

GSA Office of Governmentwide Policy

Federal Fleet Report, Fiscal Year 2007

January 31, 2008

Dear Reader:

We are pleased to present the Federal Fleet Report for Fiscal Year 2007.

The Federal Fleet Report is produced through the Federal Automotive Statistical Tool (FAST), an Internet-based application that collects fleet-related data from Federal executive agencies. FAST satisfies several distinct but overlapping reporting requirements for several different parties:

Federal Fleet Report.....General Services Administration
Energy Policy Act Compliance.....Department of Energy
Federal AFV Location Reporting.....Energy Information Administration
Agency Fleet Budget Reporting.....Office of Management and Budget

By utilizing the FAST database for all of these reporting requirements we ensure that information reported and published is consistent while reducing the reporting workload on the agencies. FAST also permits much speedier production of reports and availability of useful information for managers and policymakers.

Copies of this and previous reports are available at the GSA website at <http://www.gsa.gov/vehiclepolicy> and the FAST website at <https://fastweb.inel.gov/>. If you have any questions about this report or would like to offer comments or suggestions on its contents, please contact us at vehicle.policy@gsa.gov.

We trust that this year's report will be of value to you.

Janet C. Dobbs
Director, Center for Policy Evaluation
Office of Travel, Transportation, and Asset Management
Office of Governmentwide Policy
U.S. General Services Administration

Executive Summary

Overview

Federal departments, agencies, and their contractors use motor vehicles to perform their missions. These vehicles, totaling more than 642,000 for Fiscal Year 2007, are obtained from three primary sources: agency purchase, lease from the GSA Fleet Program, or commercial lease. This report presents inventory, utilization, costs, and fuel use associated with the Federal motor vehicle fleet. The data in this report are summarized by:

- Overall Federal Fleet Profiles
- Inventory
- Cost
- Utilization
- Fuel

The data are also displayed by vehicle type, and in some instances, by location (foreign vs. domestic). Overviews of tabular data are also displayed in graphical charts for the current year and 5-year trends.

Privately-owned motor vehicles used by Federal employees on official business are not included in the Federal Fleet Report, nor are short-term commercial rental vehicles (used less than 60 continuous days).

Background

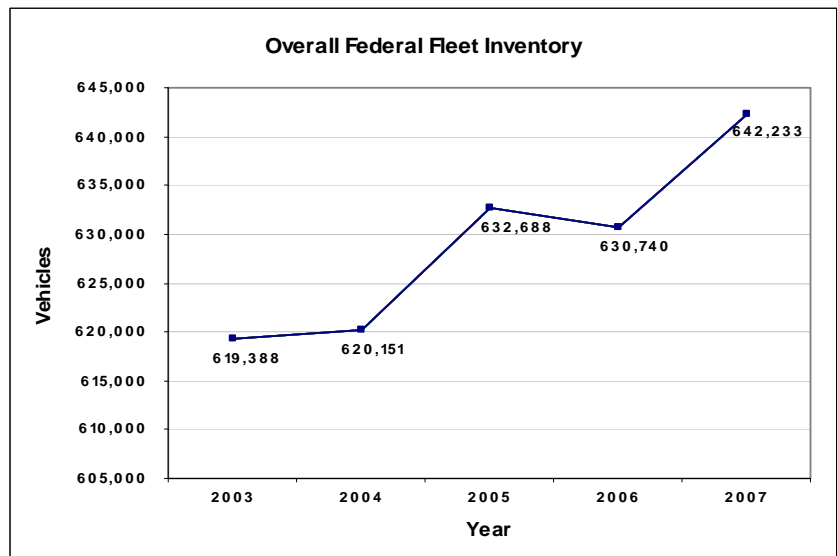

The report summarizes statistical data by passenger-carrying vehicles, trucks, and all other vehicle types. Data are further summarized by characterizing each agency’s vehicles by civilian, military and U.S. Postal Service, and in some instances, by vehicle source and location (domestic vs. foreign). Vehicle types identified in the report include:

- Sedans and station wagons
- Passenger vans
- Sport utility vehicles
- Light trucks (4x2 and 4x4)
- Medium trucks
- Heavy trucks
- Ambulances
- Buses

Major Federal Fleet Trends

Worldwide Motor Vehicle Inventory

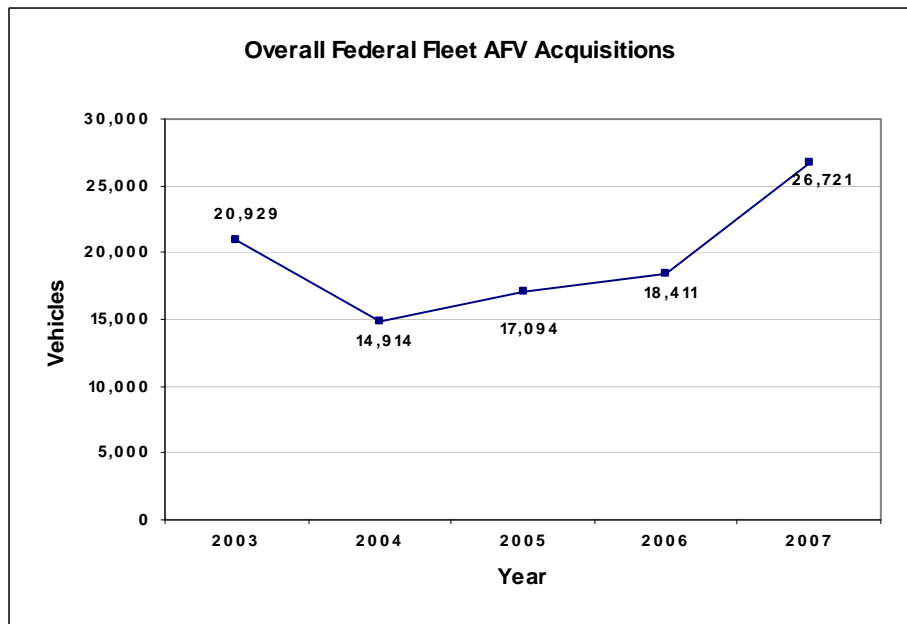

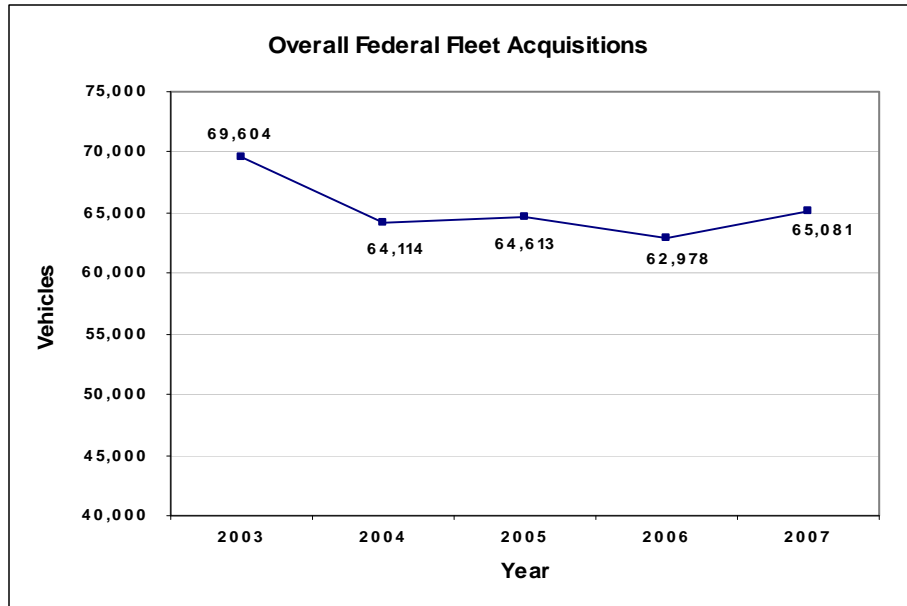

The Federal Government’s worldwide fleet grew by a substantial 1.8 percent in Fiscal Year 2007. The military led with 2.9 percent, followed by the Postal Service (1.7 percent) and the rest of the civilian agencies (1.1 percent). The reasons for this are not clear. Some fluctuation from year to year is normal, and may simply reflect the timing of vehicle acquisitions and disposals, but a change of this magnitude suggests real growth. This follows a year of significant decline in the military fleets.

Motor Vehicle Acquisitions

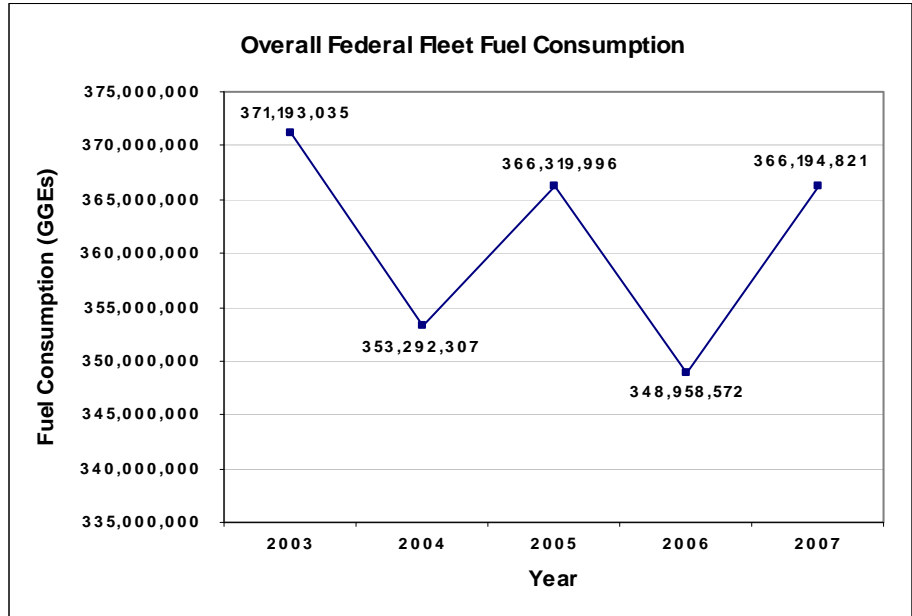

These two graphs depict vehicle acquisitions in general and acquisition of alternative fuel vehicles in particular. Overall acquisitions were again stable, with an unremarkable increase of just 3.3 percent reflecting normal year-to-year variation. Acquisition of gasoline-fueled vehicles declined again, continuing a trend begun in 2004. Whereas in previous years diesel and alternative fuel vehicle acquisitions constituted the growth sector in new acquisitions, in 2007 diesel acquisitions actually declined. This is probably a result of new emissions standards increasing the cost of acquiring diesel engine vehicles. Federal agencies have turned to E85 flex-fuel vehicles to meet AFV acquisition targets, operating many of them on gasoline because of the lack of AFV infrastructure. This will present difficulties now that there are also requirements for actually using alternative fuel in flex-fuel vehicles.

The recent trend away from sedans toward SUVs appears to have leveled off. This may be due to the combined pressure of rising fuel prices and acquisition costs for these large, fuel-inefficient vehicles. Many agencies have reported strengthening their internal review of SUV acquisitions. However, a new movement from compact to midsize sedans appears to have taken its place this year. This reflects acquisitions of E-85 sedans available only as midsize, and an anomalous situation where contract prices for midsize sedans were lower than those for compacts.

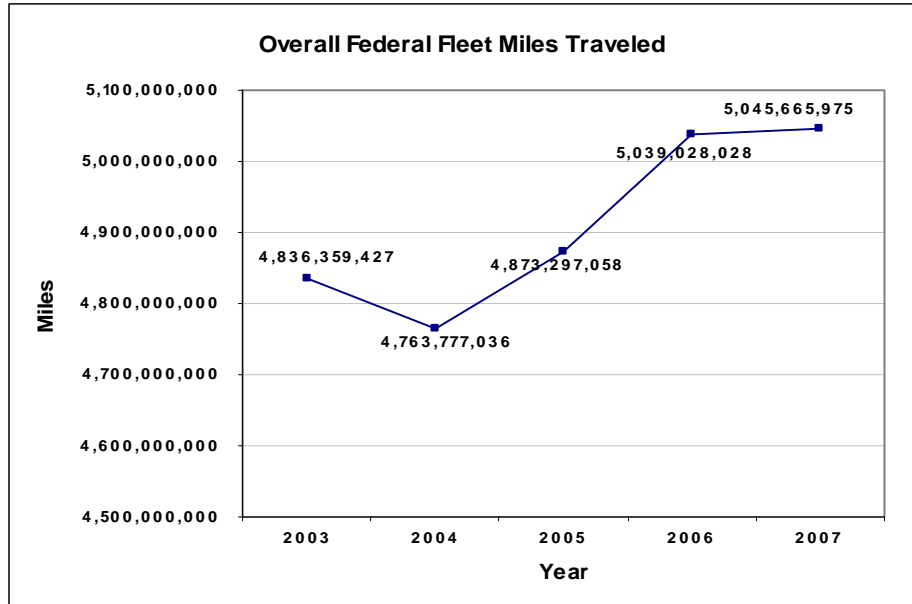

Total Fuel Consumption

The dramatic reduction in fuel consumption of 2006 was almost exactly reversed in 2007. Ordinarily one might assume a simple correspondence with the increase in inventory, but the nearly unchanged miles traveled (below) does not support this assumption. Rather, the scattered, trend-defying data reported probably simply reflect many agencies' continuing difficulties collecting and reporting accurate fuel consumption data. More work is needed to ensure that accurate data are incorporated in charge card purchasing processes as well as agencies' fleet management information systems.

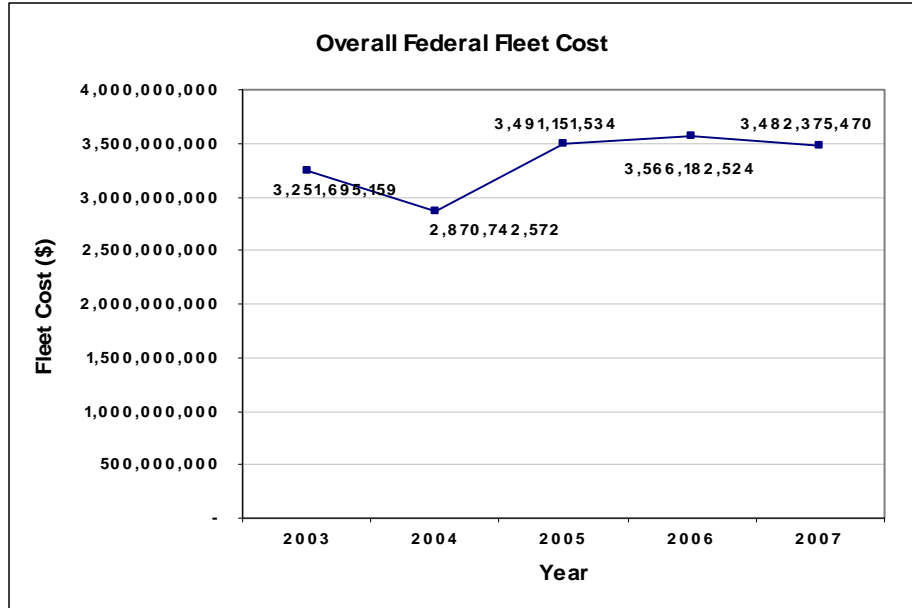

Worldwide Miles Traveled

Miles traveled was almost perfectly flat from 2006 to 2007, despite the substantial increase seen in overall inventory. This could show real growth, or may simply reflect differences in the timing of vehicle acquisitions and disposals. For military agencies, the 2007 expansion follows a year of contraction in 2006, so these changes could well be an unusually large example of normal inventory fluctuations. Hopefully next year's data will determine whether this was a one-time anomaly or a trend.

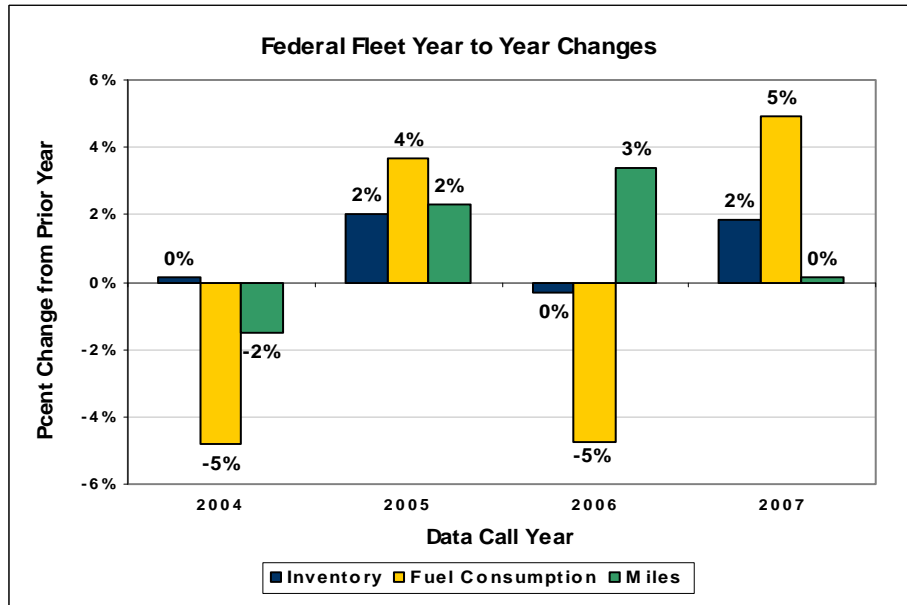

Worldwide Operating Costs

Like worldwide miles, operating cost was almost perfectly flat, even declining slightly. This corresponds with recent trends in fuel prices. Since fuel is the principal driver of cost fluctuations, and fuel consumption is directly dependent upon miles traveled, these data are what one would expect.

FAST Data Trends

Where one expects to observe inventory, fuel consumption, and miles traveled moving in concert, we see in 2007 another significant disparity. We have already identified fuel consumption as the outlier here. Inventory and miles are easier to measure and come from internal sources, where fuel use depends at least in part on external data providers that may or may not be dependable.

This suggests that continued effort is needed to ensure the reliability of data provided by, primarily, the fuel charge card companies. The problems with fuel coding reliability from service station purchase to final transaction reporting are well known and of long standing, and attempts to address them have not been successful.

Other Items of Note

In previous years agencies that failed to report for any reason were deleted from the data tables. This year, to avoid formatting problems and ensure consistency from year to year, such agencies are displayed with blanks in the data fields. (Note that the Library of Congress, which did not report this year, is not an Executive branch agency and is therefore not technically required to.)

Section 1: Overall Fleet Profiles

Section 1 provides a high-level look at the worldwide Federal fleet. It contains tables that cover inventory, cost, utilization, and fuel consumption. Each succeeding section provides more detailed tables, charts, and graphs on these areas. Section 1 ends with a table that summarizes each area in one comprehensive view.

Section 2: Inventory

This section provides additional information to supplement Table 1-1. In addition to end-of-year inventory, it also provides 5-year trend charts, as well as information on where agencies acquire their vehicles (purchase, commercial lease, or GSA Fleet lease).

Passenger vehicles and trucks are broken down into their constituent vehicle types, as are law enforcement vehicles. Again, the passenger vehicle category now includes vehicles other than sedans and station wagons that are used primarily or exclusively to transport passengers, such as passenger vans and sport utility vehicles (SUVs).

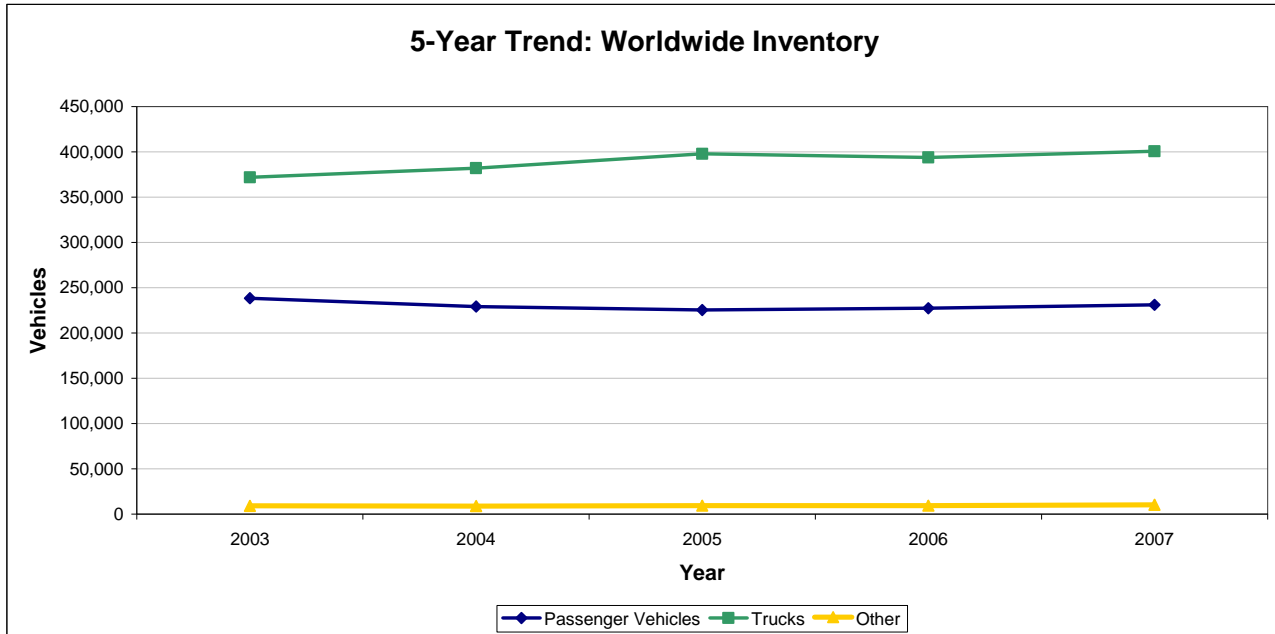

The division between light duty and medium duty for SUVs and passenger vans is a gross vehicle weight rating (GVWR) of 8,500 pounds, as specified in the Clean Air Act and the Energy Policy Act.

Charts 2-7, 2-8 and Tables 2-7 and 2-8 show the federal inventory of law enforcement vehicles. It should be noted that this category is intended to reflect only vehicles with actual law enforcement missions; it does not reflect administrative-use vehicles used by agencies with a law enforcement mission.

*These data come from GSA's Automotive Division. Procurements by GSA's Automotive Division capture most, but not all, Federal executive vehicle procurements. Agencies are sometimes granted waivers to conduct their own procurements. Also, GSA reports procurement actions in terms of orders placed, not shipments or deliveries made, so these figures will not necessarily match new acquisitions as reported by agencies in the FAST system.

* These are agency-owned vehicles only, not commercially leased or GSA Fleet vehicles.

Section 3: Cost

Section 3 expands on the information provided in Table 1-2. FAST began collecting new types of cost data for FY 2004. For example, many agencies do not account for depreciation of fleet assets, so in prior years the depreciation expense reported by GSA Fleet (expressed as a cost per mile by vehicle type) was attributed to other agencies (excepting the U.S. Postal Service, which does account for depreciation). Beginning in FY 2004, all agencies are required to report vehicle depreciation as a separate expense.

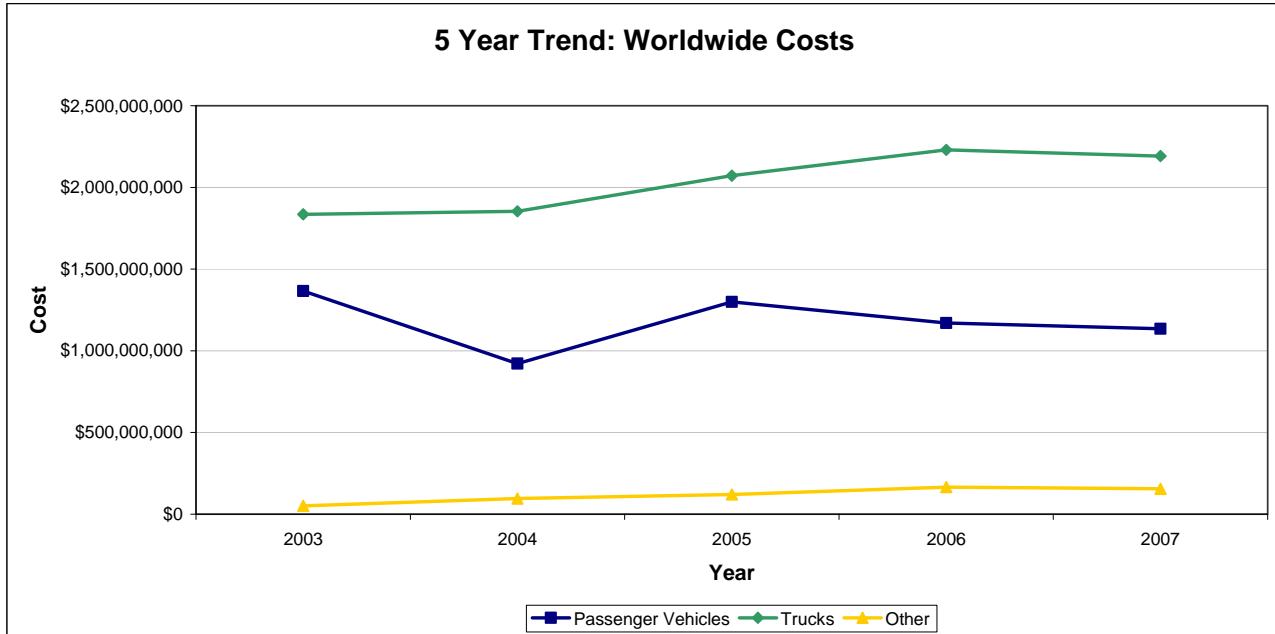

Other costs collected and represented in this section include fuel, maintenance, indirect costs, commercial lease cost and GSA lease cost. Maintenance includes the cost of maintaining and repairing vehicles, including maintenance personnel, parts, supplies, and equipment. Indirect costs include management and overhead personnel, office supplies, building and utility costs, and any other costs that cannot be directly attributed to the operation or maintenance of vehicles. Commercial lease cost includes the lease charges paid to commercial leasing companies. GSA Lease cost is the total amount billed by GSA Fleet to its customer agencies, which includes fuel. Fuel costs for agency owned and commercially leased vehicles are not collected by vehicle type and are therefore shown as a single cost item in the Totals section in Table 3-2. All costs in this report are shown in U.S. Dollars.

This section also reveals some of the inconsistencies in the data that the agencies have reported through FAST. In some cases, it may not be possible to calculate the cost per mile, or miles per vehicle using the raw data from other tables in the report. The inconsistencies arise from agencies who have reported inventory and cost, but no miles, or miles, but no costs for certain vehicle types. In these situations, the data rows in the miles per vehicle and cost per mile tables for that agency and vehicle type will be blank.

Section 3: Cost

Chart 3-5: Cost Per Mile – GSA Fleet*

Cost Per Mile by Year					
Vehicle Type	2003	2004	2005	2006	2007
Passenger Vehicles	\$ 0.4101	\$ 0.3453	\$ 0.5197	\$ 0.3941	\$ 0.4339
Trucks	\$ 0.4604	\$ 0.5572	\$ 0.5996	\$ 0.6161	\$ 0.6706
Other	\$ 0.4788	\$ 1.0965	\$ 0.7132	\$ 1.2514	\$ 1.3440
Overall	\$ 0.4248	\$ 0.4290	\$ 0.5515	\$ 0.4870	\$ 0.5280

*The reported cost of GSA Fleet vehicles was divided by the reported miles traveled by those vehicles to produce this table. The costs shown here may not correspond to the cost per mile claimed by GSA Fleet for its overall fleet operations. This chart shows a significant discontinuity for the "Other" vehicles category (comprised of ambulances and buses) for FY2003 and FY2004. As additional cost detail for the GSA-leased portion of the Federal fleet has become available during those years, GSA Fleet has adapted the method by which the costs for individual vehicles are tracked and then summarized for use by the agencies in submitting data to FAST. We believe the FY2003 cost per mile drop shown on this chart is strictly a function of the method GSA Fleet used to calculate those costs, does not reflect an actual drop in costs, and has been resolved with the methodology now employed.
