

Rebecca,

I just reviewed your Draft 2 and I have a question regarding undercounter dish machines. Your draft classifies undercounters as being 36" and under. We have an undercounter that is 37" tall and approved by NSF as an undercounter. In addition, I am aware of another manufacturer that has approved undercounters that is 38" tall.

How does the height of the machine have an effect on the energy rating? Our ET-AF-3 (that is 37" tall) meets all your requirements except the height standard.

I look forward to your assistance.

Respectfully,

*Chris Morse*
