

must be defined in Version 1.0 IE specification.

External Digital Front Ends (DFE), and additional cordless handsets must meet ENERGY STAR® criteria.

Typical Electricity Consumption (TEC)

Standard-size format copiers, fax machines, multifunction devices, and printers using heat-intensive marking technologies, and digital duplicators

- Product's TEC (less "Ready" energy of functionally-integrated DFE, if present) must fall at or below specification limit.
- Electrophotographic and solid ink copiers, multifunction devices, and printers must meet speed-defined duplexing requirements.

Operational Mode (OM)

Non heat-intensive marking technologies, small and large format products, and scanners

- Product's Sleep mode power (less Sleep power of functionally-integrated DFE, if present) must fall at or below specification limit for marking engine plus functional adders.
- Product must enter Sleep within the maximum default-delay time provided.
- Product must meet Standby power requirements.
