

Overview of Air Accountability Program Objectives and Needs

Susan Lyon Stone
U.S. Environmental Protection Agency
Office of Air and Radiation
Office of Air Quality Planning and Standards

Danelle T. Lobdell, Ph.D.
U.S. Environmental Protection Agency
Office of Research and Development
National Health and Environmental Effects Research Laboratory

EPA's Mission

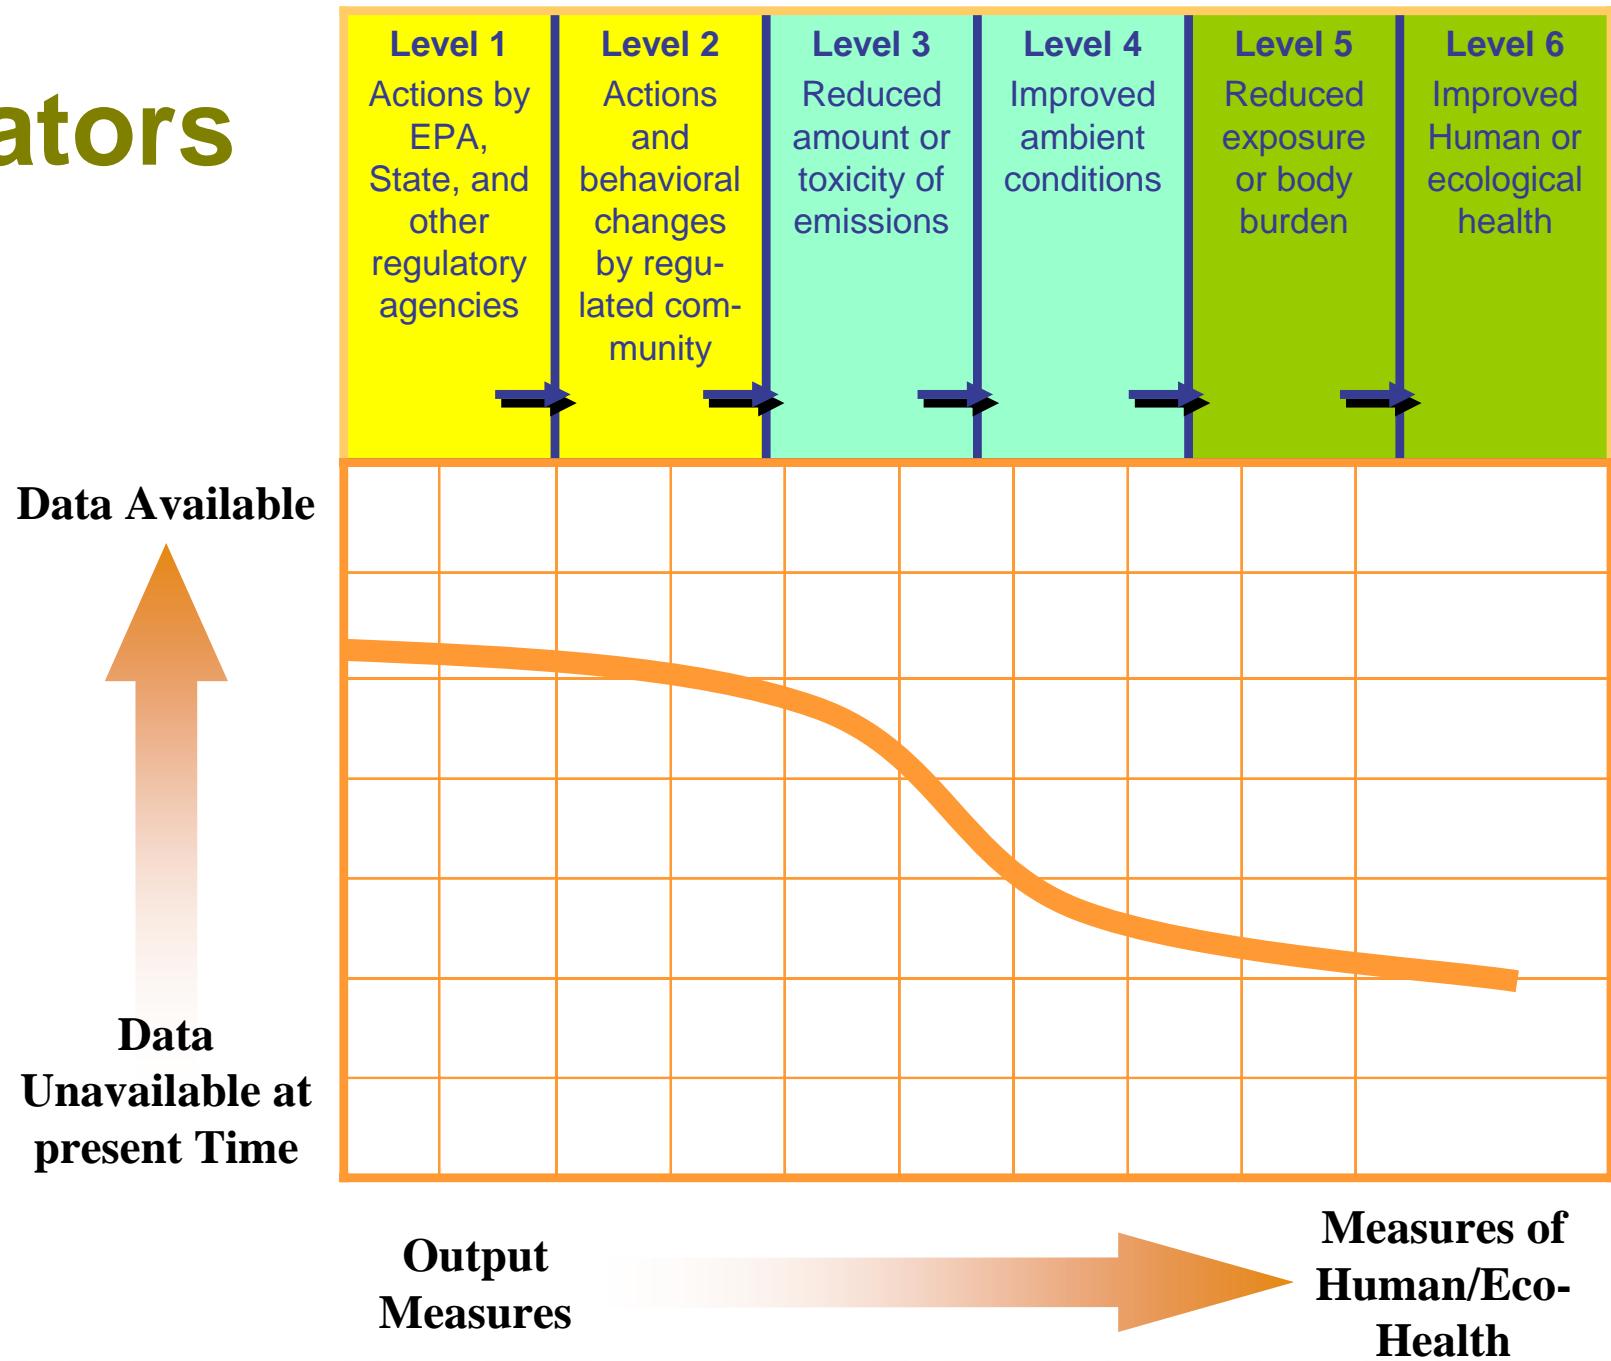

- “To protect human health and to safeguard the natural environment — air, water, and land — upon which life depends.”
- How do we measure our effectiveness?

RESEARCH & DEVELOPMENT

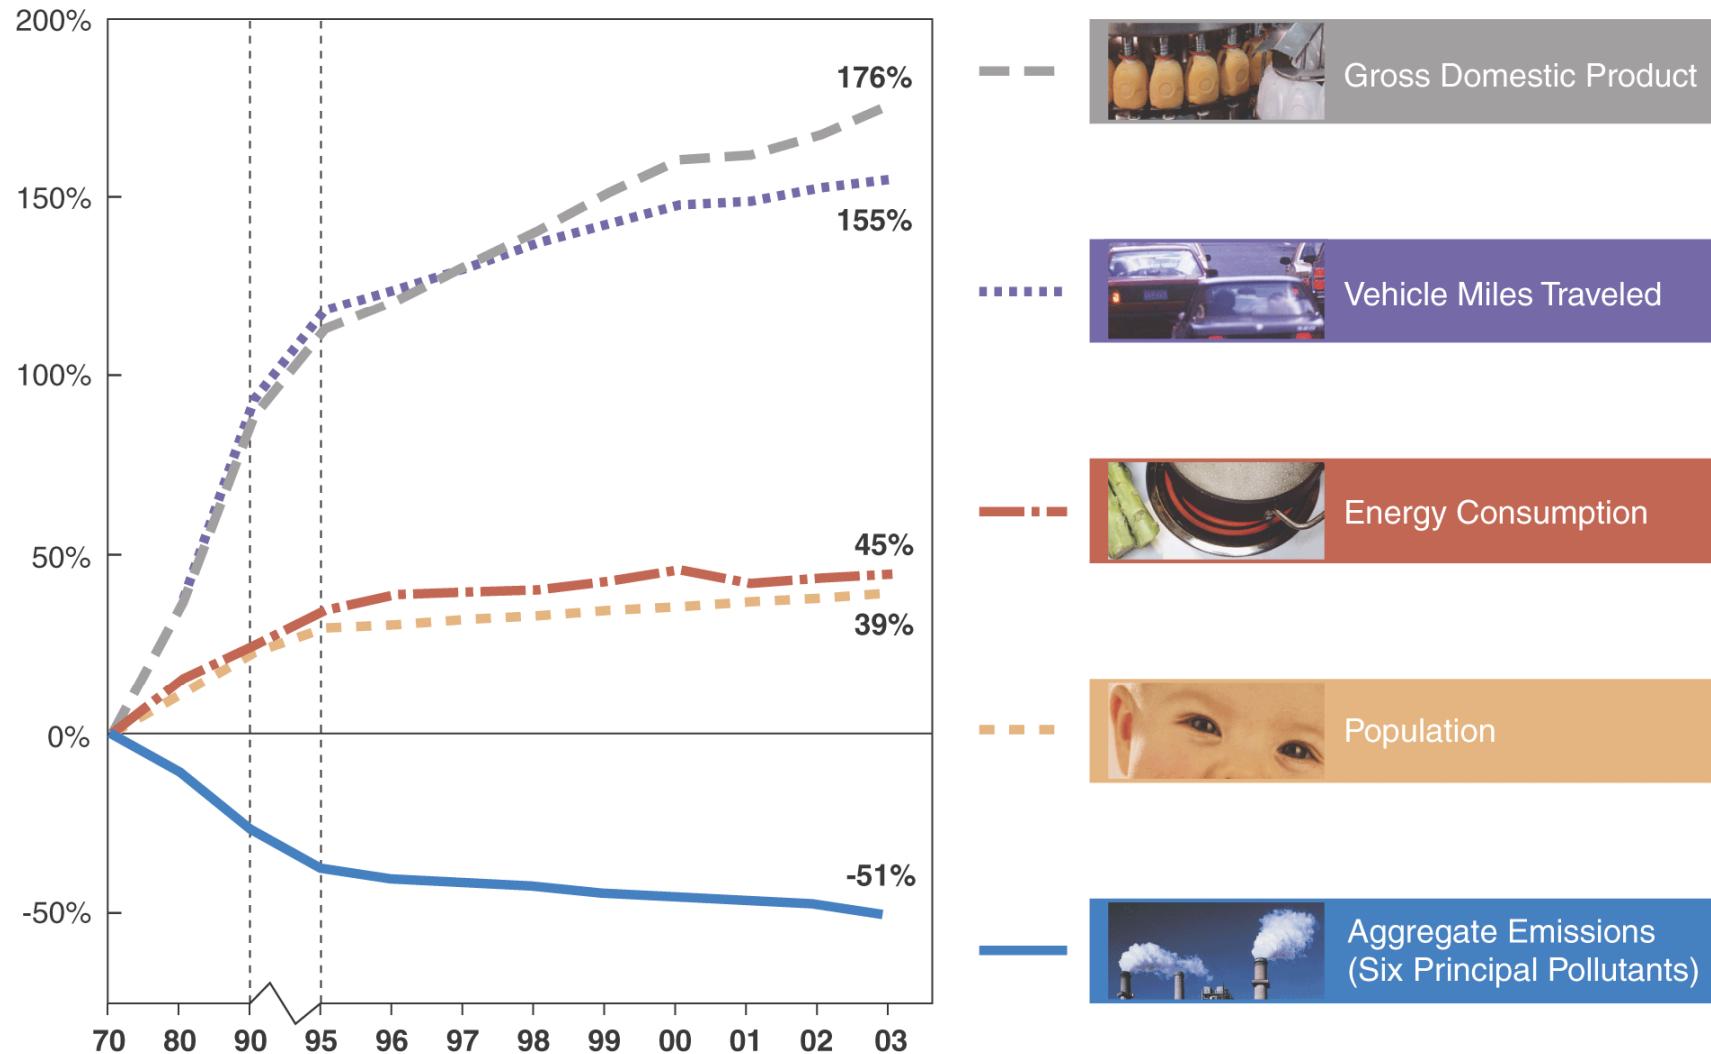

Building a scientific foundation for sound environmental decisions

Indicators

EPA progress in reducing emissions (Level 3 Indicator)

Comparison of Growth Areas and Emissions

Source: National Air Quality and Emissions Trends Report, 2003 Special Studies Edition

RESEARCH & DEVELOPMENT

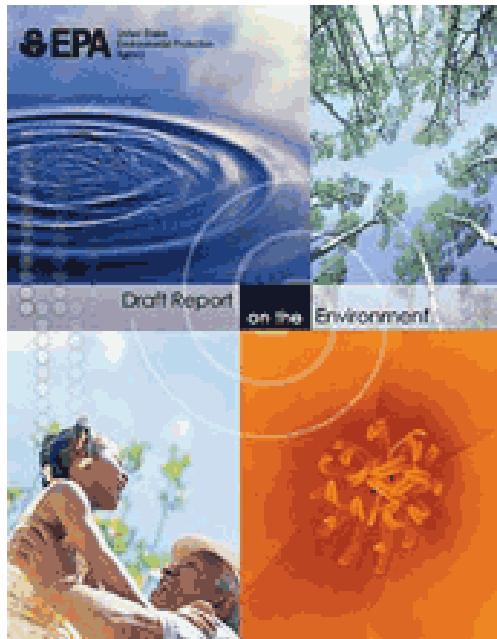

Building a scientific foundation for sound environmental decisions

Measuring Effectiveness Important

Detroit News (May 7, 2000)

- An evaluation of EPA's first 30 years
- "Air and Water are cleaner, but health gains unclear"

EPA Draft Report on the Environment

- "There is a need for measures to compare actual and predicted human health and ecological effects related to exposure to air pollutants."

National Research Council

- *Recommendation:* "Develop and implement a system to assess and monitor human health and welfare effects through the identification of indicators capable of characterizing and tracking the effects of air pollutants"

Health Effects Institute

- "Measuring the Health Impact of Actions Taken to Improve Air Quality"

RESEARCH & DEVELOPMENT

Building a scientific foundation for sound environmental decisions

CAAAC AQM Workgroup

Recommendations

EPA should work with health effects experts to develop measures to define and assess human health impacts of air pollution and ways to track and evaluate progress in reducing those impacts

- Facilitating communications among health research and program accountability efforts
- Expanding on-going efforts into public health and air quality accountability
- Undertaking specific accountability efforts
- Work with S/L/T to determine appropriate metrics to track progress

CAAAC – Clean Air Act Advisory Committee

AQM – Air Quality Management Subcommittee

RESEARCH & DEVELOPMENT

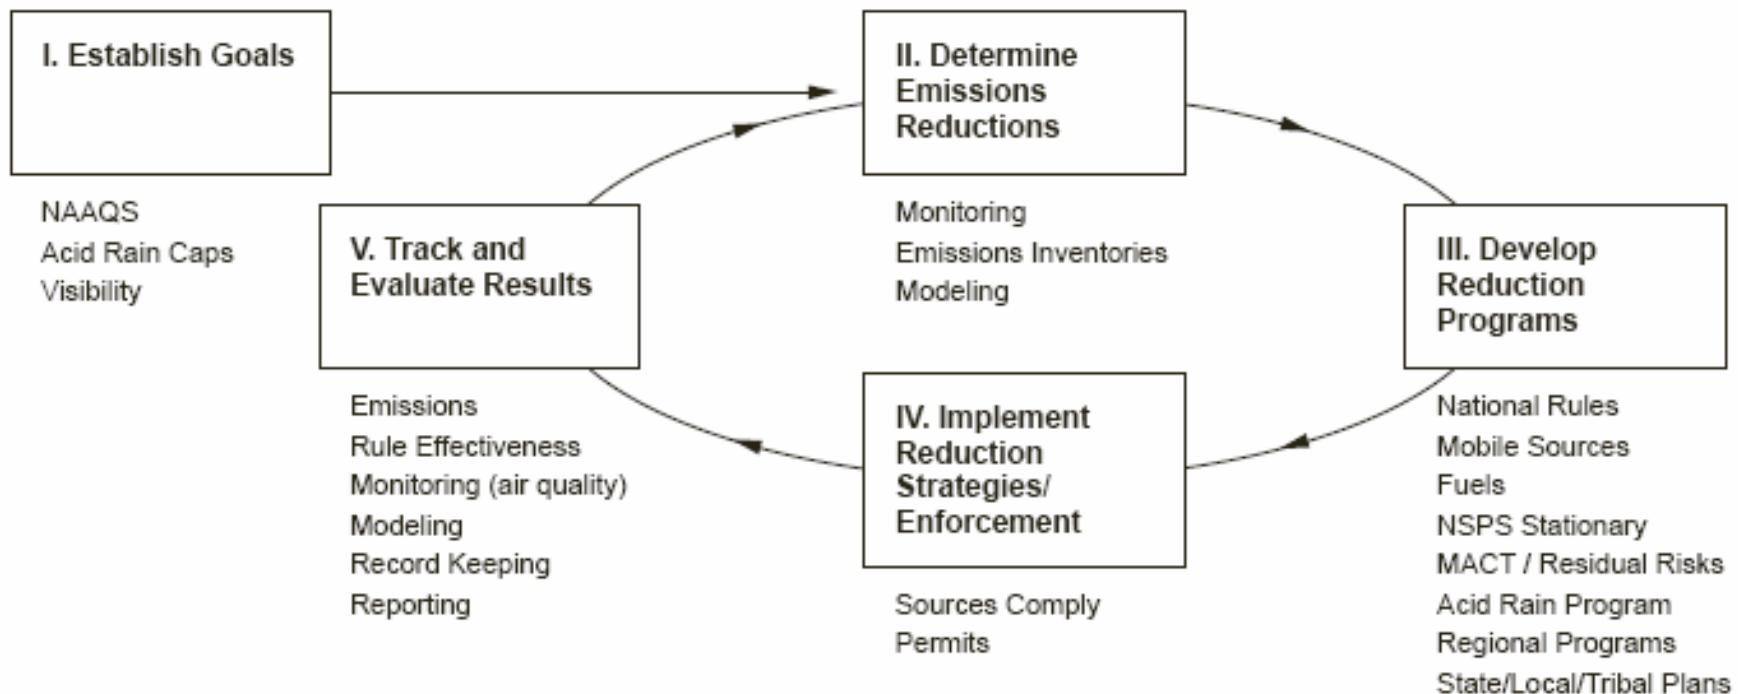

Building a scientific foundation for sound environmental decisions

CAAAC AQM Workgroup

Recommendations

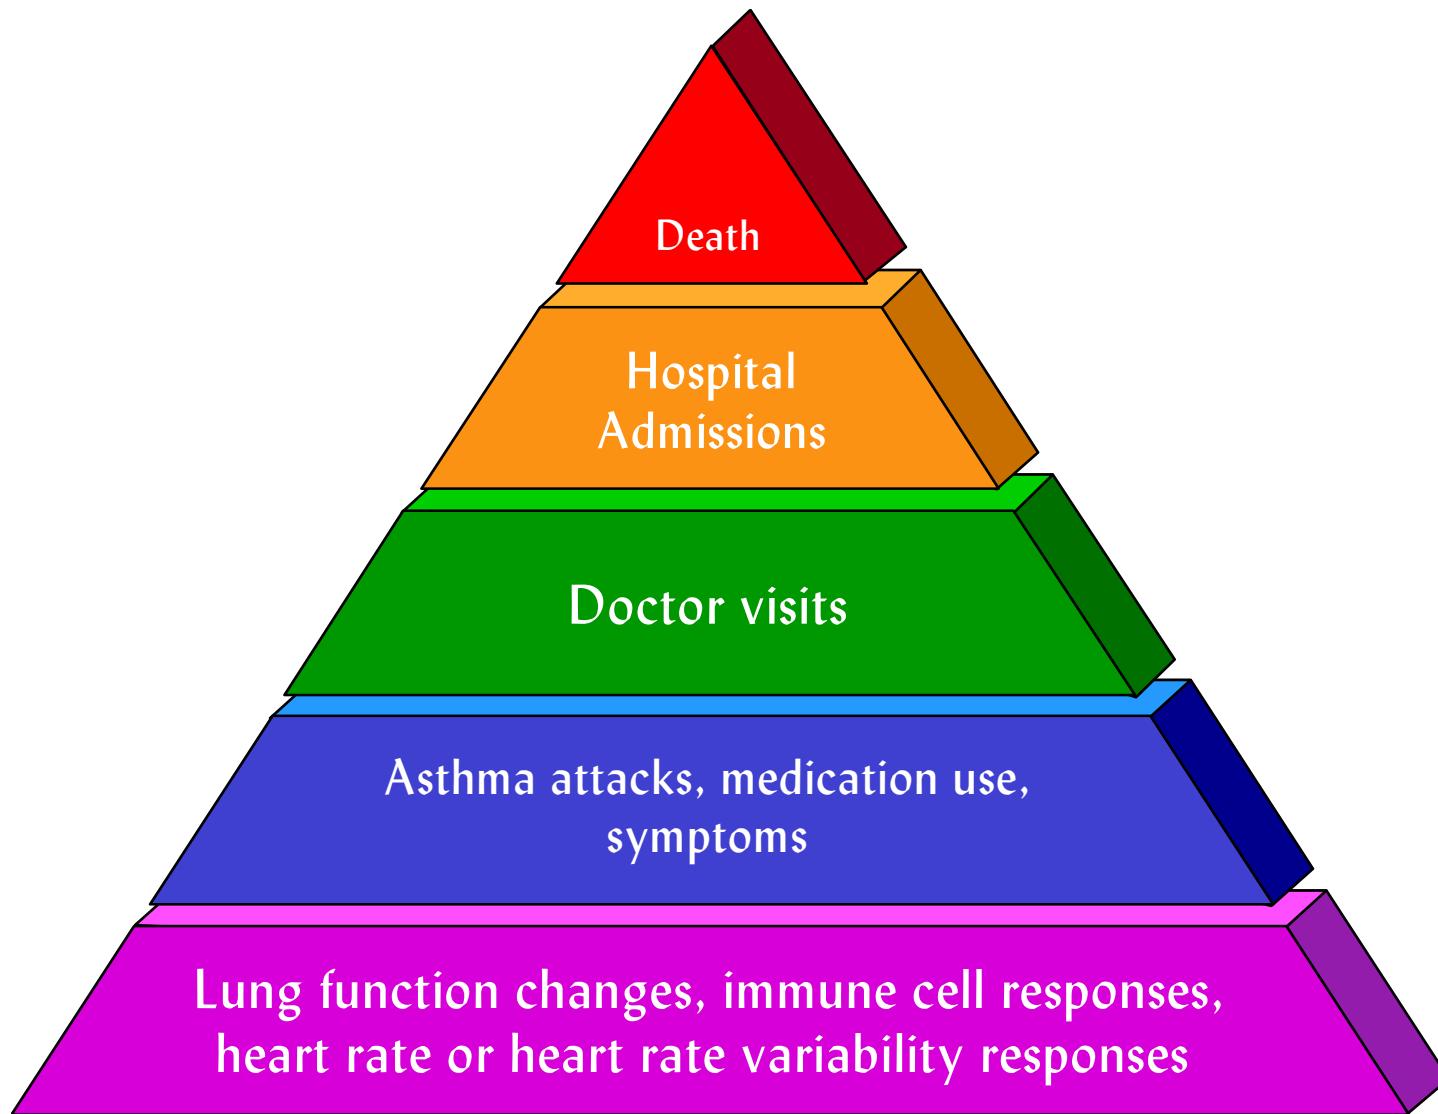

- Air quality management should be an iterative process
 - Evaluate results, and then
 - Revise reduction programs accordingly
- <http://www.epa.gov/air/caaac/aqm.html>

RESEARCH & DEVELOPMENT

Building a scientific foundation for sound environmental decisions

“Pyramid of Effects”

RESEARCH & DEVELOPMENT

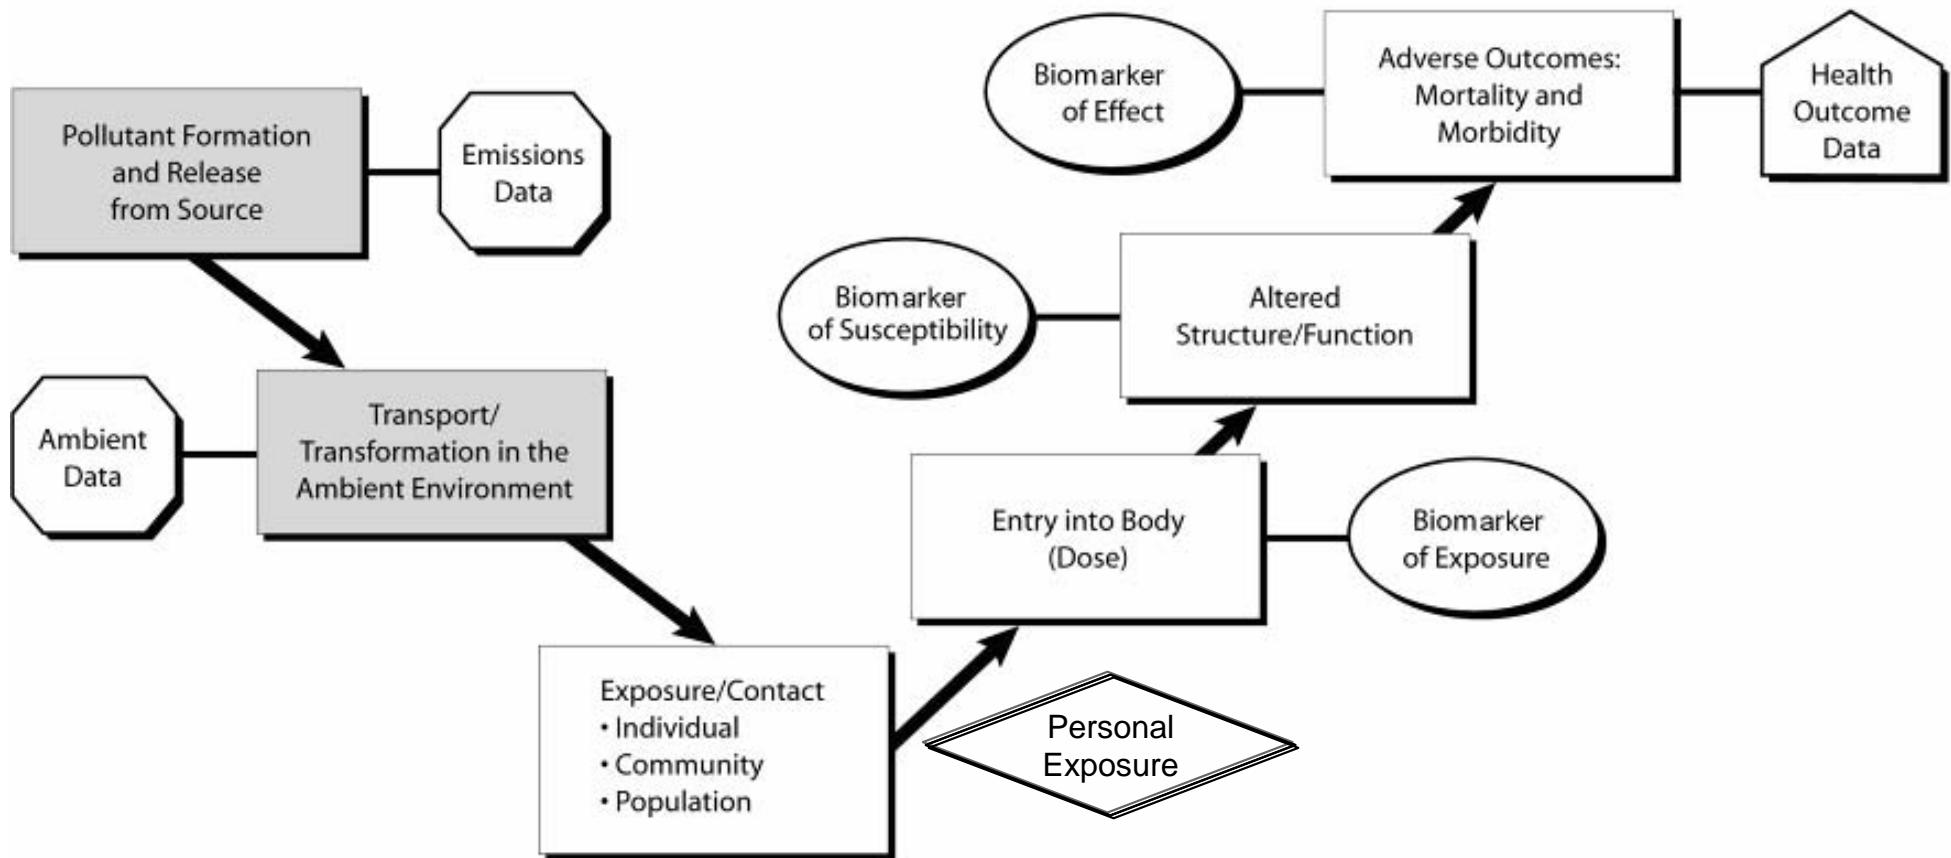

Building a scientific foundation for sound environmental decisions

Estimated Incidence Reductions from CAIR in Eastern US by 2015

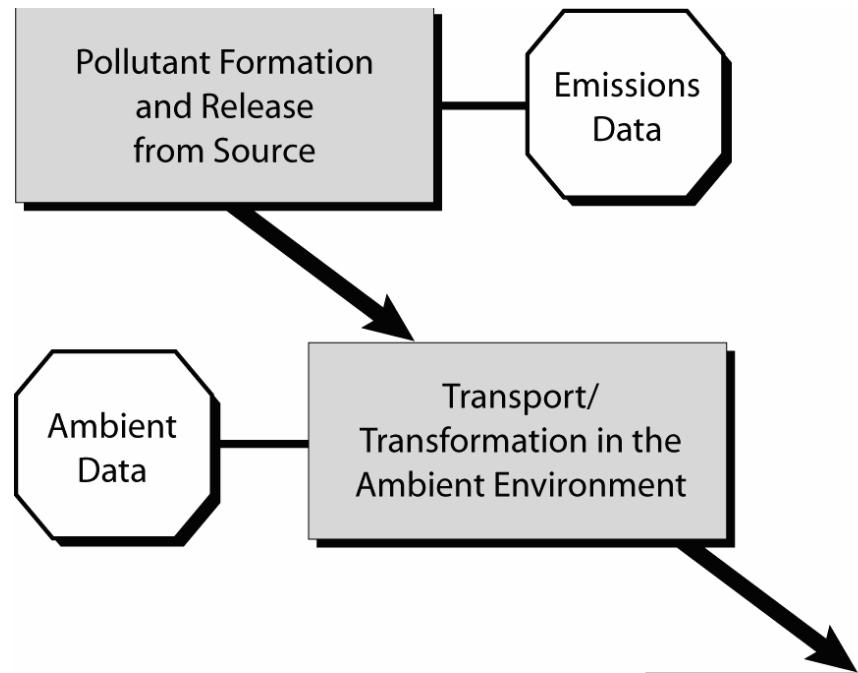

- PM-related endpoints
 - Premature mortality 17,000
 - Non-fatal MI 22,000
 - Asthma exacerbations 290,000
 - Work loss days 1,700,000
- Ozone-related endpoints
 - Hospital admissions 2,800
 - School absence days 510,000

Environmental Public Health Paradigm

Traditional Evaluation of Regulatory Management Decisions/Actions

Process indicators such as decreases in emissions, discharges and pollutant levels in environmental media

Accountability

The Agency's desire to be more accountable to the public in demonstrating true environmental process

Action: to develop and validate environmental public health indicators (EPHIs)

- Intended to reflect more closely the actual impact on public health that result from environmental decision-making
- Help clarify the benefits and costs associated with further incremental environmental improvements

What is the Difference between:

Accountability

Epidemiology

Environmental Public Health Tracking

RESEARCH & DEVELOPMENT

Building a scientific foundation for sound environmental decisions

Environmental Public Health Tracking (EPHT)

“The goal of EPHT is to protect communities by providing information to federal, state, and local agencies. These agencies, in turn, will use this information to plan, apply, and evaluate public health actions to prevent and control environmentally related diseases.”

<http://www.cdc.gov/nceh/tracking/background.htm>

RESEARCH & DEVELOPMENT

Building a scientific foundation for sound environmental decisions

Epidemiology

“The study of the distribution and determinants of health-related states or events in specified populations, and the application of this study to control of health problems.”

Last JM. 2001. A Dictionary of Epidemiology. New York. International Epidemiological Association, Inc.

RESEARCH & DEVELOPMENT

Building a scientific foundation for sound environmental decisions

Epidemiology/EPHT/Accountability

Epidemiology is research

- Both EPHT and accountability will use epidemiologic research to guide decisions
- Possibility exists that data generated for EPHT and accountability can be used in epidemiologic research

EPHT will assess trends over time to determine hazards to health in which interventions can be made

- EPHT will assess interventions

Accountability will assess interventions

- Epidemiologic tools will be one of many disciplines utilized to develop indicators
- The possibility does exist that some of the same indicators used for hazard identification in EPHT can be used in accountability assessments

RESEARCH & DEVELOPMENT

Building a scientific foundation for sound environmental decisions

Key Research Questions for Evaluating Public Health Outcomes

- What research is needed to demonstrate the relationship between EPA mandated/voluntary action and exposure reduction programs and actual health benefits?
- What tools, methods or data currently exist to evaluate EPA actions for public health benefit?
- What tools, methods or data need to be developed to evaluate EPA actions for public health benefit?

EPA Activities

- OAR & ORD
 - Air Accountability Framework Team
- OAQPS
 - Health Indicators Team
- ORD
 - Accountability Initiative
- ORD & OEI
 - EPA's Report on the Environment

OAR = Office of Air; ORD = Office of Research and Development; OAQPS = Office of Air Quality Planning and Standards; OEI = Office of Environmental Information

RESEARCH & DEVELOPMENT

Building a scientific foundation for sound environmental decisions

Air Accountability Framework Team

RESEARCH & DEVELOPMENT

Building a scientific foundation for sound environmental decisions

Approach

- Create cross-agency framework team
- Produce draft framework design
 - Prospective design, retrospective proof-of-concept
 - Indicators, monitoring, data streams, and protocols
- Reach out to partners
 - Select two testbeds
- Conduct a first order demonstration
- Apply results
 - Future monitoring and indicators development
 - Future assessment design

EPA's Core Air Accountability Framework Team

Steering and Synthesis

(Two from each team plus others)

J. Vickery & R. Scheffe

Team Co-Leads

Emissions Indicators and Measurements

Rich Cook
Andy Miller

Air Quality Indicators and Measurements

James Hemby
Tim Watkins

Human Exposure Indicators and Measurements

Alan Vette
John Girman

Ecosystem Deposition and Effects Indicators and Measurements

David Schmeltz
Betsy Smith

Human Health Effects Indicators and Measurements

Susan Stone
Danelle Lobdell

OAQPS Health Indicators Team

RESEARCH & DEVELOPMENT

Building a scientific foundation for sound environmental decisions

OAQPS Feasibility Studies

- NATA risk estimates – taken over by ORD
 - Correlation to actual cancer incidence rates
 - Reduction in risk by SES
- School absences – not feasible now
 - County-level absence data; 98 NMMAPS counties
 - Times series analysis
- Medicare data – developing study design
 - Urgent clinic visits for respiratory and cardiovascular disease
 - Matching approach – propensity scores
- Syndromic surveillance - unfunded

OAQPS/ORD Accountability Study

- National-Scale Activity Survey (N-SAS) - evaluate behavioral responses to AQI advisories
 - Cross-sectional – demographic and awareness information
 - Longitudinal – activity pattern data
 - Policy applications
 - Evaluate AQI effectiveness at reducing exposure
 - Enhance outreach programs
 - Improve risk assessments
 - Improve accountability assessments
 - Address uncertainty in modeling health effects for criteria pollutants

ORD Accountability Initiative

RESEARCH & DEVELOPMENT

Building a scientific foundation for sound environmental decisions

ORD's Accountability Initiative Implementation Process

- Built around “proof-of-concept” projects
- Program/Regional offices submit pre-proposals targeting actions/activities for which they desire to measure progress using EPHIs
- Subset selected for full proposal development by an ORD Design team

Cumulative Air Pollution Reduction Programs and Environmental Public Health Indicators for Children and Elderly

Background:

- New Haven, CT – Funded for EPA Community Air Toxics Project
 - Implemented a comprehensive Clean Air Initiative
 - Includes a number of voluntary and regulatory air pollution programs
- Development and validation of EPHIs are needed
- Existing health and environmental data are available across the United States
 - However, knowledge of these existing data may not be known
 - May have access limitations
 - Health and environmental data may not be compatible to link

RESEARCH & DEVELOPMENT

Building a scientific foundation for sound environmental decisions

Cumulative Air Pollution Reduction Programs and Environmental Public Health Indicators for Children and Elderly

Objectives:

- Existing human health and ambient exposure-related data availability and accessibility in New Haven, CT - applied to an air accountability study?
- Define what types of *de novo* data collection will be needed to cover gaps in information not available in the existing health or exposure data
- Develop collaborations and partnerships with state and local agencies including government, academia and community
- Conduct air quality modeling and evaluation of cumulative exposure assessment modeling that can be used potentially to link with health data
- Assess the feasibility of conducting an air accountability study in New Haven, CT

RESEARCH & DEVELOPMENT

Building a scientific foundation for sound environmental decisions

EPA Report on the Environment 2007 (ROE)

RESEARCH & DEVELOPMENT

Building a scientific foundation for sound environmental decisions

ROE

Purpose:

Pose important questions – of trends in environmental condition and possible associated human health and ecological impacts – relevant to EPA's mission

Principles:

- Maintain the objectivity of the indicators; this is not a program report
- Keep focused with EPA lens; but not an Agency report card
- Complement the Agency's Strategic Planning efforts
 - inform development of strategic outcomes
 - need for better outcomes drive data priorities
- Identify gaps in the information to be helpful in our decision-making about how to invest in the future

Scope:

- Air, Water, Land, Human Health, and Ecological Condition Chapters
 - Questions, Indicators, Gaps and Limitations
 - National but will contain region-specific “examples” and regional subsets of national trends

Products:

- Technical Document, Highlights of Conditions and Trends (based on Technical Document), e-ROE(will be interactive and will contain both documents)

<http://www.epa.gov/indicators/>

RESEARCH & DEVELOPMENT

Building a scientific foundation for sound environmental decisions

Questions and Indicators for:

Air Chapter

What are the trends in outdoor air quality and their effects on human and the environment?

PM emissions, SO₂ emissions, VOC emissions, Lead emissions, Air toxics emissions, CO emissions, Mercury emissions, Ambient PM concentrations, Ambient ozone concentrations, Ambient concentrations of select air toxics, Ambient CO concentrations, Ambient NO_x concentrations, # and % days with AQI values > 100, Ambient Manganese metal compounds concentration in Region 5, Ozone and PM concentrations for U.S. counties in the U.S./Mexico border region, Concentrations of ozone depleting substances, Acid deposition, Lake and stream acidity, Ozone injury to forest plants, Regional haze

What are the trends in greenhouse gas emissions and concentrations?

U.S. greenhouse gas emission, Atmospheric concentrations of greenhouse gases

What are the trends in indoor air quality and its effects on human health?

U.S. homes above EPA's radon action level, Blood cotinine levels

Health Chapter

What are the trends in health status in the U.S.?

Life Expectancy at Birth, Infant mortality, General Mortality

What are the trends in human disease and conditions for which environmental pollutants may be a risk factor, including across population subgroups and geographic regions?

Cancer Incidence, Childhood Cancer Incidence, CVD Prevalence and Mortality, Asthma Prevalence, COPD Prevalence and Mortality, Infectious Diseases Associated with Environmental Exposures or Condition, Low Birthweight, Birth Defects Occurrence and Mortality, Preterm Delivery

What are the trends in exposure to environmental pollutants including across population subgroups and geographic regions?

Blood Lead Level, Blood Mercury Level, Blood Cadmium Level, Blood POPs Level, Urinary Pesticide Level, Urinary Phthalate Level, Blood cotinine levels

Future

- Plan to update data yearly in the e-ROE
- Produce new document every three years to reevaluate the questions and indicators
 - What is the appropriate scale for indicators?
 - Report itself will always be National in scope
 - Regional?
 - State?
 - Local?

Leverage Work From Extramural Activities?
