

FAST FACTS ENERGY STAR® Residential Light Fixtures

ENERGY STAR® residential light fixtures save you money.

ENERGY STAR labeled light fixtures use 50 -70 percent less energy than incandescent or halogen lamps, but give the same amount of light. An ENERGY STAR labeled light fixture may cost more than conventional incandescent or halogen fixtures, but energy savings and lower monthly utility bills more than offset the initial purchase price.

ENERGY STAR residential light fixtures are safe.

These fixtures typically burn at less than 100 degrees Fahrenheit. Halogen torchieres can reach up to 1,000 degrees F and are potential fire hazards.

ENERGY STAR residential light fixtures are good for the environment.

They use less energy to do the same work as products that do not bear the ENERGY STAR label. Electricity production is a major cause of air pollution and has been linked to global climate change. The less energy we use, the more pollution we prevent.

ENERGY STAR residential light fixtures meet or exceed energy efficiency and quality guidelines.

Most are dedicated light fixtures designed to operate an energy-efficient light source, such as pin-based fluorescent lamps.

ENERGY STAR residential light fixtures are available in a full range of styles, colors, sizes, and designs from many manufacturers.

Available fixtures include table lamps, torchieres, ceiling fixtures, wall sconces, work-space lighting, and security lighting. They can be used for indoor, outdoor, portable, and hardwired home lighting.

ENERGY STAR residential light fixtures blend easily with your decor.

They look the same as conventional incandescent fixtures. They provide bright light with good color rendering and have no flicker or hum.

ENERGY STAR residential lighting fixtures are easy to find.

The colorful ENERGY STAR label, jointly managed by the United States Department of Energy (DOE) and the United States Environmental Protection Agency (EPA), helps consumers quickly and easily identify light fixtures and other products that save energy.
