

Spatial modeling of vegetation dynamics after disturbance: The vegetation dynamics scenario builder

Kathryn Thomas, Ph.D., U.S. Geological Survey, Flagstaff, Arizona

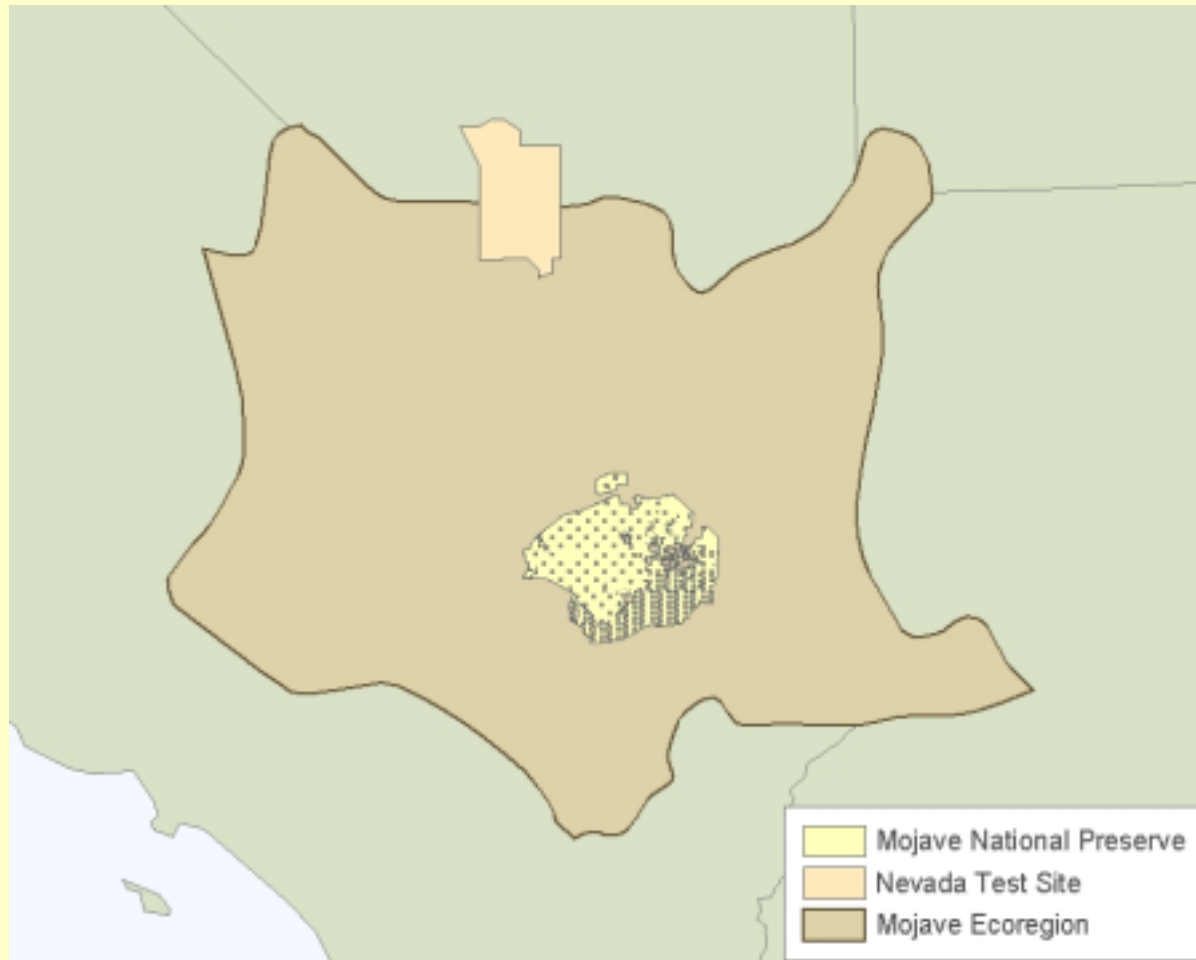

Robert H. Webb Ph.D., U.S. Geological Survey, Tucson, Arizona

Becci Dale Anderson U.S. Geological Survey, Flagstaff, Arizona

2003 Goal

- To develop spatially explicit scenarios of vegetation dynamics for the Nevada Test Site and Mojave National Preserve after severe disturbance based on measured recovery on dated sites

Mojave Ecoregion

Does Natural Recovery Occur
in Disturbed Mojave Desert
Ecosystems?

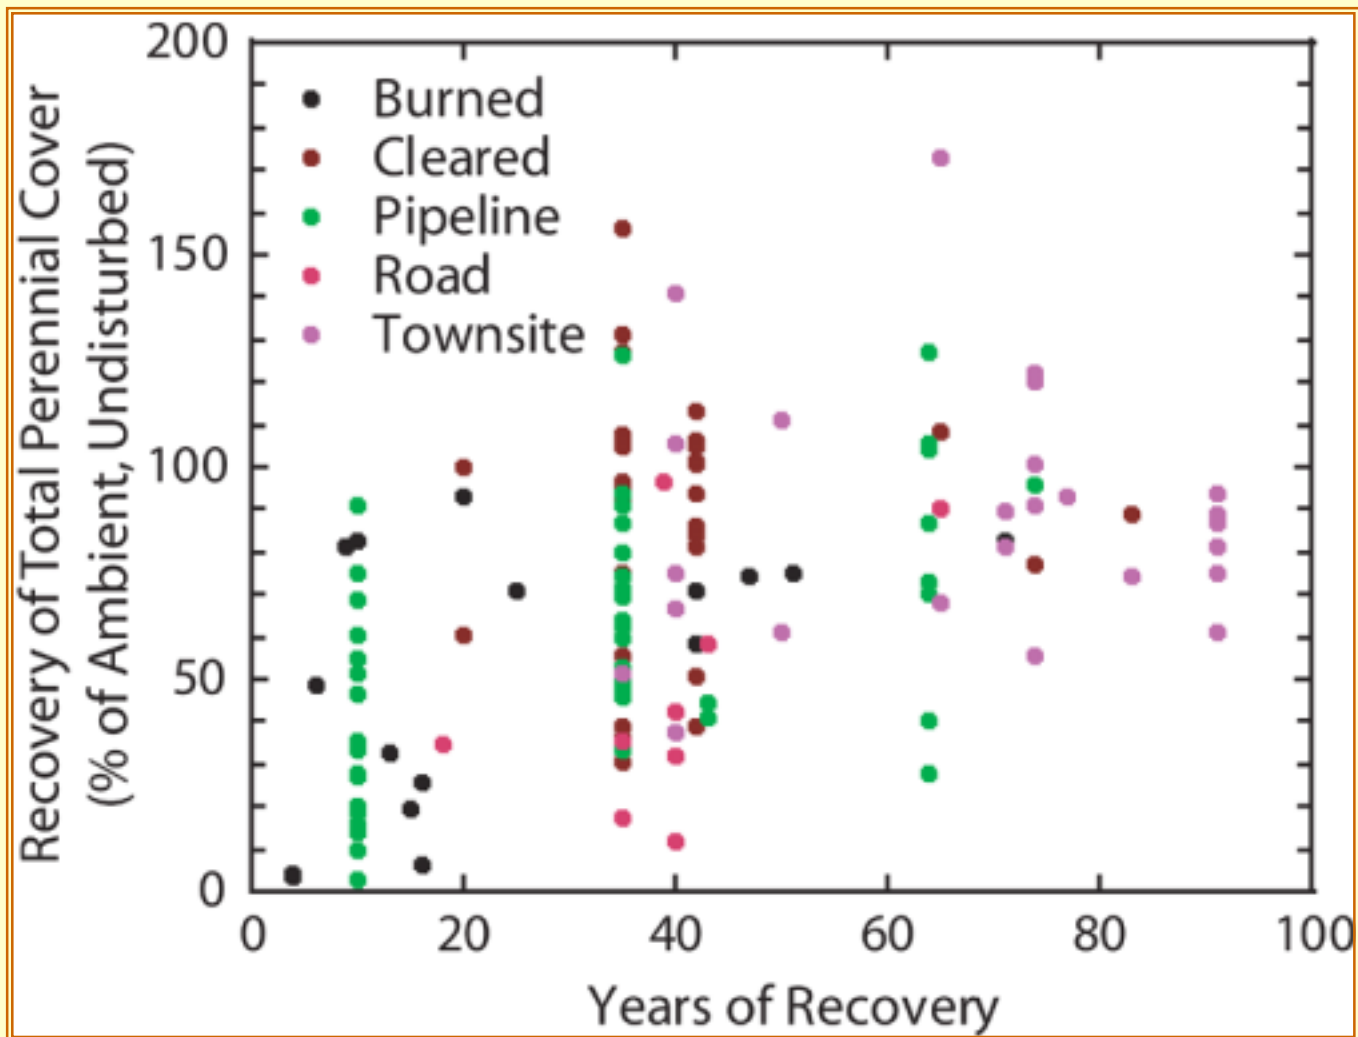

Creosote Shrubland: Coaxil Cable Line

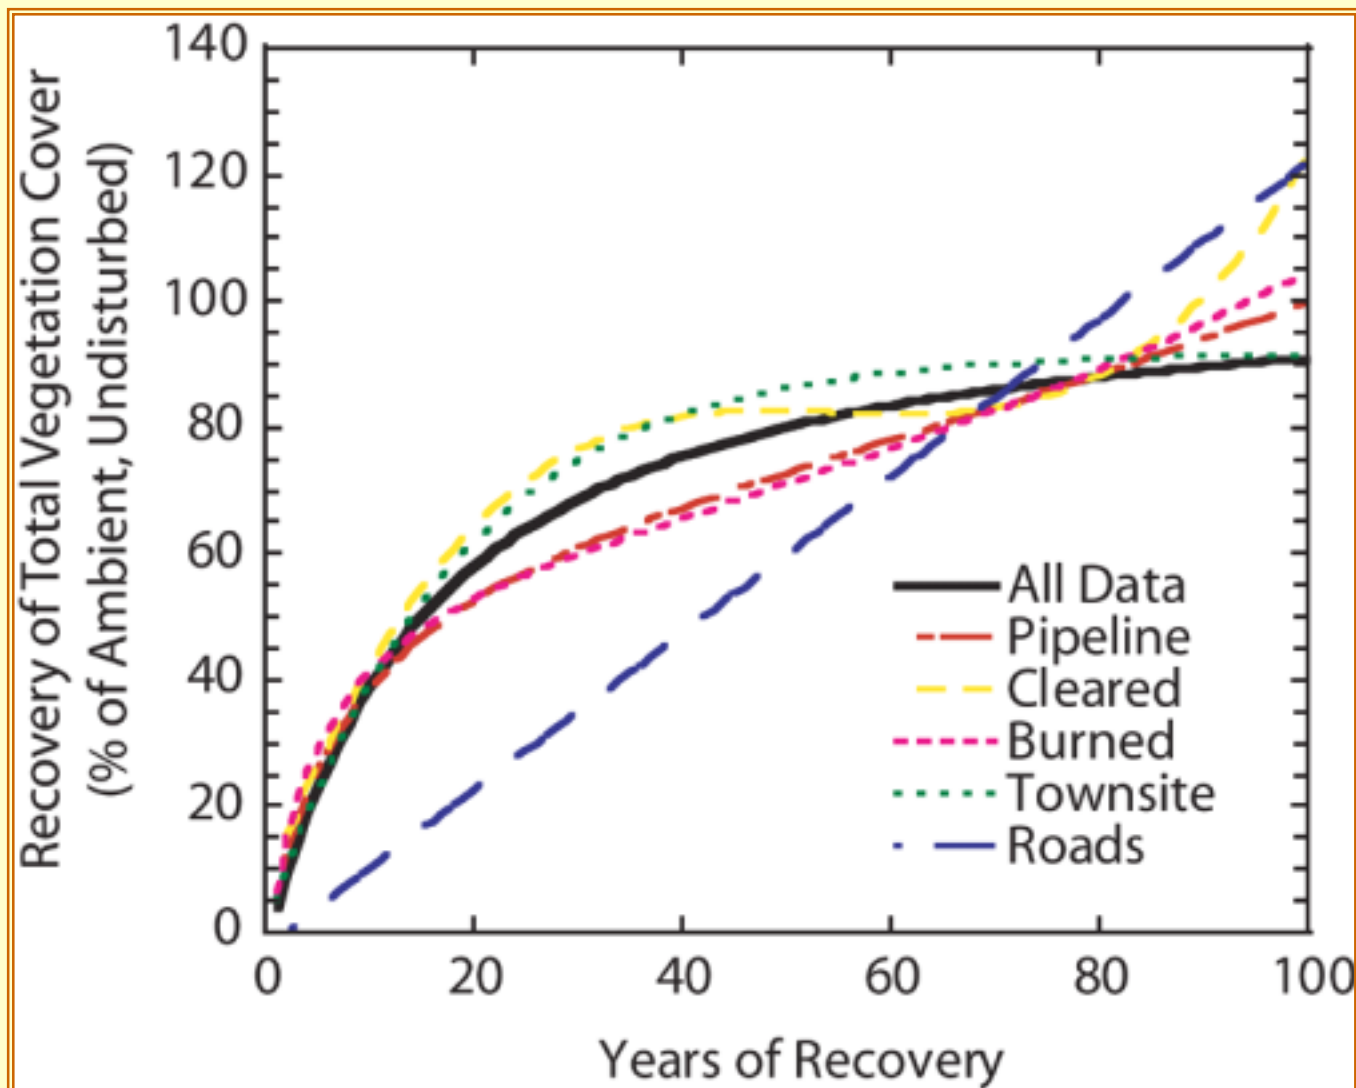

Recovery response

- Regeneration of cover, regardless of species
- Density of plants, regardless of species
- Reestablishment of initial species composition

Recovery of Total Perennial Vegetation Cover (n = 134)

Recovery of Total Perennial Vegetation Cover (6 treatments, n=134)

Vegetation dynamics scenario builder

- Apply statistical descriptions of vegetation recovery in time to distribution maps of vegetation to create spatially explicit predictions of vegetation recovery

Upper Elevation
Creosote

$$C = 90.7(1 - e^{-0.04t})$$

Recovery
Equations

Recovery
Scenario

Pilot Area – Lanfair Valley

What do we predict the cover of
vegetation will be 25 years after
disturbance?

Vegetation dynamics scenario builder

Upper Elevation
Creosote

$$C = 90.7(1 - e^{-0.04t})$$

Recovery
Equations

Equations for Recovery of Cover

Upper Elevation Creosote

$$\text{Cover} = 90.73(1 - \exp^{-.04t})$$

Mixed Mojave Shrub

$$\text{Cover} = 98.42(1 - \exp^{-.04t})$$

Blackbrush & Blackbrush Juniper

$$\text{Cover} = 65.28(1 - \exp^{-.12t})$$

Recovery Questions

- How does size of disturbance influence recovery?
- Is the number of wet/dry periods a better indicator of recovery than simple years passed?
- How does soils compaction influence recovery?
- Does the same vegetation type or species show different recovery rates depending on location surficial geology?

Modeling Questions

- Does scaling up from plots to landscapes influence the scenario predictions?
- How do we express uncertainty in the model?
- How do we verify predicted changes?

What's Next?

- Expand the pilot project to the entire Mojave National Preserve and Nevada Test Site
- Identify 'gaps' in our information input into the vegetation dynamics scenario builder
- Further develop the functionality of the vegetation dynamics scenario builder

Integrate the Vegetation Dynamics Builder into Decision Support Tools
