PLS – 4388
FOR RELEASE:
MONDAY, MARCH 10, 2008

Union Membership in Maryland, 2007

In 2007, the number of workers belonging to a union edged down by 7,000 to 335,000 in Maryland, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. Regional Commissioner Sheila Watkins noted that union members accounted for 12.9 percent of wage and salary workers in Maryland in 2007, similar to the 13.1 percent posted in 2006. In 1989, the first year for which comparable state data were available, the union membership rate for the State was 16.0 percent.

Nationally, the number of workers belonging to a union rose by 311,000 to 15,670,000 in 2007. Union members accounted for 12.1 percent of employed wage and salary workers, essentially unchanged from 12.0 percent in 2006. In 1983, the first year for which comparable national union data were available, the union membership rate was 20.1 percent. From 1996 forward, the union membership rate in Maryland has been above the U.S. average every year except 2004. (See chart A.)

Chart A. Members of unions as a percent of employed in the United States and Maryland, 1989-2007

In addition to the 335,000 wage and salary workers in Maryland who were union members in 2007, 41,000 wage and salary workers were represented by a union on their main job, while not being union members themselves. (See table A.) Nationwide, 1.6 million wage and salary workers were represented by a union on their main job but not union members themselves.

Table A. Union affiliation of employed wage and salary workers in Maryland, annual averages 1989-2007

(Numbers in thousands)

Year	Total employed	Members of unions ¹		Represented by unions ²	
		Total	Percent of employed	Total	Percent of employed
1989	2,231	358	16.0	417	18.7
1990	2,269	328	14.5	384	16.9
1991	2,213	313	14.1	372	16.8
1992	2,246	346	15.4	396	17.6
1993	2,289	354	15.5	402	17.6
1994	n/a	n/a	n/a	n/a	n/a
1995	2,353	351	14.9	420	17.8
1996	2,392	354	14.8	415	17.4
1997	2,336	349	14.9	403	17.3
1998	2,350	331	14.1	379	16.1
1999	2,444	367	15.0	438	17.9
2000	2,415	353	14.6	410	17.0

2003	2,481	354	14.3	410	16.5
2004	2,502	272	10.9	313	12.5
2005	2,530	337	13.3	379	15.0
2006	2,614	342	13.1	386	14.8
2007	2,598	335	12.9	376	14.5

¹ Data refer to members of a labor union or an employee association similar to a union.

² Data refer to members of a labor union or an employee association similar to a union, as well as workers who are not members but whose jobs are covered by a union or employee association contract.

n/a - Not available

In 2007, 30 states and the District of Columbia had union membership rates below that of the U.S. average, 12.1 percent, while 20 states had higher rates. (See table 1.) All states in the Middle Atlantic and Pacific divisions reported union membership rates above the national average, and all states in the East South Central and West South Central divisions had rates below it. (See chart 1.) Union membership rates were down from those of 2006 in 27 states (including Maryland), up in 20 states, and unchanged in 3 states and the District of Columbia.

Among the five states reporting union membership rates below 5.0 percent in 2007, North Carolina posted the lowest rate (3.0 percent), followed by Virginia (3.7 percent), South Carolina (4.1 percent), Georgia (4.4 percent), and Texas (4.7 percent). Four states had union membership rates over 20.0 percent in 2007—New York (25.2 percent), Alaska (23.8 percent), Hawaii (23.4 percent), and Washington (20.2 percent).

Nearly half (7.8 million) of the 15.7 million union members in the United States lived in 6 states (California, 2.5 million; New York, 2.1 million; Illinois, 0.8 million; Michigan, 0.8 million; Pennsylvania, 0.8 million; and New Jersey, 0.7 million), though these states accounted for only about one-third of wage and salary employment nationally.

State union membership levels depend on both the union membership rates and the employment levels. For example, Maryland had nearly three times the union membership of North Carolina, despite having almost 1.2 million fewer wage and salary workers. Similarly, Virginia and Hawaii had virtually the same number of union members in 2007, even though Virginia's wage and salary employment level was more than six times that of Hawaii.

Technical Note

The estimates in this release are obtained from the Current Population Survey (CPS), which provides the basic information on the labor force, employment, and unemployment. The survey is conducted monthly for the Bureau of Labor Statistics by the U.S. Census Bureau from a scientifically selected sample of about 60,000 households nationwide. The union membership data are tabulated from one-quarter of the CPS monthly sample and are limited to wage and salary workers. All self-employed workers are excluded.

Union membership data, particularly levels, for each year are not strictly comparable with data for earlier years because of the introduction of revised population controls used in the CPS. The effect of the revised population controls on the union membership estimates is unknown. However, the effect of the new controls for 2007 on the monthly CPS estimates was to increase the December 2006 employment level by 153,000 and the unemployment level by 10,000. The updated controls in 2007 had little or no effect on unemployment rates and other ratios, such as union membership rates. For additional information, see "Adjustments to Household Survey Population Estimates in January 2007" in the February 2007 issue of *Employment and Earnings*, available on the Internet at <http://www.bls.gov/cps/cps07adj.pdf>.

For personal assistance or further information on union membership, as well as other Bureau data, contact the Mid-Atlantic Information Office at 215-597-3282 from 8:30 a.m. to 12:00 p.m. and 1:00 p.m. to 3:30 p.m. ET. Information in this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200, TDD message referral phone number: 1-800-877-8339.

Reliability of the estimates

Statistics based on the CPS are subject to both sampling and nonsampling error. When a sample, rather than the entire population, is surveyed, there is a chance that the sample estimates may differ from the "true" population values they represent. The exact difference, or sampling error, varies depending upon the particular sample selected, and this variability is measured by the standard error of the estimate. There is about a 90-percent chance, or level of confidence, that an estimate based on a sample will differ by no more than 1.6 standard errors from the "true" population value because of sampling error.

The CPS data also are affected by nonsampling error. Nonsampling error can occur for many reasons, including the failure to sample a segment of the population, inability to obtain information for all respondents in the sample, inability or unwillingness of respondents to provide correct information, and errors made in the collection or processing of the data.

For a full discussion of the reliability of data from the CPS and information on estimating standard errors, see the "Explanatory Notes and Estimates of Error" section of *Employment and Earnings*, at <http://www.bls.gov/opub/ee/home.htm>.

Definitions

The principal definitions used in this release are described briefly below.

Union members. Members of a labor union or an employee association similar to a union.

Represented by unions. Union members, as well as workers who have no union affiliation but whose jobs are covered by a union or an employee association contract.

Wage and salary workers. Workers who receive wages, salaries, commissions, tips, payment in kind, or piece rates. The group includes employees in both the private and public sectors, but, for the purposes of the union membership and earnings series, excludes all self-employed persons, regardless of whether or not their businesses are incorporated.
