

TCO Development response to First Draft Operational Mode Test Procedure for Imaging equipment.

Dear Mr. Fanara

With our limited experience of operational mode measurements on Imaging equipment we offer you the following general comments.

-We appreciate that you are keeping the tests uncomplicated and possible to perform with instruments commonly occurring in most laboratories.

-We also support your use of international standard for measuring methods and test patterns, instead of inventing your own.

As always we are following your specifications development with great interest.

Best regards

Lars Waller
