

CONTENTS

Abstract.....	1
Introduction	1
Purpose and Scope.....	2
Acknowledgments	2
Description of Study Area	2
Methods	4
Sampling Protocol	4
Statistical Analyses.....	9
Quality Control and Assurance.....	9
Water Quality.....	10
Wastewater Indicator Compounds and Wastewater Treatment Removal Efficiencies	16
Base-Flow Water Quality.....	18
Physical Properties	18
Nutrients	19
Wastewater Indicator Compounds	20
Antioxidants.....	22
Caffeine and Cotinine.....	22
Sterols and Stanols.....	22
Phenols and Detergent Metabolites	24
Antimicrobials	25
Insect Repellents.....	27
Flame Retardants	27
Insecticides	27
PAH's.....	28
Additional Wastewater Indicators During Base Flow	28
Pharmaceutical Compounds	28
Bacteria and Bacterial Sources	31
Stormflow Water Quality.....	33
Nutrients in Stormflow	33
Wastewater Indicator Compounds	34
Antioxidants.....	35
Caffeine and Cotinine.....	35
Sterols and Stanols.....	36
Phenols and Detergent Compounds.....	36
Antimicrobials	37
Insect Repellents.....	37
Flame Retardants	37
Insecticides	37
PAH's.....	38
Relative Hydrograph Contributions of Constituents	38
Yields and Relative Water-Quality Impact Rankings.....	38
Summary.....	50
References	51

FIGURES

1.	Map showing location of study area and sampling sites	3
2.	Graphs showing mean daily discharge for Blue River near Kansas City (site 5) and Brush Creek at Ward Parkway (site 7) from October 1997 through September 2000	5
3.	Graphs showing specific conductance, pH, temperature, dissolved oxygen, and turbidity beginning August 1998 through September 2000.....	7
4.	Quantile-quantile plots showing quality assurance data	11
5. -7.	Boxplots showing:	
5.	Total nitrogen concentration by site and the percentage of the total nitrogen derived from nitrate by stream (inset) in base-flow samples	19
6.	Total phosphorus concentration by site and the percentage of the total phosphorus that is orthophosphate by stream (inset) in base-flow samples.....	21
7.	Total nonionic detergent concentration by site and stream (inset) in base-flow samples	26
8.	Graphs showing concentrations and loads of selected pharmaceutical compounds in base-flow samples.....	30
9.	Trilinear diagrams showing percentage of similarity between ribosomal patterns of <i>Escherichia coli</i> isolates from water samples at three sites when compared against three possible hosts (dog, goose, or human)	32
10.-13.	Boxplots showing:	
10.	Number of wastewater indicator compounds detected in base-flow and stormflow samples at each site.....	35
11.	Sum of loads (A) and sum of concentrations (B) for wastewater indicator compounds in storm hydrograph segments	39
12.	Yield of selected constituents in base-flow samples	40
13.	Yield of selected constituents in stormflow samples	44

TABLES

1.	Physical properties, nutrients, bacteria, and selected chemical concentrations in base-flow samples	59
2.	Concentrations of selected wastewater indicator compounds in base-flow samples.....	67
3.	Concentrations of selected wastewater indicator compounds in sewage samples.....	92
4.	Concentrations of selected water-quality constituents in stormflow samples	107
5.	Concentrations of selected wastewater indicator compounds in stormflow samples	119
6.	Concentrations of selected water-quality constituents and wastewater indicator compounds in field blank and equipment blank samples.....	161
7.	Average wastewater treatment removal efficiencies, in percent, for selected wastewater indicator compounds.....	17
8.	Detection frequency of selected pharmaceutical compounds in base-flow samples (n=39) and method detection limits.....	29
9.	Relative water-quality impact rankings between sites during storm and base-flow conditions	49
