

# LP DAAC Evolution Status

**Land Processes DAAC (LP DAAC)  
User Working Group**

**August 22-23, 2007**

**Tom Sohre**

**Acting LP DAAC Project Manager**

**USGS**

# Agenda

- **EOSDIS Evolution Goals**
- **ECS/SDPS Evolution Goals**
- **ECS Milestone Status Update**
- **LP DAAC Integration & Simplification**
- **LP DAAC Schedule**
- **Post-ECS Evolution considerations**

# Core: Evolving EOSDIS

- In early 2005, NASA embarked on an EOSDIS Evolution Study
- Address multi-faceted goals/issues:
  - Manage archive volume growth
  - Improve science need response and data access
  - Reduce recurring costs of operations and sustaining engineering
  - Update age of systems and components
  - Move towards more distributed environment
- A vision for the 2015 timeframe was developed to guide conduct of study
- EOSDIS Evolution “Step 1” Plan approved by NASA Headquarters in late 2005.

# Features of EOSDIS Evolution (1 of 3)

- **Migration to commodity-based hardware**
  - reduces maintenance and technology refresh costs
  
- **Transfer responsibility for archive and distribution of MODIS Level 0, Level 1, and Atmosphere (Level 2) data from Goddard DAAC to MODIS data processing facility (MODAPs)**
  - Move from archiving all products to on-demand production of Level 1
  - Decrease archive size and slow future growth; facilitates transition to disk-based archive (all data on-line)
  - Closer relationship/control by science community expected to be more responsive to science needs, products, tools

# Features of EOSDIS Evolution (2 of 3)

- Rearchitected EOSDIS Core System (ECS) to reduce footprint; simplify system (removes 750K SLOC (current baseline 1.2M SLOC) and 15 S/W Components)
  - Reduced operations/sustaining engineering costs
  - Improved performance
- At Goddard and Langley DAACs, consolidate data holdings into single, in-house developed system at each DAAC (currently operating ECS and heritage systems at both DAACs)
  - Reduction in operations costs due to elimination of multiple systems

# Features of EOSDIS Evolution (3 of 3)

- **Earth science ClearingHUse (ECHO)**
  - Achieving higher operational maturity (ingest, reconciliation, search and order, performance, error handling)
  - Global Change Master Directory (GCMD) portal to ECHO underway
  - ECHO 8.0 based on service-oriented architecture paradigm.
- **New ROSES 2006/ACCESS ECHO client awards:**
  - “AQUA: Automated Data Query & Access for Large Earth Science Datasets”, Brian Wilson, JPL
  - “A Water and Energy Cycle EOS Clearing House Client”, Paul Houser, Institute of Global Environment and Society, Inc.
- **Current Holdings**
  - Collections 2,237
  - Granules 56 million
  - Browse 14 million

# Key Benefits of Proposed “Step 1” Plan

- ✓ **Maximize Science Value**
  - Data access easier and data products quickly available to science community
  - MODIS data more closely integrated with science community
  - Potential pathfinder for migration of other data into science communities
- ✓ **Substantial Cost Savings**
  - Addresses operational and sustaining engineering
  - Takes advantage of current IT advances
  - Investments provide return on value within 3 years
- ✓ **Manageable Risk**
  - Minimizes software development efforts
  - Builds upon existing systems
  - Utilizes steps within plan as proof of value before proceeding
  - Reduces footprint for EOSDIS Core System

# ECS/SDPS Evolution

**Rearchitect ECS to simplify sustaining engineering and automate operations**

## **Features:**

- **Simplify software architecture (eliminate 15 components & 750K SLOC)**
- **Move towards disk-based archive**
- **Leverage new hardware technology (e.g., commodity-based systems; shared storage) to reduce hardware maintenance costs**

## **Benefits:**

- **Low risk approach based on proven data pool technology**
- **Increased system automation; simplified hardware/software configuration**
- **Reduction in operational costs at ECS DAACs**
- **Improved data access due to increased on-line storage and commodity disks/platforms**
- **Provides risk mitigation for GES DAAC and LaRC DAAC ECS phase out efforts**

# ECS Milestone Status

- ✓ Sybase to Linux Transition
- ✓ SAN Monitoring Tools
- ✓ DDTS Replacement (TestTrackPro)
- ✓ AMASS to StorNext
- ✓ DAAC Blade Centers
- ✓ Rimage Replacement (Luminex)
- ✓ Release 7.20 (Migration to commodity HW, Linux)
- ✓ SAN Capacity Upgrades
- ✓ COTS Upgrades
  - ECHO WSDL Order Controller (EWOC)
  - Release 7.20+ (BMGT Patch)
  - Release 7.21 (Code simplification)

# LP DAAC Integration & Simplification

- ✓ **ASTER DAR Tool DAAC Unique Extension (DUE)**
- ✓ **Catalog Reconciliation Tool (CRT) DUE Re-design**
- ✓ **ECHO 9 Testing**
- ✓ **ASTER Expedited Flow (part of Goddard Evolution)**
- ✓ **ESDIS Metrics System (EMS) Migration (from EDGRS)**
- **Machine-to-Machine Gateway (MTMGW) DUE**
- **Traffic Cop DUE Re-Design**
- **S4PM-XML Processing Gateway DUE**
- **EDG to WIST Migration Testing**
- **ECHO 10 Testing**
- **Platform consolidation (Linux, commodity servers)**
- **Computer Room consolidation (reduce footprint)**

# Schedule

- **Week of August 27, 2007**
  - Formal retirement of ECS Java DAR Tool (replaced w/ LP DAAC DAR Tool)
- **Week of September 10, 2007**
  - ECS 7.20 Operational
  - Blade Center, Rimage Replacement, EMS Transition
- **September 25 & 26, 2007**
  - EMD / DAAC Technical Exchange Meeting
- **December, 2007**
  - MTMGW Change, Traffic Cop, EWOC
- **January, 2008**
  - ECHO 10.0 Operational, WIST replaces EDG
- **February 2008**
  - ECS 7.21+ (BMGT Patch) Delivery Review
- **March 2008**
  - ECS 7.21 Delivery Review

# Post-ECS Evolution Considerations

- **Current EOSDIS Maintenance & Development (EMD) support contract extended thru May 2009**
- **LP DAAC Silos reaching end of life**
  - EMD looking at 3<sup>rd</sup> party vendors for support
  - Moving towards more and more data online
- **Realization of Evolution Efficiencies**
  - Reduced facilities expenses
  - Less frequent changes to Baseline
  - Increased automation & monitoring

# Questions...
