

CONTENTS

- Abstract..... 1
- Introduction 2
 - Purpose and Scope..... 5
 - Previous Investigations 5
 - Acknowledgments 5
- Description of the Study Area 5
 - Climate..... 6
 - Topography and Geohydrology 6
 - Soils 7
 - Land Use and Population..... 7
 - Distribution of Animal Feeding Operations and Nutrient Loadings 9
- Methods of Study..... 12
 - Monitoring Network and Sample Collection..... 12
 - Bacteria Methods 14
 - Data Analysis..... 17
- Base-Flow Water Quality..... 17
 - Discharge 17
 - Physical Properties and Inorganic Constituents 19
 - Nutrients 24
 - Bacteria..... 26
 - Organic Compounds 27
 - Bacterial Sources and Pathogens 30
- Runoff Water Quality..... 34
 - Discharge and Inorganic Constituents 34
 - Nutrients and Bacteria 34
- Bacteria Trends 38
- Summary and Conclusions 41
- References 45

FIGURES

- 1. Location of the upper Shoal Creek Basin study area and Missouri Department of Natural Resources beneficial use designations for Shoal Creek..... 3
- 2. Location of U.S. Geological Survey sampling sites, land use, and distribution of poultry barns in the study area..... 4
- 3. Departure from average monthly rainfall at Cassville, Missouri, April 1999 through April 2000..... 6
- 4. Distribution of predominant soil associations in the study area..... 8
- 5. Estimated annual nutrient loadings from various sources within the study area 12
- 6. Estimated annual commercial fertilizer use (A) and annual hay production, number of cattle, and hay yield (B) in Barry County, Missouri, 1950–2000..... 13

FIGURES—Continued

7.	Precipitation at Monett, Missouri, and instantaneous discharge, specific conductance, and temperature at the temporary gaging station on Shoal Creek near site 3, May 12, 1999, to May 1, 2000.....	18
8.	Measured discharge yield from selected subbasins during January 2000	19
9.	Geographic distribution of median values of specific conductance, fecal coliform bacteria densities, concentrations of selected constituents, and estimated base-flow nutrient yields in the study area.....	21
10.	Graphical representation of analysis of variance and multiple comparison tests for selected physical properties and chemical constituents	22
11.	Trilinear diagram of major ions in stream and spring samples.....	23
12.	Boxplots showing concentrations and estimated base-flow yields of total nitrite plus nitrate in the upper Shoal Creek Basin and other streams in Missouri sampled by the U.S. Geological Survey	25
13.	Number of detections of human wastewater organic compounds and human wastewater score at selected sites	29
14.	Instantaneous discharge, specific conductance, and concentrations of selected chemical constituents in runoff water samples from sites 1, 3, and 4 collected on April 26 and 27, 1999	37
15.	Fecal coliform density and specific conductance in water samples from site 3 on Shoal Creek, annual mean discharge at the U.S. Geological Survey gaging station on Shoal Creek near Joplin, Missouri, and annual precipitation at Monett, Missouri, water years 1992 through 2000	39
16.	Comparison of measured and estimated fecal coliform density at site 3 in Shoal Creek, 1992 to 2000.....	41

TABLES

1.	Characteristics of subbasins in the upper Shoal Creek study area.....	10
2.	List of wastewater organic compounds analyzed in selected water samples.....	15
3.	List of pharmaceutical compounds analyzed in selected water samples	16
4.	Physical properties, indicator bacteria densities, and concentrations of chemical constituents in water samples from stream and spring sites	49
5.	Water-quality data for miscellaneous sites sampled during March 1999	17
6.	Summary statistics of physical properties, indicator bacteria densities, and concentrations of chemical constituents in water samples from stream and spring sites collected between April 1, 1999, and May 1, 2000	57
7.	Concentrations of wastewater organic compounds detected in selected water samples.....	28
8.	Pharmaceutical compounds tentatively identified in selected water samples from the upper Shoal Creek Basin and selected reference sites in Missouri	30
9.	Number of <i>Escherichia coli</i> isolates in water samples assigned to various sources by ribopattern analysis	32
10.	Water-quality data for the April 26 and 27, 1999, runoff event.....	35
11.	Spearman's ranked correlation coefficients between discharge and selected water-quality measurements at site 3, Shoal Creek at State Highway 97, made between 1992 and 2000	40
