

Plate 3. Longitudinal section B-B', along Base Line (pl. 2), looking northwest at Atlanta lode. Checked pattern marks former stopes, the parallel lines former mine levels, raises, and shafts (modified from Anderson (1939) and unpublished maps of Talache Mines, Inc.). Drill hole intercepts below old workings show (by symbol) year hole was drilled and abbreviated hole number. Intercept table shows year hole was drilled, complete hole number, true width of sampled material, and gold values in oz per ton. Tabular data in parentheses represent composite samples. Only holes with intercepts containing assay values of 0.10 oz Au per ton or more are shown.
