Subject: Revised ENERGY STAR Imaging Equipment TEC Test Procedure, Clarified
Attachments: TEC Data Worksheet.xls; Revised Draft TEC TP.pdf; Revised TEC TP Rationale.pdf; IE Test Conditions.pdf

This message is being sent to you on behalf of EPA and DOE's ENERGY STAR® program.

Dear ENERGY STAR Imaging Equipment Stakeholder:

On February 2, 2005, EPA distributed a revised Draft TEC Test Procedure for Imaging Equipment products for review and consideration. Since that distribution, EPA has received feedback suggesting that certain aspects of these documents were either incorrect or unclear. In response, please find attached updated version of these materials. **Please replace the files you received on February 2 with the attached versions.** Specific changes that are included in these files from the files distributed on February 2 are highlighted below:

- A correction was made to the formulas for Daily Sleep Energy and Daily Auto-off Energy on page 5 of the Revised Draft Test Procedure as well as to the combined formulas on page 10 of the Revised Draft Test Procedure Rationale;
- A correction was made to the formula for Adjusted TEC on page 6 of the Revised Draft Test Procedure;
- Additional clarification was added to Step 1 in Table 2 and to Steps 2 and 4 in Table 3;
- An additional illustration of the assumed TEC operating pattern was added to page 8 of the Revised Draft Test Procedure Rationale;
- A second voltage/frequency combination for North America was added to page 1 of the Test Conditions and Equipment document as well as to page 11 of the Revised Draft Test Procedure Rationale; and
- Additional language was added to the TEC Data Collection Spreadsheet to collect Serial/Parallel capability of color machines and DFE and/or print controller functionality.

Please reply to this message if you have any difficulties accessing the attached files. Thank you!
