As shown in the chart below, average writing scores increased since 2002 for White, Black, and Asian/Pacific Islander students at both grades. The average score for Hispanic eighth-graders was higher in 2007 than in both previous assessments, while there was no significant change for Hispanic students at grade 12.

## Some racial/ethnic and gender gaps are closing

Gains for minority students and male students have contributed to the narrowing of some gaps. At grade 8, the 6-point increase in the average score for Black students from 2002 to 2007 contributed to a smaller gap between White and Black students than in both previous assessments.

At grade 12, an 8-point increase for male students since 2002 contributed to a narrowing of the male - female gap in comparison to 2002, but there was no significant change in comparison to the gap in 1998.

| Student groups | Grade 8 |  | Grade 12 |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Since 1998 | Since 2002 | Since 1998 | Since 2002 |
| Overall | $\uparrow$ | $\uparrow$ | $\uparrow$ | $\uparrow$ |
| White | $\uparrow$ | $\uparrow$ | $\uparrow$ | $\uparrow$ |
| Black | $\uparrow$ | $\uparrow$ | $\leftrightarrow$ | $\uparrow$ |
| Hispanic | $\uparrow$ | $\uparrow$ | $\leftrightarrow$ | $\stackrel{ }{+}$ |
| Asian/Pacific Islander | $\stackrel{ }{+}$ | $\uparrow$ | $\leftrightarrow$ | $\uparrow$ |
| American Indian/ Alaska Native | $\stackrel{ }{+}$ | $\leftrightarrow$ | $\leftrightarrow$ | $\ddagger$ |
| Male | $\uparrow$ | $\uparrow$ | $\uparrow$ | $\uparrow$ |
| Female | $\uparrow$ | $\uparrow$ | $\uparrow$ | $\leftrightarrow$ |
| Gaps |  |  |  |  |
| White - Black | $\downarrow$ | $\downarrow$ | $\leftrightarrow$ | $\leftrightarrow$ |
| White - Hispanic | $\stackrel{ }{+}$ | $\leftrightarrow$ | $\leftrightarrow$ | $\leftrightarrow$ |
| Female - Male | $\leftrightarrow$ | $\leftrightarrow$ | $\leftrightarrow$ | $\downarrow$ |

$\uparrow$ Indicates the score was higher or the gap increased in 2007.
$\downarrow$ Indicates the score was lower or the gap decreased in 2007.
$\leftrightarrow$ Indicates there was no significant change in the score or the gap in 2007.
$\ddagger$ Reporting standards not met. Sample size is insufficient to permit a reliable estimate.

These and other results can be found at http://nationsreportcard.gov.

## Some states gain at grade 8

${ }^{1}$ Department of Defense Education Activity (overseas and domestic schools).
Of the 39 states and jurisdictions that participated in both 2002 and 2007, average writing scores for eighth-graders in

19 states and Department of Defense schools increased,
1 state decreased, and
18 states showed no significant change.
Twelve states and the District of Columbia did not participate or did not meet the minimum participation guidelines for reporting.

## Urban districts gain

As shown in the chart to the right, eighth-graders in three of the four districts that participated in both the 2002 and 2007 NAEP writing Trial Urban District Assessments

| District | Since 2002 |
| :--- | :---: |
| Atlanta | $\uparrow$ |
| Chicago | $\uparrow$ |
| Houston | $\leftrightarrow$ |
| Los Angeles | $\uparrow$ | (TUDA) improved. When compared to their home states, Atlanta and Los Angeles made greater gains since 2002.

While scores in 9 of the 10 participating urban districts were lower than the average score for eighth-graders in the nation, when comparing results for only lower-income students, scores in six districts were not significantly different from the nation. Lower-income students in Boston and New York City scored higher on average than their peers in large central cities (i.e., cities with populations of 250,000 or more).

Among the 10 districts that participated in 2007, the average writing score for eighth-graders in Charlotte was higher than the score for public school students in large central cities. Also in comparison to large central cities, scores for students in Cleveland and Los Angeles were lower, and scores in the remaining seven districts were not significantly different.

## Overview of the Writing Assessment

> The NAEP writing assessment measures writing skill by asking students to write essays and stories for a variety of audiences. In this way, the assessment collects important information on students' writing ability and offers a broad picture of how well our nation's students can explain, persuade, and describe using written words.

## The Writing Framework

The NAEP writing framework serves as the blueprint for the writing assessment. Developed under the guidance of the National Assessment Governing Board, the framework represents ideas from a wide range of organizations that are part of writing education, including writing experts, school administrators, policymakers, teachers, parents, and others.

Informed by writing research and theory, the NAEP writing framework emphasizes that good writers can communicate effectively in a variety of styles. In addition, effective writing requires a thoughtful approach that includes composing and revising.

The framework specifies that students' writing skills be measured by asking students to write for different purposes and audiences. Tasks on the assessment require students to inform, to persuade, and to tell
stories - real or imagined - and to do so for a range of audiences, among them teachers, newspaper editors, potential employers, and peers.
The current NAEP writing framework was first used to guide the development of the 1998 assessment at grades 4,8 , and 12 and has continued to be used through 2007. (A new framework will be used for the 2011 NAEP writing assessment.) Updates to the framework have provided more detail about the kinds of writing tasks to include in the assessment but have not changed the content, allowing students' performance in 2007 to be compared with previous years. While grade 4 was not assessed in 2007, fourth-graders were assessed in previous years and may be assessed again in the future.

For more information on the framework, visit http://www.nagb.org.

## PURPOSE FOR WRITING

Narrative-Narrative writing encourages writers to incorporate their imagination and creativity in the production of stories and personal essays. At its best, narrative writing fosters imagination, creativity, and speculation by allowing writers to express their thoughts and to analyze and understand actions and emotions.

Informative-In informative writing, the writer provides the reader with information. This type of writing is used to share knowledge and to convey messages, instructions, and ideas. When used as a means of exploration, informative writing helps both the writer and the reader to learn new ideas and to reexamine old conclusions.

Persuasive-Persuasive writing seeks to persuade the reader to take action or bring about change. This type of writing involves a clear awareness of what arguments might most affect the audience being addressed. Writing persuasively also requires the use of such skills as analysis, inference, synthesis, and evaluation.

## Assessment Design

The 2007 writing assessment consisted of 20 writing tasks at each grade. To minimize the burden on any one student, each student took only a portion of the assessment, consisting of two 25 -minute sections. Each section featured one writing task intended to measure one of the three purposes for writing. The writing tasks incorporated a variety of stimuli to elicit students' writing, including photographs, cartoons, newspaper articles, letters, poems, or literary excerpts. Examples of students' responses are included in this report.
Students had the opportunity to write in a variety of forms, such as essays, letters, and stories. Space was provided in each test booklet section to enable students who chose to do so to engage in prewriting activities. Students were also given a writing brochure that presented them with ideas about how to plan their writing and review what they wrote. They were encouraged to use this in the process of responding to each writing task. While the same general ideas were presented in the brochures for both grades 8 and 12, the wording varied slightly for each grade. Copies of the brochures given to eighth- and twelfth-graders are provided in each grade section of this report.

The emphasis on each purpose for writing varied from grade to grade to match the differing levels of student development and instructional focus. As shown in
table 1, the targeted percentage of assessment time gave comparable weight to all three purposes at grade 8 and stressed informative and persuasive writing at grade 12.

## Scoring Students' Writing

Students' written responses were evaluated according to scoring guide criteria describing six performance ratings: Excellent, Skillful, Sufficient, Uneven, Insufficient, and Unsatisfactory. Specific scoring guides were developed for narrative, informative, and persuasive writing at each grade. Recognizing that a national standardized writing assessment such as NAEP constrains students' opportunities to plan and revise, responses to assessment tasks were viewed as first drafts and not as polished pieces of writing. Only the students' completed responses were considered in the rating process; scorers did not see students' planning pages.

Table 1. Target percentage of assessment time in NAEP writing, by grade and purpose for writing: 2007

| Purpose for writing | Grade 8 | Grade 12 |
| :--- | :---: | :---: |
| Narrative | $33 \%$ | $25 \%$ |
| Informative | $33 \%$ | $35 \%$ |
| Persuasive | $33 \%$ | $40 \%$ |

NOTE: Detail may not sum to totals because of rounding.
SOURCE: U.S. Department of Education, National Assessment Governing Board, Writing Framework and Specifications for the 2007 National Assessment of Educational Progress, 2006.

The students selected to take the NAEP writing assessment represent all eighthand twelfth-grade students across the U.S. Students who participate in NAEP play an important role by providing information on academic achievement in our nation's schools. NAEP data can only be obtained with the cooperation of schools, teachers, and students nationwide.

Representative samples of schools and students at grades 8 and 12 participated in the 2007 NAEP writing assessment (table 2). The national results reflect the performance of all eighth- and twelfth-graders in public, private, Bureau of Indian Education, and Department of Defense schools. The numbers of schools and students participating at grade 8 were larger than at grade 12 in order to report results for individual states and 10 urban districts. The state and urban district results reflect the performance of eighthgraders in public schools only.

Table 2. Number of participating schools and students in NAEP writing assessment, by grade: 2007

| Grade | Schools | Students |
| :--- | ---: | ---: |
| Grade 8 | 6,810 | 139,900 |
| Grade 12 | 660 | 27,900 |

NOTE: The numbers of schools are rounded to the nearest ten, and the numbers of students are rounded to the nearest hundred.
SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 2007 Writing Assessment.

## Scale Scores

NAEP writing results are reported on a $0-300$ scale. Because NAEP scales are developed independently for each subject, average scores cannot be compared across subjects even when the scale has the same range. Although the writing scale score ranges are identical for both grades 8 and 12 , they were derived independently, and therefore, scores cannot be compared across grades. For example, the average score of 156 at grade 8 does not denote higher performance than the score of 153 at grade 12.
In addition to reporting an overall writing score for each grade, scores are reported at five percentiles to show trends in results for students performing at lower (10th
and 25 th percentiles), middle (50th percentile), and higher (75th and 90th percentiles) levels.

## Achievement Levels

Based on recommendations from educators and members of the general public, the Governing Board sets specific achievement levels for each subject area and grade. Achievement levels are performance standards showing what students should know and be able to do. They provide another perspective with which to interpret student performance. NAEP results are reported as percentages of students performing at or above the Basic and Proficient levels and at the Advanced level.

States may define their assessment standards differently than NAEP. For example, a state's proficient achievement level may be the standard for promotion to the next grade, while NAEP defines the Proficient level as competency over challenging subject matter.
As provided by law, NCES, upon review of congressionally mandated evaluations of NAEP, has determined that achievement levels are to be used on

## NAEP ACHIEVEMENT LEVELS

BASIC denotes partial mastery of prerequisite knowledge and skills that are fundamental for proficient work at a given grade.

PROFICIENT represents solid academic performance. Students reaching this level have demonstrated competency over challenging subject matter.

ADVANCED represents superior performance.
a trial basis and should be interpreted with caution. The NAEP achievement levels have been widely used by national and state officials.

## Item Maps

Item maps provide another way to interpret the scale scores and achievement-level results for each grade. The item maps displayed in each grade section of this report show student performance on NAEP writing tasks at different points on the scale.

## Accommodations and Exclusions in NAEP

Many of the same testing accommodations allowed on state and district assessments (e.g., extra testing time or individual rather than group administration) are provided for students with disabilities or English language learners participating in NAEP. Even with the availability of accommodations, some students are excluded from the NAEP assessments by their schools. Jurisdictions vary in their proportions of special-needs students (especially English language learners). These variations, as well as differences in policies and practices regarding the identification and inclusion of special-needs students, lead to differences in exclusion and accommodation rates. These differences should be considered when comparing student performance over time and across jurisdictions.
While the effect of exclusion is not precisely known, the validity of comparisons of performance results could be affected if exclusion rates are comparatively high or vary widely over time. In the 2007 writing assessment, overall exclusion rates (for both students with disabilities and English language learners) in the nation were 3 percent at both grades 8 and 12 , state exclusion rates at grade 8 varied from 1 to 7 percent, and the 10 urban school districts excluded from 2 to 11 percent. See appendix tables A-1 through A-5 and A-13 for the percentages of students accommodated and excluded at the national, state, and urban district levels. More information about

NAEP's policy on inclusion of special-needs students is available at http://nces.ed.gov/nationsreportcard/about/ inclusion. asp.

## Interpreting Results

Results from the 2007 writing assessment are compared to results from previous assessment years. Changes in performance results over time may reflect not only changes in students' knowledge and skills but also other factors, such as changes in student demographics, education programs and policies (including policies on accommodations and exclusions), and teacher qualifications.
NAEP results adopt widely accepted statistical standards; findings are reported based on a statistical significance level set at .05 with appropriate adjustments for multiple comparisons. In the tables and figures of this report that present results over time, the symbol $\left(^{*}\right)$ is used to indicate that a score or percentage in a previous assessment year is significantly different from the comparable measure in 2007. The symbol is also used to highlight differences between scores or percentages of students in urban districts and those in the nation or large central cities. As a result of larger eighth-grade sample sizes beginning in 2002 , smaller differences (e.g., 1 or 2 points) can be found to be statistically significant than would have been detected with the smaller sample sizes used in 1998 or in the twelfth-grade samples.

Score differences or gaps are calculated based on differences between unrounded numbers. Therefore, the reader may find that score differences cited in the text may not be identical to the difference obtained from subtracting the rounded values shown in the accompanying tables or figures.
Not all of the data for results discussed in this report are presented in corresponding tables or figures. These and other results can be found at http://nationsreportcard.gov. For additional information, use the NAEP Data Explorer at http://nces.ed.gov/nationsreportcard/nde.

## 8th Grade

## Eighth-graders' writing skills improve

The nation's eighth-graders demonstrated better writing skills in 2007 than in previous years. As shown in figure 1, the average score of 156 in 2007 was higher than in both previous assessments. Eighth-graders scored 3 points higher than in 2002 and 6 points higher than in 1998.

Figure 1. Trend in eighth-grade NAEP writing average scores
Scale score

[^1]SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998, 2002, and 2007 Writing Assessments.

## Lower- and middle-performing students improve since 2002

Students at the 10th, 25 th, and 50 th percentiles scored higher in 2007 than in both previous assessments (figure 2). Scores for students at the 75th and 90th percentiles showed no significant change in comparison to 2002, but both were higher than in 1998.

Figure 2. Trend in eighth-grade NAEP writing percentile scores

[^2]Achievement-level results also showed increases for lower- and middle-performing students. The percentage of eighth-graders performing at or above the Basic level was higher in 2007 than in both previous assessments (figure 3). While there was no significant change in the percentage of students performing at or above Proficient since 2002, the percentage was higher in 2007 than in 1998.

Figure 3. Trend in eighth-grade NAEP writing achievement-level results

* Significantly different ( $p<.05$ ) from 2007.

SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998, 2002, and 2007 Writing Assessments.

## Racial/ethnic groups gain

Most racial/ethnic groups showed writing progress since 2002. White, Black, and Hispanic students had higher average writing scores than in 2002 and 1998. Asian/Pacific Islander students scored higher than in 2002, but the apparent change in comparison to 1998 was not statistically significant (figure 4).

There was no significant change in the average writing score for American Indian/Alaska Native students compared to previous assessment years. Although not shown here, scores for American Indian/Alaska Native students at the 50th and 75th percentiles were higher in 2007 than in 1998.

Figure 4. Trend in eighth-grade NAEP writing average scores, by race/ethnicity
Scale score

## ACHIEVEMENT-LEVEL RESULTS

Information is available on achievement-level results for racial/ethnic groups and other reporting categories at http://nationsreportcard.gov/writing_2007/data.asp.

## White - Black gap narrows

Significant gaps continue to exist between the writing scores of White students and other racial/ethnic groups. A 23-point gap exists between White and Black eighth-graders. However, with the increase in the score for Black students in 2007, this gap was
narrower than in both previous assessments (figure 5). The 22-point score gap between White and Hispanic students was not significantly different from the gaps in 2002 or 1998.

Figure 5. Trend in eighth-grade NAEP writing average scores and score gaps, by selected racial/ethnic groups

* Significantly different ( $p<.05$ ) from 2007.

NOTE: Black includes African American, and Hispanic includes Latino. Race categories exclude Hispanic origin. Score gaps are calculated based on differences between unrounded average scores.

In each assessment year, NAEP collects information on student demographics. As shown in table 3, the percentage of White eighth-graders in the population was lower in 2007 than in 2002 and 1998, while the percentage of Hispanic students was higher. The percentage of Black students also increased from 15 percent in 1998 and 2002 to 16 percent in 2007. The percentage of Asian/Pacific Islander students was higher in 2007 than in 1998.

Table 3. Percentage of students assessed in eighth-grade NAEP writing, by race/ethnicity: 1998, 2002, and 2007

| Race/ethnicity | 1998 | 2002 | 2007 |
| :--- | :---: | :---: | :---: |
| White | $70^{*}$ | $65^{*}$ | 59 |
| Black | $15^{*}$ | $15^{*}$ | 16 |
| Hispanic | $11^{*}$ | $14^{*}$ | 18 |
| Asian/Pacific Islander | $3^{*}$ | 4 | 5 |
| American Indian/ <br> Alaska Native | 1 | 1 | 1 |

[^3]
## Females outscore males

The performance of both female and male eighthgraders showed overall improvement in writing. In 2007, both groups scored 3 points ${ }^{1}$ higher than in 2002 and 6 points higher than in 1998 (figure 6). The 20-point score gap between the two groups in 2007 was not significantly different from the gap in 2002 or 1998.

[^4]Figure 6. Trend in eighth-grade NAEP writing average scores and score gaps, by gender

Scale score

* Significantly different ( $p<.05$ ) from 2007.

NOTE: Score gaps are calculated based on differences between unrounded average scores.

## Scores vary by family income

NAEP uses students' eligibility for the National School Lunch Program as an indicator of poverty. Students from lower-income families are eligible (see Technical Notes for eligibility criteria), while students from higherincome families are not.

For eighth-graders in 2007,

- 32 percent were eligible for free lunch,
- 6 percent were eligible for reduced-price lunch,
- 55 percent were not eligible for the school lunch program, and
- information was not available for 7 percent of the students.

Students eligible for free lunch scored lower than those eligible for reduced-price lunch. Both groups scored lower on average than students who were not eligible. There was a 25 -point score gap between students who were eligible for free lunch and those who were not eligible (figure 7).

Figure 7. Average scores in eighth-grade NAEP writing, by eligibility for free or reduced-price school lunch: 2007

SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998, 2002, and 2007 Writing Assessments.

## Private school students score higher than public school students

In 2007, nine percent of eighth-graders attended private schools, and 91 percent attended public schools. Private school eighth-graders outperformed their peers in public schools in both 1998 and 2007. Although response rates were too low to report results in 2002 for private schools overall, results could be reported for Catholic school students. Private school students attending Catholic schools had higher average scores than their peers in public schools for all three assessments (table 4).
It is important to note there may be many reasons why private school students perform differently, on average, from public school students. Differences in demographic composition, admission policies, parental involvement, and other factors not measured in NAEP can influence student achievement.

Eighth-graders in all three categories have made gains in writing since the initial assessment year. Average writing
scores were higher in 2007 than in 1998 for public and private school students. The score for Catholic school students in 2007 showed no significant change from 2002 but was 6 points higher than in 1998.

Table 4. Average scores in eighth-grade NAEP writing, by type of school: 1998, 2002, and 2007

| Type of school | 1998 | 2002 | 2007 |
| :--- | :---: | :---: | :---: |
| Public | $148^{*}$ | $152^{*}$ | 154 |
| Private | $167^{*}$ | $\ddagger$ | 173 |
| Catholic | $169^{*}$ | 172 | 175 |

$\ddagger$ Reporting standards not met. Sample size is insufficient to permit a reliable estimate.

* Significantly different ( $p<.05$ ) from 2007.

## Public school students in large central cities improve since 2002

NAEP results for large central cities reflect the performance of public school students in 66 cities with populations of 250,000 or more. Results for large central cities are reported for grade 8 to provide an appropriate comparison group for the Trial Urban District Assessment (TUDA) results presented later in this report. Students in large central cities represent a peer group with characteristics that are more similar to students in urban districts than in the nation as a whole.

While the average writing score in 2007 for students in large central cities was lower than the score for public school students nationally, scores for both groups increased in comparison to 2002 (figure 8). The average score for public school students in the nation was 3 points ${ }^{2}$ higher than in 2002, and the score for students in large central cities was 6 points higher.

## FOR MORE INFORMATION...

Additional results for large central cities are included with those for trial urban districts in figures 12 and 13 , tables 8 through 10, appendix tables A-13 through A-20, and at http:// nationsreportcard.gov/writing_2007/w0037.asp.

[^5]
## State Performance at Grade 8

## Compared to 1998, students in most participating states have increased their average writing scores, and no states showed a decline.

State participation in the NAEP writing assessment is voluntary. Forty-five states participated in the 2007 writing assessment. Thirty-eight states participated in both 2007 and 2002, and 33 participated in both 2007 and 1998, allowing for comparisons over time. Beyond the states, the Department of Defense schools participated in all three assessment years.

The maps presented on the following page illustrate the changes in average writing scores since 2002 and 1998 for participating states and Department of Defense schools. For purposes of illustration, changes in average scores for White, Black, and Hispanic students are highlighted in comparison to 2002, and overall achievement-level results are highlighted in comparison to 1998.

## Progress Compared to 2002

- Average writing scores increased in 19 states and the Department of Defense schools (figure 9).
- Scores decreased only in North Carolina and showed no significant change in the remaining 18 states.

For raciallethnic groups...

- Scores increased for White students in 16 states, Black students in 8 states, and Hispanic students in 7 states.
- Scores increased for all three racial/ethnic groups in Connecticut, Georgia, and Pennsylvania.
- No states showed a decline in average scores for White, Black, or Hispanic students.

[^6]FOR MORE INFORMATION...
State Comparison Tool orders states by students' performance overall and by student groups both within an assessment year and based on changes across years (http://nces.ed.gov/ nationsreportcard/nde/statecomp).

State Profiles provide information on each state's school and student populations and a summary of its NAEP results (http://nces.ed.gov/nationsreportcard/ states).

Educational Progress (NAEP), 2007 Writing Assessment.

## Urban District Results at Grade 8

> Among the four districts with results for both 2002 and 2007, students in Atlanta, Chicago, and Los Angeles demonstrated increased writing ability. There was no significant score change in Houston.

## Most districts perform comparably to or higher than large central cities but below the nation

Students in Charlotte scored higher than public school students in large central cities in 2007, while scores for students in Cleveland and Los Angeles were lower (table 7). Scores in the remaining seven districts were not significantly different from large central cities. The full names of the 10 participating districts are presented in table 7, while abbreviated versions are used in the tables and figures that follow.

Compared to the performance of public school students in the nation in 2007, the average scores in almost all the participating districts were lower. The one exception was Charlotte, where the score was not significantly different from the national score.

Table 7. Average scores in NAEP writing for eighth-grade public school students in urban districts versus the nation and large central cities: 2002 and 2007

## The NAEP Trial Urban District Assessment

The results from the NAEP Trial Urban District Assessment (TUDA) make it possible to compare the performance of students in participating urban school districts to public school students in the nation and in large central cities (i.e., cities with populations of 250,000 or more). The comparison with large central cities is made because these students represent a peer group with characteristics that are most similar to the characteristics of students in the 10 participating urban districts.

Representative samples of between 900 and 2,000 eighthgraders were assessed in each district. Sample sizes were proportionate to the district enrollment. Students in the TUDA samples were also included in the large central city, state, and national samples.

The five districts participating for the first time in 2007 were Austin, Boston, Charlotte, Cleveland, and San Diego. While results from the 2002 writing assessment were reported for the District of Columbia, after participating in the 2007 NAEP reading and mathematics assessments, the population available to participate in the 2007 writing assessment was too small.

As when interpreting national and state results, differences in exclusion and accommodation rates should be considered when comparing student performance in urban districts. See appendix table A-13 for the percentages of students accommodated and excluded in each participating district. Additional information is available at http://nces. ed.gov/nationsreportcard/about/inclusion.asp.

## Most districts surpass or are comparable to large central cities in percentages reaching Proficient

The percentages of students performing at NAEP achievement levels provide a broader look at the range of student performance in participating urban districts.
Looking at the percentages of students who performed at or above Proficient in the districts compared with large
central cities shows higher percentages in Austin, Charlotte, and San Diego, and lower percentages in Cleveland and Los Angeles (figure 12). In Atlanta, Boston, Chicago, Houston, and New York City, the percentages were not significantly different from those in large central cities.

Figure 12. Achievement-level results in NAEP writing for eighth-grade public school students, by jurisdiction: 2007

\# Rounds to zero.
NOTE: The shaded bars are graphed using unrounded numbers. Detail may not sum to totals because of rounding.

Over time, along with increases in average scores, the percentage of students performing at or above Proficient increased from 10 percent in 2002 to 19 percent in 2007 in Atlanta and from 16 to 23 percent in Chicago (figure 13). Note that the percentages of students at or above Proficient are based on the addition of unrounded percentages as opposed to the rounded percentages shown in the graph.

The percentages of students performing below the Basic level were lower in 2007 than in 2002 for all four participating districtsAtlanta, Chicago, Houston, and Los Angeles (with corresponding increases in percentages at or above Basic). Achievement-level results for large central cities showed a similar pattern.

Figure 13. Achievement-level results in NAEP writing for eighth-grade public school students, by selected jurisdictions: 2002 and 2007

\# Rounds to zero.

* Significantly different ( $p<.05$ ) from 2007.

NOTE: The shaded bars are graphed using unrounded numbers. Detail may not sum to totals because of rounding. SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 2002 and 2007 Trial Urban District Writing Assessments.

## Two districts gained more than their states since 2002

Among the three districts for which changes since 2002 could be compared with changes in their home state, two showed greater gains. Atlanta showed a 15 -point gain from 2002 to 2007 compared to a 6-point gain in Georgia (figure 14). Los Angeles showed a 9-point gain, while the apparent increase in California was not statistically significant. Because Illinois did not meet participation guidelines for reporting in 2002, the 10-point gain in Chicago could not be compared to its state results.

When the average writing scores for the 10 participating urban districts were compared to those for their home states (presented earlier in this report in table 5), scores in 8 of the districts were 5 to 23 points lower than in their states. Scores for Charlotte and San Diego were not significantly different from those in North Carolina and California, respectively.

Figure 14. Average scores in NAEP writing for eighth-grade public school students, by selected states and urban districts: 2002 and 2007

$\ddagger$ Reporting standards not met. Illinois did not meet minimum participation guidelines for reporting in 2002.

* Significantly different ( $p<.05$ ) from 2007.

## Gender gaps comparable to large central cities and the nation

Female students scored 16 to 24 points higher on average than male students in the 10 districts participating in the 2007 writing assessment (table 8). These gaps were comparable to the gaps in the nation and large central cities.

In most districts, scores for both groups were lower than scores for their peers in the nation and comparable to or higher than scores for those in large central cities. In Cleveland and Los Angeles, however, scores for both male and female students were lower than the scores of their peers in large central cities.

Table 8. Average scores and score gaps in NAEP writing for male and female eighth-grade public school students, by jurisdiction: 2007

|  | Average scale score |  |  |
| :--- | :--- | :--- | :--- |
| Jurisdiction | Male | Female | Score gap |

| San Diego | $137^{* *}$ | $158^{* *}$ | 21 |

* Significantly different ( $p<.05$ ) from large central city public schools.
** Significantly different ( $p<.05$ ) from nation (public schools).
NOTE: Score gaps reflect the average scores for female students minus the scores for male students and are calculated using unrounded numbers.

Among the four districts with results for both 2002 and 2007, scores increased for both male and female students in Atlanta, Chicago, and Los Angeles (figure 15). In Houston, the average score for male students was higher in 2007 than in 2002, while there was no significant change for female students.

Figure 15. Average scores in NAEP writing for eighth-grade public school students, by selected urban districts and gender: 2002 and 2007

* Significantly different ( $p<.05$ ) from 2007.

SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 2002 and 2007 Trial Urban District Writing Assessments.

## Black and Hispanic students in many districts perform comparably to peers in the nation

TUDA districts vary in demographic composition, both from each other and the nation. For example, as shown in table 9, Black students made up 17 percent of eighthgraders in public schools across the nation in 2007, while in the districts the percentages ranged from 10 percent in Los Angeles to 89 percent in Atlanta. Hispanic students made up 19 percent of the eighth-grade public school students in the nation, but in the districts the percentages ranged from 3 percent in Atlanta to 74 percent in Los Angeles.

While overall average scores were generally lower for eighth-graders in the urban districts than in the nation, scores for Black and Hispanic students in many
districts were not significantly different from their peers in the nation, and scores for White and Hispanic students in some districts were higher. In Chicago, the average writing score for Hispanic students was higher than the score for Hispanic students in the nation. The average scores for White students in Austin, Boston, Charlotte, and Houston were higher than the score for White students in the nation. Scores for Black students in most districts were not significantly different from the score for their peers in the nation; however, scores for Black students in Austin, Cleveland, and Los Angeles were lower than in the nation.

Table 9. Percentage of eighth-grade public school students and average scores in NAEP writing for selected race/ethnicity categories, by jurisdiction: 2007

* Significantly different ( $p<.05$ ) from large central city public schools.
** Significantly different ( $p<.05$ ) from nation (public schools).
NOTE: Black includes African American, Hispanic includes Latino, and Pacific Islander includes Native Hawaiian. Race categories exclude Hispanic origin. Detail may not sum to totals because results are not shown for students whose race/ethnicity was American Indian/Alaska Native or unclassified. SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 2007 Trial Urban District Writing Assessment.

## Black and Hispanic students gain in some districts since 2002

Among the four districts with results for both 2002 and 2007, scores increased for Black students in Atlanta and Chicago, for Hispanic students in Chicago and Los Angeles, and for White students in Los Angeles (figure 16). The apparent decrease in the score for White students in Houston was not statistically significant.

Figure 16. Average scores in NAEP writing for eighth-grade public school students, by selected urban districts and racial/ ethnic groups: 2002 and 2007

[^7]
## Scores for lower-income students in some districts comparable to the nation and large central cities

The participating urban districts had larger percentages of students from lower-income families (as measured by eligibility for the National School Lunch Program) than students nationally. While 41 percent of grade 8 public school students in the nation were eligible for free/reduced-price school lunch in 2007, the percentages of eighth-graders eligible in the districts ranged from 48 percent in Charlotte to 100 percent in Cleveland (table 10). Eligible students generally scored lower on average than students who were not eligible.
In about one-half of the participating districts, average scores for students who were eligible for free/reducedprice school lunch were not significantly different from the scores for eligible students in the nation and in large central cities. In Boston and New York City, eligible students scored higher than eligible students in large central cities but not significantly different from those in the nation. The scores for eligible students in Austin, Cleveland, and Los Angeles were lower than the scores for eligible students in the nation and large central cities. On the other hand, students in Austin who were not eligible scored higher on average than non-eligible students in the nation and large central cities.

Table 10. Percentage of eighth-grade public school students and average scores in NAEP writing, by eligibility for free/ reduced-price school lunch and jurisdiction: 2007

** Significantly different ( $p<.05$ ) from nation (public schools).
NOTE: Results are not shown for students whose eligibility for free/reduced-price school lunch was not available. In Cleveland, all students were categorized as eligible for free/reduced-price school lunch.
SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 2007 Trial Urban District Writing Assessment.

## Nation - district gaps narrower for lower-income students

As shown in figure 17, the size of the score gap between the performance of students in the districts and students nationally changes when looking at lower-income students only. When the score for all eighth-graders in a district was compared to the overall score for the nation, the size of the gaps ranged from 5 points lower than the nation in Boston to 21 points lower in Cleveland (the 1-point difference between Charlotte and the nation was not statistically significant).

These gaps change when only lower-income students (those eligible for free/reduced-price school lunch) in the nation and in each district are compared. In Atlanta, Boston, Chicago, Houston, and New York City, the gaps were not statistically significant (the gap in Charlotte rounded to zero). In Cleveland, the gap remained significant but fell from 21 points to 7 points. The apparent 5-point change in the gap for Austin (i.e., the difference between -8 and -13 ) was not statistically significant.

Figure 17. Score gaps between districts and the nation for all students and lower-income eighth-grade public school students in NAEP writing, by urban district: 2007

\# Rounds to zero.

* The score-point difference between the district and the nation (public) is statistically significant ( $p<.05$ ).

NOTE: In NAEP, lower-income students are students identified as eligible for free/reduced-price school lunch. Score gaps are calculated using unrounded numbers. ## FOR MORE INFORMATION...

Additional results from the 2007 Trial Urban District Assessment in writing are provided in appendix tables A-14 through A-20 and at http://nationsreportcard.gov.

## Assessment Content at Grade 8

The content of the writing assessment varied to reflect the skills appropriate for each grade level, with differing proportions of writing tasks measuring each of the three purposes for writing: narrative, informative, and persuasive. At grade 8, a slightly higher proportion of the tasks measured narrative and informative writing than persuasive writing. The 2007 eighth-grade writing assessment included 20 different writing tasks (7 narrative, 7 informative, and 6 persuasive). A copy of the grade 8 planning brochure is presented below.

## Grade 8 Student Brochure on Planning and Reviewing Writing

Ideas for Planning Your Writing
To plan your wrifing, you could do one or more of the following:

Brainstorm
List lots of ideas:
choose which ones to use.

Imagine Imagine talking about your topic with someone.

Draw Draw a picture or a diagram of your topic.

Web
Draw lines between ideas to connect them.

Outline
Organize ideas into main points and subpoints.

Ideas for Reviewing Your Writing
After writing, think about the following:

Purpose
Have I said what I want to say?

Development Do I need to add more details?
Do I need to take out some details?

Organization
Are the parts in the right order? Do the parts fit together?

Clarity
Will my audience understand? Is my writing easy to read?

Correctness
Grammar?
Punctuation?
Spelling?
Capitalization?

## Writing Achievement Levels at Grade 8

The following achievement-level descriptions for grade 8 writing are applied to first drafts that students are expected to generate within the limited time constraints in a large-scale assessment environment, and not to final or polished student writing. The cut score depicting the lowest score representative of that level is noted in parentheses.

Basic (114): Eighth-grade students performing at the Basic level should be able to produce an effective response within the time allowed that shows a general understanding of the writing task they have been assigned. Their writing should show that these students are aware of the audience they are expected to address, and it should include supporting details in an organized way. The grammar, spelling, punctuation, and capitalization in the work should be accurate enough to communicate to a reader, although there may be mistakes that get in the way of meaning.

Proficient (173): Eighth-grade students performing at the Proficient level should be able to produce an effective response within the time allowed that shows an understanding of both the writing task they have been assigned and the audience they are expected to address. Their writing should be organized, making use of techniques such as sequencing or a clearly marked beginning and ending, and it should make use of details and some elaboration to support and develop the main idea of the piece. Their writing should include precise language and some variety in sentence structure, and it may show analytical, evaluative, or creative thinking. The grammar, spelling, punctuation, and capitalization in the work should be accurate
enough to communicate to a reader; there may be some errors, but these should not get in the way of meaning.

Advanced (224): Eighth-grade students performing at the Advanced level should be able to produce an effective and fully developed response within the time allowed that shows a clear understanding of both the writing task they have been assigned and the audience they are expected to address. Their writing should show some analytical, evaluative, or creative thinking, and should demonstrate precise word choice and varied sentence structure. Their work should include details and elaboration that support and develop the main idea of the piece, and it may make use of strategies such as analogies, illustrations, examples, anecdotes, or figurative language to clarify a point. At the same time, the writing should show that these students can keep their work clearly and consistently organized. Writing by eighth-grade students performing at the Advanced level should contain few errors in grammar, spelling, punctuation, capitalization, and sentence structure. These writers should demonstrate good control of these elements and may use them for stylistic effect in their work.

## FOR MORE INFORMATION...

The results presented in this section are for all eighth-graders in the nation. State and urban district results for released writing tasks are also available at http://nces.ed.gov/ nationsreportcard/itmrls.

## Informative Writing at Grade 8

An important aspect of informative writing is being able to convey ideas and information to an audience about something the writer knows well. The writing task presented here asks students to write about something eighth-graders are familiar with, namely, backpacks. To engage students in the task, create context, and give them a starting point for their writing, they received a letter in an envelope from a fellow student coming from far away. This student is looking for information about backpacks and how they are used. The letter also helps to give students a
starting point for their writing in the limited time period available to them. Sixty-seven percent of eighth-graders received a rating of "Sufficient" or higher on their responses to this writing task.

Percentage of eighth-grade students at each rating level in 2007

| Excellent | Skilful | Sufficient | Uneven | Insufficient | Unsatisfactory |
| ---: | ---: | ---: | ---: | ---: | ---: |
| 2 | 14 | 51 | 24 | 6 | 3 |

NOTE: Detail may not sum to totals because of rounding.
SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 2007 Writing Assessment.

## Sample Eighth-Grade Informative Writing Task

Open the envelope labeled $\mathbf{E}$ that you have been given. Take out the letter from Rina and read it. Rina, who wrote the letter, is coming to a school in America for the first time and needs to know what a backpack is.
Write a letter back to Rind. In your letter, include a clear description of a backpack and explain in detail what she should keep in it. Remember, the more information Rina has, the better prepared she'll be to start eighth grade.

## Range of Eighth-Grade Informative Writing Skills

The item map below illustrates the range of writing ability demonstrated by eighth-graders. For example, students performing near the middle of the Basic range were likely to provide a "Sufficient" response for the Backpack writing task. Students performing near the top of the Proficient range were more likely to provide a
"Skillful" response, and responses rated as "Excellent" were likely to be provided by students performing in the Advanced range. Examples of responses rated as "Uneven" and "Excellent" are presented on the following pages.

GRADE 8 NAEP WRITING ITEM MAP

| Scale <br> score | Rating of responses to <br> Backpack task | Rating criteria |
| :--- | :--- | :--- |

[^8]
## Example of an "Uneven" Response

The response shown on the following page was rated as "Uneven" because, while it does convey some clear information, it also demonstrates a lack of development and breakdowns in organization, moving quickly from thought to thought with little, if any, elaboration: "Every one at my school has a packback. I'm going to tell you what a backpack is." Control over sentence boundaries and structure is unevenat times present, at other times absent: "You will put paper, folders, pens, pencils, books, and more." There are also numerous errors in punctuation, spelling, and usage, some of which may require a reader to hesitate and puzzle over meaning, such as the consistently incorrect use of apostrophes ("for big kid's").
Although 20 percent of the eighth-graders whose responses to the Backpack task were rated as "Uneven" engaged in some prewriting activity, there was no prewriting activity on the planning page for the sample student response presented here. Since scorers did not see students' planning pages, the absence of prewriting activity did not factor into the rating of the response.

The table below shows the percentage of eighthgraders within each achievement level whose responses were rated as "Uneven" or higher. For example, 95 percent of students performing at the Basic level at least were able to write essays that presented some clear information, even if that information was presented in an unevenly organized way, was inconsistently developed, or sometimes exhibited sentence, word choice, or other errors that could interfere with reader understanding.

Percentage rated as "Uneven" or higher for eighth-graders at each achievement level in 2007

| Overall | Below Basic | At Basic | At Proficient | At Advanced |
| ---: | ---: | ---: | ---: | ---: |
| 92 | 49 | 95 | 100 | 100 |

## FOR MORE INFORMATION...

Explore other sample writing tasks and student responses from the 2007 writing assessment at http://nces. ed.gov/nationsreportcard/itmrls.

Dear:Pina
2126107

How are doing? Am great. Every one at my school has a packibach. I'm going to tell you what a backpack is. A backpack is like a purse except you put it in your back. Their's some for like kid's and some for big kids. you need one for the dy kids. In if you would put your school stuff. Some have lots of pockets, and some have very little.rou will put paper, folders, pens, pencils, book's, and more. like you the stuff you used to take to youre school, you will have all that but in a back pack. Hope you get a nice backpack. Nice to meet you.
sencisly:

## Example of an "Excellent" Response

The response shown on the following page was rated as "Excellent" because it is well organized, using descriptive details and transitions to lead the reader from one piece of information to another: "A backpack is a bag with a rounded top + a flat bottom. It unzips around the top to reveal a spacious pouch. In this pouch you might keep...". The response also sustains variety in sentence structure throughout and exhibits good word choices (reveal, vertically, flexible).

The content of the student's planning page shown below illustrates how the student engaged in prewriting activities by creating a list and drawing a picture. The list produced on this planning page contributed to the way information was organized in the student's response. The list of details focusing on the physical description of a backpack was drafted into sentence form during composition.

The table below shows the percentage of eighthgraders within each achievement level whose responses were rated as "Excellent." For example, 4 percent of students performing at the Proficient level were able to write developed and well-organized essays with well-chosen details, using transitions to lead the reader from one part of the essay to another. These students also consistently varied their sentence structure and made good word choices, doing so with minimal errors. Less than 1 percent of the students at the Basic level were able to do so.

Percentage rated as "Excellent" for eighth-graders at each achievement level in 2007

| Overall | Below Basic | At Basic | At Proficient | At Advanced |

Bockpock

Dear Kino.
H!! My name is Kate and I am currently attending the school you will when you reach the united States. 1 m glad you'te excited about starting eighth grade! I dort know what eighth grade is like where you come from. but here it's

My middle school friends and I do keep our
mastic! really fantastic! school work in backpacks. A backpack is a bag with a rounded top + a flat bottom. It un zips around the top to reveal a spacious pouch. in this pouch you might keep a binder with schod papers in it or a textbook. Other than the pouch, on the front of the backpack there may be other small pockets to keep thin. Two straps pencils. pens, or other sm the back of the are attached vertically used for putting your backpack. These are backpack hangs on your arms through so the as are made of a canvas. back. Most backpacks flexible but not like material that is averiety of colors. stretchy. They come in a veriety of backpack I nape my explanation of a back they look helped give you an idea of you when you like. I am excited, in sure yowl enjoy come to America. In sure I have! Maybe eighth grade as much favor by telling the you could return the wore come from. what it's like. Bor

# 12th Grade 

## Twelfth-graders improve

High school seniors demonstrated increased ability to provide information, narrate, and persuade through their writing. As shown in figure 18, the average score of 153 in 2007 was higher than in both previous assessment years. The score increased by 5 points since 2002 and by 3 points compared with 1998.

Figure 18. Trend in twelfth-grade NAEP writing average scores
Scale score

[^9]
## Since 2002, lower- and middle-performing students gain

Twelfth-graders at the 10th, 25 th, and 50 th percentiles scored higher in 2007 than in both previous assessment years (figure 19). There were no significant changes in scores for grade 12 students at the 75th and 90th percentiles compared to 2002. Scores for twelfthgraders at the 75 th percentile increased only in comparison with 1998.

Figure 19. Trend in twelfth-grade NAEP writing percentile scores
Scale score

[^10]Achievement levels provide another way to examine student progress. The percentage of twelfth-graders performing at or above the Basic level increased from 74 percent in 2002 to 82 percent in 2007 and was higher in 2007 than in 1998 (figure 20). There was no significant change in the percentage of students performing at or above Proficient since 2002, but there was a 2 percentage point increase compared with 1998.

Figure 20. Trend in twelfth-grade NAEP writing achievement-level results

* Significantly different ( $p<.05$ ) from 2007. SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998, 2002, and 2007 Writing Assessments.

## Gains since 2002 for White, Black, and Asian/Pacific Islander students

The overall gains made by twelfth-graders in 2007 varied across racial/ethnic groups. White students scored higher in 2007 than in both previous assessment years. Black and Asian/Pacific Islander students scored higher than in 2002, but apparent changes in comparison to 1998 were not statistically significant (figure 21).

Scores for Hispanic and American Indian/Alaska Native students showed no significant change in comparison to previous assessments. Although not shown here, the percentage of Hispanic students performing at or above Basic was higher in 2007 than in both previous assessments even though there was no significant change in their average score.

Figure 21. Trend in twelfth-grade NAEP writing average scores, by race/ethnicity
Scale score

$\ddagger$ Reporting standards not met. Sample size is insufficient to permit a reliable estimate.

* Significantly different ( $p<.05$ ) from 2007.

NOTE: Black includes African American, Hispanic includes Latino, and Pacific Islander includes Native Hawaiian. Race categories exclude Hispanic origin. SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998, 2002, and 2007 Writing Assessments.

## ACHIEVEMENT-LEVEL RESULTS

Information is available on achievement-level results for racial/ethnic groups and other reporting categories at http://nationsreportcard.gov/writing_2007/data.asp.

## No change in score gaps

Significant gaps continue to exist between the writing scores of White students and other racial/ethnic groups. There were no significant changes in score gaps
between White and Black students or White and Hispanic students compared to previous assessment years (figure 22).

Figure 22. Trend in twelfth-grade NAEP writing average scores and score gaps, by selected racial/ethnic groups

* Significantly different ( $p<.05$ ) from 2007.

NOTE: Black includes African American, and Hispanic includes Latino. Race categories exclude Hispanic origin. Score gaps are calculated based on differences between unrounded average scores.

As was seen at grade 8 , the percentage of White twelfth-graders in the population was lower in 2007 than in 2002 and 1998, while the percentage of Hispanic students was higher (table 11). The percentage of Asian/Pacific Islander students was higher in 2007 than in 1998.

Table 11. Percentage of students assessed in twelfth-grade NAEP writing, by race/ethnicity: 1998, 2002, and 2007

| Race/ethnicity | 1998 | 2002 | 2007 |
| :--- | :---: | :---: | :---: |
| White | $72^{*}$ | $70^{*}$ | 64 |
| Black | 14 | 13 | 15 |
| Hispanic | $10^{*}$ | $10^{*}$ | 14 |
| Asian/Pacific <br> Islander | $4^{*}$ | 5 | 5 |
| American Indian/ <br> Alaska Native | $\#$ | $\ddagger$ | 1 |

\# Rounds to zero.
$\ddagger$ Reporting standards not met. Sample size is insufficient to permit a reliable estimate. * Significantly different ( $p<.05$ ) from 2007

NOTE: Black includes African American, Hispanic includes Latino, and Pacific Islander includes Native Hawaiian. Race categories exclude Hispanic origin. Detail may not sum to totals because results are not shown for the unclassified race/ethnicity category. SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998, 2002, and 2007 Writing Assessments.

## Females outscore males

Female students continue to score higher on average than their male counterparts. Although narrower than in 2002, the 18-point score gap in 2007 was not significantly different from the gap in the initial assessment year (figure 23). Male students, however, increased their score in 2007; results show an 8-point increase since 2002 and a 4-point increase compared with 1998 . The average score for female students showed no significant change since 2002 but was 3 points higher than in 1998.

Although not shown here, there was no significant change in the percentage of male students performing at Advanced, while the percentage of female students at Advanced decreased from 3 percent in 2002 to 1 percent in 2007. Achievement-level results by gender are available at http://nationsreportcard.gov/writing_2007/ data.asp.

Figure 23. Trend in twelfth-grade NAEP writing average scores and score gaps, by gender

Scale score

* Significantly different ( $p<.05$ ) from 2007.

NOTE: Score gaps are calculated based on differences between unrounded average scores.
SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1998, 2002, and 2007 Writing Assessments.

## Public school students improve

Ninety percent of twelfth-graders attended public schools in 2007. Although participation rates were not high enough to produce reliable estimates of students' performance in 2007 for private schools as a whole, results were available for students who attended Catholic schools. On average, twelfth-graders in Catholic schools scored 15 points higher than their peers in public schools in 2007 (table 12).

While the average writing score for public school students was higher in 2007 than in previous assessments, there was no significant change in the score for Catholic school students compared to the results in 1998.

Table 12. Average scores in twelfth-grade NAEP writing, by type of school: 1998, 2002, and 2007

| Type of school | 1998 | 2002 | 2007 |
| :--- | :---: | :---: | :---: |
| Public | $148^{*}$ | $146^{*}$ | 152 |
| Catholic | 167 | $\ddagger$ | 167 |

$\ddagger$ Reporting standards not met. Sample size is insufficient to permit a reliable estimate.

* Significantly different ( $p<.05$ ) from 2007.

## Higher scores for students with higher parental education

Twelfth-graders who reported higher levels of parental education scored higher on the 2007 writing assessment than students who reported lower levels of parental education. Students who reported that at least one parent graduated from college scored 29 points higher on average than students whose parents did not finish high school and 11 points higher than students with a parent who had some education after high school (figure 24).

Scores were higher in 2007 than in 2002 for most of the student-reported parental education levels. Only the score for students who reported at least one parent graduated from high school as the highest level showed no significant change from 2002 to 2007.

Figure 24. Average scores in twelfth-grade NAEP writing, by highest level of parental education: 2002 and 2007
Scale score

[^11]
## Assessment Content at Grade 12

All three purposes for writing—narrative, informative, and persuasivewere assessed at grade 12, with the greatest proportion of tasks measuring persuasive writing and the fewest tasks measuring narrative writing. The 2007 twelfth-grade writing assessment included 20 writing tasks (5 narrative, 7 informative, and 8 persuasive). A copy of the planning brochure given to twelfth-graders is presented below.

## Grade 12 Student Brochure on Planning and Reviewing Writing

Ideas for Planning Your Writing
To plan and organize your writing. you could do one or more of the following:

Brainstorm
List lots of ideas related to your topic: then choose which ones you want to use.

Imagine Imagine talking about your topic with someone to sort out your ideas.

## Draw

Draw a picture or a diagram of your topic ar your ideas.
Web
Organize your thoughts by drawing lines between ideas to connect them.

## Outline

Organize your ideas into main points and subpoints.

Ideas for Reviewing Your Writing
To review what you have written, you could think about the following:

Purpose
Have I said what I want to say about the topic?
Development Do I need to develop my ideas by adding details or do I need to take out some details?

Organization Are the sections of my writing clearly connected and in the right order?

## Clarity

Will my audience understand what I wrote?

Correctness
Have I checked for correctness in

- grammar?
- punctuation?
- spelling?

## Writing Achievement Levels at Grade 12

The following achievement-level descriptions for grade 12 writing are applied to first drafts that students are expected to generate within the limited time constraints in a large-scale assessment environment, and not to final or polished student writing. The cut score depicting the lowest score representative of that level is noted in parentheses.

Basic (122): Twelfth-grade students performing at the Basic level should be able to produce an effective response within the time allowed that shows an understanding of both the writing task they have been assigned and the audience they are expected to address. Their writing should show some analytical, evaluative, or creative thinking. It should include details that support and develop the central idea of the piece, and it should be clearly organized, making use of techniques such as a consistency in topic or theme, sequencing, and a clear introduction and conclusion. The grammar, spelling, punctuation, and capitalization in these students' work should be accurate enough to communicate to a reader; there may be some errors, but these should not get in the way of meaning.

Proficient (178): Twelfth-grade students performing at the Proficient level should be able to produce an effective and fully developed response within the time allowed that uses analytical, evaluative, or creative thinking. Their writing should be organized effectively, and it should show that these students have a clear understanding of the writing task they have been assigned. It should be coherent, making use of techniques such as a consistent theme, sequencing, and a clear introduction and conclusion, and
it should include details and elaboration that support and develop the main idea of the piece. The writing should show that these students are able to use precise language and variety in sentence structure to engage the audience they are expected to address. Writing by 12th-grade students performing at the Proficient level should contain few errors in grammar, spelling, punctuation, capitalization, and sentence structure. These writers should demonstrate a command of these elements and may use them for stylistic effect in their work.

Advanced (230): Twelfth-grade students performing at the Advanced level should be able to produce a mature and sophisticated response within the time allowed that uses analytical, evaluative, or creative thinking. Their writing should be fully developed, incorporating details and elaboration that support and extend the main idea of the piece. It should show that these students can use literary strategies - anecdotes and repetition, for example - to develop their ideas. At the same time, the writing should be well crafted, organized, and coherent, and it should incorporate techniques such as consistency in topic or theme, sequencing, and a clear introduction and conclusion. It should show that these writers can engage the audience they are expected to address through rich and compelling language, precise word choice, and variety in sentence structure. Writing by 12 th-grade students performing at the Advanced level should contain few errors in grammar, spelling, punctuation, capitalization, and sentence structure. These writers should demonstrate a sophisticated command of these elements and may use them for stylistic effect in their work.

## Persuasive Writing at Grade 12

Persuasive writing is focused on the reader because it is intended to influence people to think about a particular topic or issue in a certain way. For the task below, students were required to make an argument about whether big inventions, such as computers, are more important in their daily lives than inventions like pencils. The advantage of the task is that it gave students the opportunity to present views on something about which they are likely to know a good deal and may have clear opinions, given their own use of new technologies.

Sixty percent of twelfth-graders received a rating of "Sufficient" or higher on their responses to this writing task.

Percentage of twelfth-grade students at each rating level in 2007

| Excellent | Skillful | Sufficient | Uneven | Insufficient | Unsatisfactory |
| ---: | ---: | ---: | ---: | ---: | ---: |
| 5 | 21 | 34 | 27 | 9 | 3 |

NOTE: Detail may not sum to totals because of rounding.

## Sample of Twelfth-Grade Persuasive Writing Task

The twentieth century has given us inventions that have changed our lives in many ways. Big inventions, like television, computers, or microwave ovens, have had such a great impact on our culture that they seem to overshadow the small ones, like ballpoint pens, headphones, or calculators.

Write an essay in which you choose whether the "big" inventions or the "small" ones play a more important role in your daily life and provide reasons to support your position. You may use the examples of inventions given above or come up with some of your own. Give as many examples as you feel necessary to support your position.

## Range of Twelfth-Grade Persuasive Writing Skills

| Scale |

110
100
90
80
70
75 "Insufficient" argument about the importance of an invention

Students writing at the UNEVEN level wrote essays in which they took a position, but their attempts to develop and/or support that position were uneven, characterized by one or more flaws, including a lack of development, repetition of ideas, breakdowns in organization, uneven control over sentence boundaries and word use, and errors that at times interfered with reader understanding.

Students writing at the INSUFFICIENT level wrote essays in which they took a position, but their attempts to develop and/or support that position were characterized by one or more flaws, including very disorganized or unfocused development, minimal control over sentence boundaries and word use, and errors that often interfered with reader understanding.

NOTE: The sample grade 12 writing task in the 2007 writing assessment was mapped onto the NAEP 0-300 writing scale. The map shows, for each level on the scoring guide from "Insufficient" through "Excellent," the scale score attained by students who had a 65 percent probability of attaining that level or higher for the selected task. Scale score ranges for writing achievement levels are referenced on the map.
SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 2007 Writing Assessment.

## Example of an "Uneven" Response

The response shown on the following page was rated as "Uneven" because, while it takes a clear position, its attempt to support that position is uneven in terms of development and organization. The response offers only minimal support for the idea that the small inventions are more important ("I write everyday and listen to music"), moves immediately into a tangentially related argument about how bigger inventions make people lazy, and concludes with a new and undeveloped idea about computer use. Further, grammatical errors, such as misused prepositions ("on my personal daily life") and lack of subject-verb agreement, sometimes interfere with comprehension.
The content of the student's planning page shown below illustrates how the student engaged in prewriting activities by creating two lists: one of big inventions and one of small inventions. Although there is evidence that some of the elements from the planning page were utilized, the response was marked with several notable errors and lapses in continuity
throughout. Only the student's completed response was considered in the rating process.

The table below shows the percentage of twelfth-graders within each achievement level whose responses were rated as "Uneven" or higher. For example, 93 percent of students performing at the Basic level at least were able to write essays that took a clear position, even if support for that position was inconsistently developed, repetitive, or sometimes exhibited sentence, word choice, or other errors that could interfere with reader understanding.

Percentage rated as "Uneven" or higher for twelfth-graders at each achievement level in 2007

| Overall | Below Basic | At Basic | At Proficient | At Advanced |
| ---: | ---: | ---: | ---: | ---: |
| 87 | 52 | 93 | 100 | $\ddagger$ |

Throught the $20^{\text {in }}$ century manly inventions rave been gwen to us. Some by lice the microwave, television and computer and sone small lice the pen, calculator and readphoves. The ores that affect me mostly on mu personal daily life basis would be then to music. I write evemday and listen larger inventions in my opinion the made people so lazy; are what has made 4 ide 4 Hay at instead of going outside the telision. Mistead nome and watch the just pes of cooling meals the mice wave. I some thing in the miceram to to do usually go to dent thane computers research. I dory. So in my life it's that vecesarin. objects that are necessary,
the small ole. the small wig os.

## Example of an "Excellent" Response

The response shown on the following page was rated as "Excellent" because it is focused and well organized. The position that the larger inventions are more important in the student's life is clearly stated and consistently supported. The response begins with a welldeveloped section about the utility of the Internet and then moves into an argument about the convenience and environmental virtues of fuel-efficient cars. The response uses contrast effectively to make its point ("Once, a student had to spend hours searching through books for a research paper. Now it takes..."), and demonstrates consistently varied sentence structure and good word choices. Errors are minimal.

The content of the student's planning page shown below illustrates how the student engaged in prewriting activities by creating three lists: one of big inventions, one of small inventions, and one of inventions followed by ideas. It is notable that this third list produced during planning contributed to the shaping of information in the student's response.

The table below shows the percentage of twelfthgraders within each achievement level whose responses were rated as "Excellent." For example, 15 percent of students performing at the Proficient level were able to write well-organized essays in which they took clear positions and consistently supported those positions, using transitions to lead the reader from one part of the essay to another. These students also consistently varied their sentence structure and made good word choices, doing so with minimal errors.

Percentage rated as "Excellent" for twelfthgraders at each achievement level in 2007

Although many twentieth century inventions, such as the interne important role in vehicles, play a more importers my lure.

The internet has opened up a world of educothonal research, stress releasing games, and the ability to keep in touch coith Far away friends, or make pew friends from other countries Once, a student had to spend hours searching through books for a research paper. Now it tails only mincetes to ales a hundred thousand credible websites on any given subject. The internet has unlashed endless possibilities, both social and educational

Automobiles have been around for a very long time. Recently, however, advanus in automobile technology have sky rocketed, and made life much easier for myself and offers. Mere Fuel efficient cars mean that I can Full my tank less offer, and drive farther using less Fuel with gas climbing to incredible prices and many students working For minimum wage. Free exticient cars are a Financial blessing

Not only are cars more Fuel experiment these days, they are also my generation so is a major concern for hons and the now stiffer emissions inspection on fossil puls are Hybrid cars that don't Fur for me and for the. - important in environment.
while smaller inumitions are inventions that their con ways, 6 t the line. Without the internat or preside over my daily life. vehicles, lite would be safer, cleaner, less expense

## Technical Notes

## Sampling and Weighting

The nationally representative sample of eighth-graders assessed in 2007 consisted of the combined sample of public school students assessed in each participating state and urban school district, plus an additional sample of students from states for which results are not reported separately and students in nonpublic schools (i.e., private, Bureau of Indian Education, and Department of Defense schools). Grade 8 state- and district-level results reflect the performance of public school students only.

The national sample for grade 12 was chosen using a multistage design that involved drawing students from the sampled public and nonpublic schools across the country. Within each grade, the results from the assessed students are combined to provide accurate estimates of the overall performance of students in the nation and, for grade 8 , the performance of public school students in participating states and districts. More information on sampling can be found at http:// nces.ed.gov/nationsreportcard/about/nathow.asp.

Each school that participated in the assessment, and each student assessed, represents a portion of the population of interest. Results are weighted to make appropriate inferences between the student samples and the respective populations from which they are drawn. Sampling weights are adjusted for the disproportionate representation of some groups in the selected sample. This includes oversampling of schools with high concentrations of students from certain minority groups and the lower sampling rates of students who attend very small nonpublic schools.

## Interpreting Statistical Significance

Comparisons over time or between groups are based on statistical tests that consider both the size of the differences and the standard errors of the two statistics being compared. Standard errors are margins of error, and estimates based on smaller groups are likely to have larger margins of error. The size of the standard errors may also be influenced by other factors such as how representative the students assessed are of the entire population.

When an estimate has a large standard error, a numerical difference that seems large may not be statistically significant. Differences of the same magnitude may or may not be statistically significant depending upon the size of the standard errors of the estimates. For example, a 6-point change in the average score for Black students may be statistically significant, while a 6-point change over the same period for American Indian/Alaska Native students may not be. Standard errors for the estimates presented in this report are available at http://nces.ed.gov/ nationsreportcard/nde.

## School and Student Participation Rates

To ensure unbiased samples, NCES and the Governing Board established participation rate standards that states and jurisdictions were required to meet in order for their results to be reported. Participation rates for the original school sample at each grade needed to be at least 85 percent to meet reporting requirements. Forty-five states, Department of Defense Schools, and 10 urban districts participating in the 2007 eighth-grade writing assessment met participation rate standards.

The weighted national school participation rates for public and private schools combined were 97 percent for grade 8 and 89 percent for grade 12. Student participation rates were 92 percent for grade 8 and 80 percent for grade 12.

Participation rates needed to be 70 percent or higher to report results separately for private schools. While the school participation rate for private schools met the standard for grade 8 in 2007, it fell below the standard for grade 8 in 2002 and for all three assessment years at grade 12 . Therefore, the only comparison that could be made for private school students was between 1998 and 2007 at grade 8. Participation rates for Catholic schools, however, were sufficient for reporting in 2007 at both grades ( 89 percent at grade 8 and 82 percent at grade 12) and in the two previous assessment years, with the exception of 2002 for grade 12.

Because the response rate for twelfth-grade public school students fell below the standard of 85 percent, an analysis of the potential bias introduced by student nonresponse was conducted. Compared to the distribution of all eligible students, the distribution of the weighted student sample did not differ with respect to sex, race/ethnicity, relative age, eligibility for free or reduced-price school lunch, students with disabilities, or English language learners. After weight adjustments were made to account for differences in the response rates by subgroups, the weighted percentage of English language learners was higher in the sample than among all eligible students, but the potential effect on survey estimates was very slight.

The private school response rate at grade 12 was 63 percent in 2007. A nonresponse bias analysis compared the characteristics of participating schools to all eligible schools following school substitution and then
following the application of weight adjustments to account for school nonresponse. In each analysis, the characteristics examined included census region, private school reporting group, school location, and estimated grade enrollment. In addition, mean values of race/ ethnicity percentages and enrollment were compared. Substitution and weight adjustments appear to have reduced the potential bias associated with all of the factors examined except race/ethnicity. The only significant result for race/ethnicity was the percentage of Hispanic students, for which the relative bias was 18 percent.

## National School Lunch Program

NAEP first began collecting data in 1996 on student eligibility for the National School Lunch Program (NSLP) as an indicator of poverty. Under the guidelines of NSLP, children from families with incomes below 130 percent of the poverty level are eligible for free meals. Those from families with incomes between 130 and 185 percent of the poverty level are eligible for reducedprice meals. (For the period July 1, 2006 through June 30, 2007, for a family of four, 130 percent of the poverty level was $\$ 26,000$, and 185 percent was $\$ 37,000$.)

As a result of improvements in the quality of the data on students' eligibility for NSLP, the percentage of students for whom information was not available has decreased in comparison to the percentages reported in earlier assessments. Therefore, comparisons to results in previous years are not included in this report. For more information on NSLP, visit http://www.fns.usda.gov/cnd/ lunch/.

## Highest Level of Parental Education

Students who participated in the NAEP writing assessment were asked to indicate the highest level of education they thought each of their parents had completed. Four levels of education were identified: did not finish high school, graduated from high school, some education after high school, and graduated from college. Students could also choose the response, "I don't know." The highest level of education reported for either parent was used in the analysis of this question.

Similar information was collected in the 1998 writing assessment; however, because the format of the question was different, the results from 1998 cannot be compared to those in 2002 and 2007.

## Appendix Tables

Table A-1. Eighth- and twelfth-grade public and nonpublic school students with disabilities (SD) and/or English language learners (ELL) identified, excluded, and assessed in NAEP writing, as a percentage of all students: 1998, 2002, and 2007

## HOW TO READ THIS TABLE...

The data presented in this table show the percentages of students in racial/ethnic groups identified as students with disabilities and/or English language learners, excluded, and assessed in 2007. For example, 25 percent of Hispanic eighth-graders were identified as English language learners in 2007, of which 4 percent were excluded from the writing assessment and 22 percent were assessed.

Table A-3. Eighth-grade public school students with disabilities (SD) and English language learners (ELL) identified, excluded, and accommodated in NAEP writing, as a percentage of all students, by state: 2007

| State/jurisdiction | Overall excluded | SD |  |  | ELL |  |  |

## U.S. DEPARTMENT OF EDUCATION

The National Assessment of Educational Progress (NAEP) is a congressionally authorized project sponsored by the U.S. Department of Education. The National Center for Education Statistics, a department within the Institute of Education Sciences, administers NAEP. The Commissioner of Education Statistics is responsible by law for carrying out the NAEP project.

## THE NATIONAL ASSESSMENT GOVERNING BOARD

In 1988, Congress created the National Assessment Governing Board to set policy for the National Assessment of Educational Progress, commonly known as The Nation's Report Card ${ }^{\mathrm{TM}}$. The Governing Board is an independent, bipartisan group whose members include governors, state legislators, local and state school officials, educators, business representatives, and members of the general public.
