Samples were collected on February 2, 1992 and submitted to Alpha Analytical for analysis of Appendix IX+3 constituents.

Only detected constituents are shown.

ppm = Parts per million.

() = Re-analysis of dioxin/furan compounds for a sample result.

M = Indicates a presence was noted, but not at a level that the laboratory could provide a definite identification or quantity.

--- = Indicates not detected at or above the detection level.

** = Split sample result (IT Analytical Services).

Dup = Duplicate sample result.

Notes:

Samples were collected between June 5 and 24, 1991 and submitted to Compuchem Laboratories, Inc. for analysis of Appendix IX+3 semivolatile constituents.

Only detected constituents are shown.

DL - Dilution of sample.

ppm - Parts per million - dry weight

- Indicates not detected at or above the detection level

^D - Compounds identified at a secondary dilution factor.

^j - Value indicates an estimated value less than the CLP required quantitation limit

^E - The compound concentrations exceed calibration range of the GC/MS instrument for that specific analysis.

^x - Coeluting isomers were noted by the laboratory.

^b - The analyte was also detected in the associated blank.

NA - Not analyzed.

() - Re-analysis of dioxin/luran compounds for a sample result.

M - Indicates a presence was noted but not at a level that the laboratory could provide a definite identification or quantity.

(1) - Cannot be separated from Diphenylamine.

Dup - Indicates duplicate sample.

Notes:

Samples were collected between June 5 and 24, 1991 and submitted to Compuchem Laboratories, Inc. for analysis of Appendix IX+3 inorganic constituents.

Only detected constituents are shown

ppm - parts per million - dry weight

— Indicates not detected at or above the detection level.

^j - Indicates an estimated value between the CLP required detection limit and the instrument detection limit.

^l - A chemical or physical interference effect was encountered during the analysis of the flagged analyte

Dup - Indicates duplicate sample.

RE - Indicates re-extraction of sample.

^J - Value indicates an estimated value below the method detection limit.

^X - Coeluting isomers were noted by the laboratory.

NA - Not analyzed.

Notes:

Samples were collected between February 4 and 13, 1991 and submitted to Compuchem Laboratories, Inc. for analysis of Appendix IX+3 semivolatile constituents.

Only detected constituents are shown.

RE - Indicates re-extraction of sample.

DL - Dilution of sample.

ppm - Parts per million.

ppt - Parts per trillion.

- Indicates not detected at or above the detection limit.

^j - Value indicates an estimated value less than the CLP required quantitation limit.

M - Indicates a presence was noted, but not at a level that the laboratory could provide a definite identification or quantity.

^d - Compounds identified at a secondary dilution factor.

^e - The compound concentrations exceeded the calibration range of the GC/MS Instrument for that specific analysis.

^x - Coeluting isomers were noted by the laboratory.

(1) - Cannot be separated from Diphenylamine.

NA - Not analyzed.

Notes:

1. ND - Not detected
2. ^b - Analyte was also detected in the associated method blank
3. ^j - Indicates an estimated value below the CLP required quantitation limit
4. ^w - Component has a quantitation limit two times that listed
5. # - Detected as Diphenylamine
6. ^P - Elevated detection limit due to presence of Aroclor 1260
7. ^Q - Elevated quantitation limit due to sample matrix interferences
8. All samples were analyzed for Appendix IX constituents plus benzidine, 2-chloroethyl vinyl ether, and 1,2-diphenyldiazine. Constituents that were analyzed for, but not detected were not included in this table

Notes:

Samples were collected between June 25 and July 10, 1991 and submitted to Compuchem Laboratories, Inc. for analysis of Appendix IX+3 volatile constituents.

Only detected constituents are shown.

RE - Indicates re-extraction of sample

ppm - Parts per million

-- Indicates not detected at or above the detection level.

^a - Value indicates an estimated value less than the CLP required quantitation limit.

^b - The analyte was also detected in the associated blank.

^j - Compounds identified at a secondary dilution factor.

Dup - The compound concentrations exceeded the calibration range of the GC/MS instrument for that specific analysis.

Dup - Indicates duplicate sample.

Notes:

Samples were collected between June 25 and July 10, 1991 and submitted to Compuchem Laboratories, Inc. for analysis of Appendix IX+3 semivolatile constituents.

Only detected constituents are shown.

DL - Dilution of sample

parts per million - dry weight.

- Indicates not detected at or above the detection level.

J - Value indicates an estimated value less than the CLP required quantitation limit.

D - Compounds identified at a secondary dilution factor.

E - The compound concentrations exceed calibration range of the GC/MS instrument for that specific analysis.

X - Coeluting isomers were noted by the laboratory.

B - The analyte was also detected in the associated blank.

NA - Not analyzed.

M - Indicates a presence was noted, but not at a level that the laboratory could provide a definitive identification or quantity.

() - Re-analysis of dioxin/furan compounds for a sample result.

(1) - Cannot be separated from Diphenylamine.

Dup - Indicates duplicate sample.

Notes:

Samples were collected on May 7, 1991 and submitted to Compuchem Laboratories, Inc. for analysis of Appendix IX+3 constituents.

Only detected constituents are shown.

ppm - Parts per million - dry weight.

ND - Not detected.

^J - Value indicates an estimated value less than the CLP required quantitation limit.

^B - Analyte was also detected in the associated blank.

^{J*} - Indicates an estimated value between the CLP required detection limit and the instrument detection limit.

^I - For inorganics, indicates that a chemical or physical interference effect was encountered during the analysis of the flagged analyte. Concentrations are mg/kg equivalent to parts per million (ppm), as indicated in the table.

M - Indicates a presence was noted, but not at a level that the laboratory could provide a definite identification or quantity.

X - Coeluting isomers were noted by the laboratory.

Notes:

1. Co-located with Monitor 007.
2. Averages are calculated using one-half the detection limit for non-detect events.
3. Based on six sampling events between June 15, 1992 and August 14, 1992.
4. Observations from summer 1991 and 1992 were combined to produce summer averages.
5. Sampling Stations 001 through 007 had several observations of non-detect.
6. ND - Below the detection limit of 0.0005 $\mu\text{g}/\text{m}^3$.
7. (-) - Indicates that a non-detect was recorded on several occasions.
