**Re: GE-Pittsfield/Housatonic River Site
Monthly Status Report Pursuant to Consent Decree for November 2007 (GECD900)**

Dear Mr. Tagliaferro and Ms. Steenstrup:

Enclosed are copies of General Electric's (GE's) monthly progress report for November 2007 activities conducted by GE at the GE-Pittsfield/Housatonic River Site. This monthly report is submitted pursuant to Paragraph 67 of the Consent Decree (CD) for this Site, which was entered by the U.S. District Court on October 27, 2000.

The enclosed monthly report includes not only the activities conducted by GE under the CD, but also other activities conducted by GE at the GE-Pittsfield/Housatonic River Site (as defined in the CD). The report is formatted to apply to the various areas of the Site as defined in the CD, and to provide for each area, the information specified in Paragraph 67 of the CD. The activities conducted specifically pursuant to or in connection with the CD are marked with an asterisk. GE is submitting a separate monthly report to the Massachusetts Department of Environmental Protection (MDEP), with a copy to the United States Environmental Protection Agency (EPA), describing the activities conducted by GE at properties outside the CD Site pursuant to GE's November 2000 Administrative Consent Order from MDEP.

The enclosed monthly report includes, where applicable, tables that list the samples collected during the subject month, summarize the analytical results received during that month from sampling or other testing activities, and summarize other groundwater monitoring and oil recovery information obtained during that month. Also, enclosed for each of you (and for Weston) is a CD-ROM that contains these same tables of the analytical data and monitoring information in electronic form.

Please call Andrew Silber or me if you have any questions.

Sincerely,

This report covers activities in the areas listed below (as defined in the CD and/or the accompanying Statement of Work for Removal Actions Outside the River [SOW]). Only those areas that have had work activities for the month subject to reporting are included. The specific activities conducted pursuant to or in connection with the CD are noted with an asterisk.

a. Activities Undertaken/Completed

- Collected and transferred approximately 42,000 gallons of water from Building 9, and 11,500 gallons of groundwater from Building 9B and 14 watermain cut-off excavations to Building 64G for treatment.
- Conducted background air monitoring for PCBs in preparation for remediation activities, as identified in Table 3-1.*
- Completed repair and replacement of areas of degraded pavement identified by GE and EPA.

b. Sampling/Test Results Received

See attached tables.

c. Work Plans/Reports/Documents Submitted

- Responded (via e-mail) to two questions raised by EPA regarding GE's October 26, 2007 revised proposal for the disposition of demolition debris from Buildings 7, 11, 16, 17, 17C, and 19 (November 8, 2007).*
- Submitted Supplemental Information Package (SIP) for remediation at East Street Area 2-North (November 13, 2007).*
- Submitted to EPA (via e-mail) the results of supplemental building material sampling in Buildings 7, 17, 17C, and 19 for TCLP analyses, and identified a minor modification to GE's previously proposed segregation and disposition approach for Building 17 based on the TCLP analytical results (November 13, 2007).

d. Upcoming Scheduled and Anticipated Activities (next six weeks)

- Schedule initiation of demolition activities for Buildings 7, 11, 16, 17, 17C, and 19 following receipt of all necessary regulatory approvals for GE's October 26, 2007 revised proposal regarding disposition of demolition debris from those buildings.
- Following receipt of EPA comments on GE's October 26, 2007 proposal regarding disposition of demolition debris from Buildings 7, 11, 16, 17, 17C, and 19, submit draft CD modification to allow the proposed disposition.*
- Initiate remediation activities following receipt of necessary EPA approvals, subject to weather conditions.

e. General Progress/Unresolved Issues/Potential Schedule Impacts

- GE is awaiting EPA's comments on GE's December 21, 2006 proposal for the remaining at-grade concrete slabs of certain buildings in the portion of East Street Area 2-North that is intended to be transferred to PEDDA (i.e., the 19s Complex).*
- GE and EPA are currently discussing issues relating to disposition of demolition debris from Buildings 7, 11, 16, 17, 17C, and 19.*
- Demolition activities for Buildings 7, 11, 16, 17, 17C, and 19 will be scheduled following receipt of all necessary regulatory approvals for disposition of demolition debris from those buildings.
- The formal follow-notification letter associated with GE's May 10, 2007 verbal notification to EPA and MDEP regarding the result of a liquid sample collected from a drainage piping system in the Building 11 laboratory will be submitted after GE has completed removal of any additional liquids collected from the piping system (as discussed with M. Milette [EPA] during the May 10, 2007 verbal notification, and documented in a May 17, 2007 letter to EPA regarding the results of certain oil samples from Buildings 11 and 16). However, given site-specific conditions, such additional removal activities can only be completed as part of the demolition of Buildings 11 and 16. Therefore, submittal of the follow-up notification letter is dependent upon initiation of demolition activities for those buildings.

f. Proposed/Approved Work Plan Modifications

Received EPA conditional approval of GE's September 27, 2007 Building 100 Averaging Area Evaluation and GE's October 31, 2007 Modifications to Revised Post-Removal Site Control Plan (Attachment E to Final RD/RA Work Plan) (November 15, 2007).

*** All activities described below for this item were conducted pursuant to the Consent Decree.**

a. Activities Undertaken/Completed

- Conducted air monitoring for particulates and PCBs, as identified in Table 5-1.
- Continued transfer of leachate from Building 71 On-Plant Consolidation Area (OPCA) to Building 64G for treatment. The total amount transferred in November 2007 was 13,000 gallons (see Table 5-2).
- Conducted preliminary data review (PDR) of PCB analytical data for ambient air samples collected from the OPCA air monitors on November 6-7, 2007 (see Table 5-3). The PDR was conducted based on the following data quality indicators associated with the tabulated data set – sampling collection time, sampling calibration check, temperature receipt, associated blanks, laboratory control samples, recoveries and surrogate recoveries – in accordance with Validation Annex F in GE’s revised Field Sampling Plan/Quality Assurance Project Plan (FSP/QAPP) and the Region I Data Validation Functional Guidelines referenced therein. Tier I and Tier II data validation of all PCB analytical data for ambient air samples collected from the OPCA air monitors during these events will be conducted after receiving the full data package(s) from the laboratory.
- Conducted Tier I and Tier II data validation of PCB analytical data for ambient air samples collected from the OPCA air monitors on October 2-3, 2007. The Tier I and Tier II data validation consisted of a review of all data package summary forms for identification of quality assurance/quality control (QA/QC) deviations, as well as qualification of the data, in accordance with Validation Annex F in GE’s revised FSP/QAPP and the Region I Data Validation Functional Guidelines referenced therein. The Tier I/II review resulted in minor qualifications of these data, mostly related to the tentative identification of Aroclor 1248, as shown in Table 5-5. However, the PCB analytical data from these samples have an overall usability of 100%. The validated data from these events are included in Table 5-6 (the year-to-date summary PCB table).
- Activities conducted in November 2007 related to the relocation of storm and sanitary sewer lines from beneath the Hill 78 OPCA to the Hill 78 Area-Remainder are discussed in Item 6.
- Placed soils from various stockpiles around plant area in the Hill 78 OPCA.

c. Work Plans/Reports/Documents Submitted

Submitted to EPA, via electronic mail, the PCB analytical data for ambient air samples collected from the OPCA monitors on November 6-7, 2007 along with Tier II validated results for the data for the October 2-3, 2007 OPCA air monitoring events (November 28, 2007).

d. Upcoming Scheduled and Anticipated Activities (next six weeks)

Notes:

All sampling activities performed by Berkshire Environmental Consultants, Inc. All analytical activities performed by Northeast Analytical, Inc.

ND - Non Detect (<0.0003)

PDR - Preliminary Data Review

J - Indicates that the associated numerical value is an estimated concentration.

¹ Sample location NW-030707-012 was qualified due to pre-event sample collection pump flow percent difference (%D) greater than 10% from target flow rate.

² Prior to the June 6-7, 2007 sampling event, sampling data that did not match the Aroclor pattern established through analysis of the target Aroclor standard (which consisted of data for Aroclor 1248) were qualified as non-detect ("ND"), and the Total PCB concentration was adjusted to reflect the qualification of those data as "ND".

³ Based on discussions with the EPA, beginning with the June 6-7, 2007 sampling event, sampling data that did not match the Aroclor pattern established through analysis of the target Aroclor standard (which consisted of data for Aroclor 1248) were qualified as estimated ("J").

⁴ During PDR, this value was reported from the confirmation column and was later corrected to the value from the primary analytical column.

⁵ Sample result qualified as estimate due to confirmation column analysis exhibiting a %D greater than the control limit.

⁶ PDR was conducted based on the following data quality indicators associated with the tabulated data set above: sampling collection time, sampling calibration check, temperature receipt, associated blanks, laboratory control samples recoveries, and surrogate recoveries.

⁷ Sample did not meet validity requirements and was not analyzed. Sample did not meet the QA/QC criteria of 24 hours ± 30 minutes.

⁸ Sample results qualified as estimate due to the laboratory control sample (LCS) exhibiting a recovery less than the control limit and exhibiting a relative percent difference (RPD) between the LCS and laboratory control sample duplicate (LCSD) greater than the control limit.

⁹ Sample result qualified as estimate due to the co-located field duplicate exhibiting a RPD greater than the control limit.

¹⁰ Sample did not meet QA/QC criteria and was invalidated as a result of the pre- and post- event 1 point audits being out of range.

e. General Progress/Unresolved Issues/Potential Schedule Impacts

During fall 2007 inspection activities at Parcel J9-23-16, a discrepancy was identified between the as-built survey drawing and the technical drawing in the Final RD/RA Work Plan. Based on that comparison, the final surface restoration for a portion of Parcel J9-23-16 was not performed in accordance with the requirements of the technical drawing. A scope of work for limited additional excavation and pavement restoration activities at this parcel to correct this discrepancy was submitted to EPA on October 31, 2007, and that work was conducted on November 7, 2007.

(Note: This item is limited to activities conducted by GE and does not include work performed by EPA.)

a. Activities Undertaken/Completed

- On GE's behalf, ARCADIS BBL performed one round of water column monitoring at 10 locations along the Housatonic River between Coltsville, MA and Great Barrington, MA, on November 27, 2007. Two of these locations are situated in the 1½ Mile Reach: Lyman Street Bridge (Location 4) and Pomeroy Avenue Bridge (Location 6A). A composite grab sample was collected at each location and submitted to Northeast Analytical for analysis of PCBs (total), total suspended solids (TSS), POC, and chlorophyll-a, as identified in Table 14-1. The sample collected at Pomeroy Avenue Bridge was also analyzed for volatile suspended solids (VSS). (The other eight locations are discussed under Items 15 and 20 below.)
- On GE's behalf, ARCADIS BBL performed four rounds of routine weekly water column sampling at the Pomeroy Avenue Bridge (Location 6A). Samples were submitted to Northeast Analytical for analysis of PCBs (total), TSS, VSS, and POC, as identified in Table 14-1. This effort was a continuation of sampling performed in support of the Corrective Measures Study (CMS) modeling for the Rest of River, and is therefore further discussed under Item 15 below.*

b. Sampling/Test Results Received

See attached tables.

c. Work Plans/Reports/Documents Submitted

None

d. Upcoming Scheduled and Anticipated Activities (next six weeks)

- Continue Housatonic River water column monitoring.
- Continue routine weekly water column sampling at Pomeroy Avenue Bridge and conduct storm event water column sampling at that location if a storm event occurs.*

PE - Aroclor 1248 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1248 is not present in the sample, but is reported to more accurately quantify PCBs present in a sample that has undergone environmental alteration.

a. Activities Undertaken/Completed

- On GE's behalf, ARCADIS BBL performed one round of water column monitoring at 10 locations along the Housatonic River between Coltsville and Great Barrington, MA, on November 27, 2007. Two locations are situated in the 1½ Mile Reach of the Housatonic River and were discussed in Item 14. One location is at the outlet of Silver Lake and is discussed in Item 20 below. Of the remaining seven locations, two are located upstream of the 1½ Mile Reach: Hubbard Avenue Bridge (Location 1) and Newell Street Bridge (Location 2). The five remaining locations are situated in the Rest of the River: Holmes Road Bridge (Location 7); New Lenox Road Bridge (Location 9); Woods Pond Headwaters (Location 10); Schweitzer Bridge (Location 12); and Division Street Bridge (Location 13). Sampling activities were performed at these locations on November 27, 2007, from downstream to upstream. Composite grab samples were collected at each location sampled and submitted to Northeast Analytical for analysis of PCBs (total), TSS, POC, and chlorophyll-a, as identified in Table 15-1.
- On GE's behalf, ARCADIS BBL performed four rounds of routine weekly water column sampling at the Pomeroy Avenue Bridge (Location 6A) as a continuation of the sampling program designed to obtain additional data on East Branch PCB inputs to the Rest of the River for use in the CMS modeling. Composite grab samples were collected on November 9, 15, 19, and 27, 2007, and were submitted to Northeast Analytical for analysis of PCBs (total), TSS, VSS, and POC, as identified in Table 14-1 (under Item 14 above).*
- GE and its contractor, BioGenesis Enterprises, Inc., continued the chemical extraction treatability study.*
- GE conducted soil, water, and sediment sampling as part of chemical extraction treatability study, as identified in Table 15-1.*
- GE conducted sampling of glycol/antifreeze and wipe sampling of equipment used in association with chemical extraction treatability study, as identified in Table 15-1.
- GE conducted drum sampling at Building 78 of decontamination water used in association with chemical extraction treatability study, as identified in Table 15-1.
- Approximately 3,850 gallons of water from the chemical extraction treatability study were collected and transferred to Building 64G for treatment.*
- GE continued work on the CMS.*
- GE continued discussions with EPA on issues relating to modeling in the CMS.*

Notes:

1. Samples were collected by ARCADIS BBL, and submitted to Northeast Analytical, Inc. for analysis of unfiltered PCBs, total suspended solids (TSS), particulate organic carbon (POC), and chlorophyll
2. (a).
Sampling methods involved the collection of composite grab samples at each location, representative of three stations (25, 50, and 75 percent of the total river width at each location) at 50 percent of the total river depth at each station.
3. the total river depth at each station.
4. ND - Analyte was not detected. The number in parenthesis is the associated detection limit.
Field duplicate sample results are presented in brackets.

Data Qualifiers:

AG - Aroclor 1260 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

AF - Aroclor 1254 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PE - Aroclor 1248 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1248 is not present in the sample, but is reported to more accurately quantify PCBs present in a sample that has undergone environmental alteration.

Notes:

1. Samples were collected by ARCADIS BBL, and submitted to SGS Environmental Services, Inc. for analysis of dioxin/furans.
2. ND - Analyte was not detected. The number in parentheses is the associated detection limit.
3. Total 2,3,7,8-TCDD toxicity equivalents (TEQs) were calculated using Toxicity Equivalency Factors (TEFs) derived by the World Health Organization (WHO) and published by Van den Berg et al. in Environmental Health Perspectives 106(2), December 1998.
4. Field duplicate sample results are presented in brackets.

Data Qualifiers:

Organics (dioxin/furans)

- E - Analyte exceeded calibration range.
- J - Indicates an estimated value less than the practical quantitation limit (PQL).
- I - Polychlorinated Diphenyl Ether (PCDPE) Interference.
- Q - Indicates the presence of quantitative interferences.
- X - Estimated maximum possible concentration.
- Y - 2,3,7,8-TCDF results have been confirmed on a DB-225 column.

Notes:

1. Samples were collected by ARCADIS BBL, and submitted to Northeast Analytical, Inc. for analysis of PCBs and total organic carbon (TOC).
2. % RSD - Percent relative standard deviation.
3. NA - Not Analyzed - TOC Replicate 4 is only analyzed and reported by laboratory when the % RSD of Replicate 1 thru Replicate 3 is greater than 25%.
4. NA¹ - Not Analyzed - Laboratory did not report results for this analyte.
5. Only those constituents detected in one or more samples are summarized.
6. Field duplicate sample results are presented in brackets.

Data Qualifiers:

AG - Aroclor 1260 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PE - Aroclor 1248 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1248 is not present in the sample, but is reported to more accurately quantify PCBs present in a sample that has undergone environmental alteration.

Notes:

1. Samples were collected by ARCADIS BBL, and submitted to Northeast Analytical, Inc. for analysis of PCBs (filtered and unfiltered), total organic carbon (TOC) (filtered and unfiltered), total dissolved solids (TDS) and total suspended solids (TSS).
2. NA - Not Analyzed.
3. Only those constituents detected in one or more samples are summarized.
4. Field duplicate sample results are presented in brackets.

Data Qualifiers:

Organics: (PCBs)

AG - Aroclor 1260 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

AF - Aroclor 1254 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB - Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCBs present in a sample that has undergone environmental alteration.

PD - Aroclor 1242 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1242 is not present in the sample, but is reported to more accurately quantify PCBs present in a sample that has undergone environmental alteration.

PE - Aroclor 1248 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1248 is not present in the sample, but is reported to more accurately quantify PCBs present in a sample that has undergone environmental alteration.

Conventionals and Total Organic Carbon

B - Indicates an estimated value between the instrument detection limit (IDL) and practical quantitation limit (PQL).

GROUNDWATER MANAGEMENT AREAS
PLANT SITE 1 (GMA 1)
(GEC310)
NOVEMBER 2007**

* All activities described below for this item were conducted pursuant to the Consent Decree.

a. Activities Undertaken/Completed

General:

- Conducted routine groundwater elevation and NAPL monitoring activities.
- Performed follow-up inspections of wells identified as needing repairs during semi-annual monitoring event.
- Conducted drum sampling at Building 78 of purge water from monitoring wells within GMA 1, as identified in Table 21-1.

East Street Area 1-North and South:

- Continued automated groundwater and NAPL pumping at North Side and South Side Caissons. No LNAPL was recovered from the North Side or South Side Caisson in November.
- Continued routine well monitoring and manual NAPL removal activities. Approximately 0.049 liter (0.013 gallon) of LNAPL was removed from this area during November.

East Street Area 2-South:

- Continued automated groundwater and LNAPL removal activities. A total of approximately 2,548,999 gallons of groundwater was recovered from pumping systems 64R, 64S, 64V, 64X, RW-1(S), RW-1(X), and RW-2(X). In addition, approximately 552 gallons of LNAPL were removed from pumping systems 64R, 64V, GMA1-17W, RW-1(S), RW-1(X), 64X, and 64S Caisson.
- Continued automated DNAPL removal activities. Approximately 20 gallons of DNAPL were removed from pumping system RW-3(X) during November.
- Continued routine well monitoring and manual NAPL removal activities. Approximately 11.731 liters (3.095 gallons) of LNAPL were removed from wells in this area during November. Approximately 2.338 liters (0.617 gallon) of DNAPL was removed from wells in this area during November.
- Treated/discharged 2,684,122 gallons of water through 64G Groundwater Treatment Facility.
- Conducted LNAPL recovery testing at well 95-4R.

a. Activities Undertaken/Completed (cont'd)

East Street Area 2-North:

- Continued well monitoring and NAPL removal activities. No LNAPL was recovered from this area during November.

20s, 30s, and 40s Complexes:

- Continued well monitoring and NAPL removal activities. No LNAPL was recovered from this area during November.

Lyman Street Area:

- Continued automated groundwater and NAPL removal activities. A total of approximately 139,963 gallons of groundwater was recovered from pumping systems RW-1R, RW-2, and RW-3. No LNAPL was removed from the automated recovery systems during November.
- Continued routine well monitoring and NAPL removal activities. No LNAPL was removed from wells in this area during November. Approximately 2.221 liters (0.586 gallon) of DNAPL were removed from wells in this area during November.
- Continued construction of new piping network from well RW-4 to the Lyman Street recovery systems.

Newell Street Area II:

- Continued automated DNAPL removal activities. A total of approximately 205 gallons of DNAPL was removed by System 2 in November.
- Continued routine well monitoring and NAPL removal activities. No LNAPL was recovered from this area during November. Approximately 1.623 liters (0.428 gallon) of DNAPL were recovered from wells in this area during November.

b. Sampling/Test Results Received

- See attached tables. Groundwater elevation data collected during the October 2007 groundwater sampling activities that were not included in the October monthly report have been incorporated into the November 2007 monitoring tables.
- Preliminary analytical results received in November 2007 from the fall 2007 GMA 1 interim groundwater quality monitoring activities are shown in Table 21-2. These preliminary results have been compared to the applicable Method 1 GW-2 and GW-3 groundwater standards and UCLs for groundwater set forth in the MCP. (Note that, under this interim monitoring program, samples collected for PCBs, cyanide, or metals analyses are analyzed for these constituents in filtered form only.) These comparisons indicate the following:
 - There were no exceedances of UCLs in any of the groundwater sample results received in November 2007.
 - The Method 1 GW-2 standard was not exceeded in any of the GW-2 groundwater sample results received in November 2007.
 - The Method 1 GW-3 standard for chlorobenzene (1 ppm) was exceeded in the sample from monitoring well ES2-2A. Similar chlorobenzene concentrations were previously observed in samples collected from this well.
 - The Method 1 GW-3 standard for PCBs (0.0003 ppm) was exceeded in the filtered samples from monitoring wells E2SC-23, ESA1N-52, and GMA1-25. GW-3 exceedances for PCBs were previously observed in samples collected from wells E2SC-23 and ESA1N-52. Well GMA1-25 was sampled for the first time in fall 2007. Although the analytical result from the primary sample was greater than the GW-3 standard, no PCBs were detected in a duplicate sample collected from the location.
 - The Method 1 GW-3 standard was not exceeded in any of the other groundwater sample results received in November 2007.

d. Upcoming Scheduled and Anticipated Activities (next six weeks)

- Complete interim groundwater quality sampling analyses at wells 3-6C-EB-14 and N2SC-7S (see Item 21.e below).
- Continue routine groundwater and NAPL monitoring/recovery activities.
- Continue installation of new automated recovery system in well RW-4 in former scrapyard portion of East Street Area 2-South.
- Continue construction of new piping network from well RW-4 to the Lyman Street recovery systems.
- Install replacement for well NS-9 at Newell Street Area II.

e. General Progress/Unresolved Issues/Potential Schedule Impacts

- The replacement for monitoring well O-R in the 20s Complex was not installed following decommissioning of that well in December 2006, as the proposed location was not accessible to the drill rig. No suitable alternate locations could be identified where a well could be installed at this time, due to future changes in the ground surface that are proposed for this area. Following discussions among representatives of GE, EPA, and PEDAA, it was decided that the well would be installed following construction/re-grading activities in this area. At that time, GE will also extend or cut certain existing wells to fit the final grade, as discussed in GE's May 22, 2006 proposal.
- Wells 3-6C-EB-14 and N2SC-7S were not located during the initial fall 2007 sampling activities. GE utilized surveyors to find these wells and will complete the required sampling activities in early December 2007.

After treatment, the majority of the water processed at GE's Building 64G groundwater treatment facility is discharged to the Housatonic River through NPDES permitted Outfall 005. However, as part of GE's overall efforts to contain NAPL within the site and to optimize NAPL recovery operations, a portion of the treated water discharged from the 64G facility is routed to GE's on-site recharge pond located in East Street Area 2-South.

Notes:

1. ft BMP - feet Below Measuring Point.
2. --- indicates LNAPL or DNAPL was not present in a measurable quantity.
3. NA indicates information not available.
4. NM indicates information not measured.
5. P indicates that LNAPL is present at a thickness that is < 0.01 feet, the corresponding thickness is recorded as such.
6. Well HR-G2-RW-1 is constructed at an angle of 41.67 degrees from vertical. Depth to water data reflect measurements collected along the angled well casing. Groundwater elevations are corrected to account for the angle of the well casing.
7. A survey reference point (SG-HR-1) was established on the Newell Street Bridge. The "Depth to Water" value(s) provided in the above table refer to the vertical distance from the surveyed reference point to the water surface.
8. * - A weighted bailer has been installed at this location to remove accumulations of DNAPL. The DNAPL thickness reported is that measured within the bailer upon the initial retrieval.

e. General Progress/Unresolved Issues/Potential Schedule Impacts

The Fall 2007 Monitoring Event Evaluation Report is scheduled to be submitted within 60 days of receipt of the final laboratory data packages from the Fall 2007 sampling event. Following receipt of those data packages, GE will discuss the reporting schedule with EPA and will identify a specific submittal date in the next monthly report. In this connection, as discussed with EPA, GE plans to sample newly-installed well GMA2-10 in early December 2007, and GE and EPA will then determine whether the report submittal schedule will be based on the receipt of data packages from this well or from the GMA 2 wells that were sampled in November 2007.

NOVEMBER 2007

* All activities described below for this item were conducted pursuant to the Consent Decree.

a. Activities Undertaken/Completed

- Conducted routine groundwater elevation and NAPL monitoring activities. Approximately 68.893 liters (18.18 gallons) of LNAPL were removed by the automatic skimmer located in well 51-21 and an additional 9.054 liters (2.39 gallons) of LNAPL were manually removed from the wells in this area during November (see Table 23-5).
- Conducted Fall 2007 interim groundwater quality sampling and analysis activities.
- Conducted drum sampling of purge water from sampling and development of wells within GMA 3, as identified in Table 23-1.
- Conducted drum sampling of decontamination water associated with the installation of recovery well GMA3-17, as identified in Table 23-1.

b. Sampling/Test Results Received

- See attached tables.
- Preliminary analytical results received in November 2007 from the Fall 2007 GMA 3 interim groundwater quality monitoring activities are shown in Table 23-4. These preliminary results have been compared to the applicable Method 1 GW-2 and GW-3 groundwater standards and UCLs for groundwater set forth in the MCP. These comparison indicate the following:
 - The Method 1 GW-2 standard was not exceeded in any of the GW-2 groundwater sample results received in November 2007.
 - The Method 1 GW-3 standards for benzene (10 ppm) and chlorobenzene (1 ppm) were exceeded in the sample from well 6B-R. This is the first such exceedance for benzene observed at this well. Similar chlorobenzene concentrations have previously been observed at this well.
 - There were no other exceedances of the Method 1 GW-3 standards, and no exceedances of the UCLs, in the groundwater sample results received in November 2007.

ITEM 24
GROUNDWATER MANAGEMENT AREAS
PLANT SITE 3 (GMA 4)
(GEC340)
NOVEMBER 2007

* All activities described below for this item were conducted pursuant to the Consent Decree.

a. Activities Undertaken/Completed

- Conducted routine groundwater elevation monitoring activities.
- Conducted drum sampling at Building 78 of purge water from monitoring wells within GMA 4, as identified in Table 24-1.
- Performed follow-up inspections of wells identified as needing repairs during the semi-annual monitoring event.
- Sampled well 78-6 (see Item 24.e below).

b. Sampling/Test Results Received

- See attached tables. Groundwater elevation data collected during the October 2007 groundwater sampling activities that were not included in the October monthly report have been incorporated into the November 2007 monitoring tables.
- Preliminary analytical results received in November 2007 from the fall 2007 GMA 4 interim groundwater quality monitoring activities (two wells) are shown in Table 24-2. These preliminary results have been compared to the applicable Method 1 GW-2 and GW-3 groundwater standards and UCLs for groundwater set forth in the MCP. (Note that, under this interim monitoring program, samples collected for PCBs, cyanide, or metals analyses are analyzed for these constituents in filtered form only.) These comparisons indicate the following:
 - There were no exceedances of UCLs in either of the groundwater sample results received in November 2007.
 - The Method 1 GW-2 standard was not exceeded in either of the GW-2 groundwater sample results received in November 2007.
 - A concentration equal to the Method 1 GW-3 standard for lead (0.01 ppm) was observed in the filtered sample from monitoring well OPCA-MW-6. No exceedances of this standard for lead have previously been observed at this well.
 - No other Method 1 GW-3 standards were exceeded in either of the groundwater sample results received in November 2007.

(GECD340)
NOVEMBER 2007**

c. Work Plans/Reports/Documents Submitted

None

d. Upcoming Scheduled and Anticipated Activities (next six weeks)

- Continue routine monthly monitoring at well GMA4-3.
- Potentially install replacements for wells OPCA-MW-1R and OPCA-MW-2 (see Item 24.e below).

e. General Progress/Unresolved Issues/Potential Schedule Impacts

- The two replacement wells (to be designated OPCA-MW-1RR and OPCA-MW-2R, respectively) will not be installed until completion of the sewer line re-routing being performed at Hill 78 Area-Remainder.
- Well 78-6 was buried under brush during the October 2007 sampling event and nearby well SCH-4 was inadvertently sampled in its place. For this reason, the preliminary analytical data from that well were incorrectly identified in the October 2007 monthly report as being from well 78-6. A revised data summary table referencing well SCH-4 is included with this report (Table 24-4). Well 78-6 was found prior to the Fall 2007 groundwater elevation monitoring event and was sampled in November 2007. Preliminary analytical results have not yet been received and will be included in the next monthly report.

f. Proposed/Approved Work Plan Modifications

FORMER OXBOWS A & C (GMA 5)
(GEC350)
NOVEMBER 2007

* All activities described below for this item were conducted pursuant to the Consent Decree.

a. Activities Undertaken/Completed

- Conducted Fall 2007 groundwater sampling and analysis activities under long-term groundwater monitoring program.
- Decommissioned EPA well BH00041.
- Installed wells GMA5-9 and GMA5-10 (see Item 25.f below).
- Conducted wipe sampling of augers used in association with the installation of wells GMA5-9 and GMA5-10, as identified in Table 25-1.

b. Sampling/Test Results Received

See attached tables. The groundwater elevation data table also includes a correction from the results included in the October 2007 monthly report. Groundwater elevation data attributed to well C-2 in that report were collected from EPA well BH00041 and revised data are presented.

c. Work Plans/Reports/Documents Submitted

None

d. Upcoming Scheduled and Anticipated Activities (next six weeks)

- Develop and survey wells GMA5-9 and GMA5-10.
- Sample wells GMA5-9 and GMA5-10.

e. General Progress/Unresolved Issues/Potential Schedule Impacts

The Fall 2007 Monitoring Event Evaluation Report is scheduled to be submitted within 60 days of receipt of the final laboratory data packages from the Fall 2007 sampling event. Following receipt of those data packages, GE will discuss the reporting schedule with EPA and will identify a specific submittal date in the next monthly report. In this connection, following GE's sampling of newly-installed wells GMA5-9 and GMA5-10 in early December 2007, GE and EPA will determine whether the report submittal schedule will be based on the receipt of data packages from those wells or from the GMA 5 wells that were sampled in November 2007.

f. Proposed/Approved Work Plan Modifications

Several underground utility lines were identified near the originally proposed locations of wells GMA5-9 and GMA5-10 during a preliminary reconnaissance conducted with the property owner and during utility markouts conducted by the City of Pittsfield. The presence of these lines necessitated the relocation of these wells to ensure that the lines were not damaged during drilling. GE reviewed the modified well locations in the field with EPA representatives and received approval of the new well locations prior to well installation in November 2007.

Re: NPDES Biomonitoring Report for November 2007
Submission #: R2740549

Dear Mr. Nicholson:

Enclosed is our report on the Acute Whole Effluent Toxicity testing conducted in November 2007. The Outfall Composite samples were collected on 11/6/07 at 9:50 am. The Housatonic River samples were collected on 11/6/07 at 7:30 am. The Outfall Composite and Housatonic River samples were analyzed at Columbia Analytical Services for total cyanide, ammonia, total organic carbon, total phosphorus, chloride, total solids, total suspended solids, total residual chlorine, and total metals. Dissolved metals were analyzed for only on the Outfall Composite samples. Results are presented in Appendix 2. The Outfall Composite and Housatonic River samples were sent directly by General Electric to Aquatec Biological Services for the acute aquatic toxicity testing including the analysis of alkalinity, hardness, specific conductance, and pH. Results are presented in Appendix 1.

Should you have any questions please contact me at (585)288-5380 x130.

Thank you for allowing us to provide this service.

Sincerely,

I. Summary

On November 5-6, 2007 sampling of wastewater discharges from the General Electric Company facility in Pittsfield MA was conducted in accordance with the wet weather toxicity testing requirement of the GE NPDES Permit MA0003891. Composite samples were collected from GE outfalls 001, 005-64T, 005-64G and 09B over a 24-hour period. These composite samples were combined in a flow-proportioned manner to generate a single wastewater sample that was shipped to Aquatec Biological Sciences in Williston, Vermont. A grab sample of Housatonic River water, to be used as dilution water in the toxicity test, was collected upstream of the GE discharges on November 6, 2007 and shipped to AquaTec along with the wastewater composite. AquaTec dechlorinated the composite sample prior to the acute toxicity test following the toxicity reduction procedures summarized in a letter dated November 11, 1993 to EPA Region I from JG Ruebesam of General Electric Company. The composite wastewater sample and the dilution water sample were tested for chemical constituents by O'Brien & Gere, Inc. and Columbia Analytical Services. The analytical results are summarized in Table I and the detailed laboratory test data are include as Appendices to this report. As a result of land transfer documents executed on April 27, 2005 and recorded in the Berkshire County Registry of Deeds on May 2, 2005, Outfalls 001 and 004 were transferred to the Pittsfield Economic Development Authority (PEDA). Outfalls 001 and 004 DMRs will no longer be submitted under the GE NPDES Permit No. MA0003891. However, GE's NPDES Permit requires that the metal and toxicity composites to be made by compositing samples from the following outfalls: 001, 004, 005, 007, and 009. These two composites will continue to include an aliquot of water from outfall 001 and outfall 004, and will be reported on GE's DMR until further actions by the Agencies.

The results from Aquatec Biological Sciences for the acute toxicity test on the wastewater discharge sample indicated a No Observed Acute Effect Level (NOAEL) of 100%.

II. Review of Toxicity Test Results

The wastewater discharge sample collected on November 5-6, 2007 was tested for 48-hour acute toxicity using *Daphnia pulex* organisms. The sample did not require dechlorination with sodium thiosulfate (Na₂S₂O₃) prior to toxicity testing. Aquatec Biological Sciences reported the results of this toxicity testing as follows:

Effluent toxicity as NOAEL =	100%
Effluent toxicity as LC ₅₀ =	>100%

No limit is established for wet weather NOAEL in the GE NPDES permit.

The following table summarizes the results of the control sample analyses performed by AquaTec during the acute toxicity bioassay:

<u>Control Analysis</u>	<u>Result</u>
Survival in 100% dilution water	100%
Survival in laboratory water	96%
Survival in laboratory water with 100 mg/L sodium thiosulfate	100%
LC ₅₀ for <i>Daphnia pulex</i> in sodium chloride reference toxicant solution	3.527g NaCl/L November 7, 2007

The *Daphnia* survival rates in control solutions of upstream dilution water, laboratory water and reference toxicant solution were within acceptable limits, indicating that the results of the toxicity test are valid.

III. Review of Wastewater Sampling Procedures

Composite samples of the individual NPDES wastewater discharges were collected over a 24-hour period. These samples were composited in a flow-weighted manner to generate a single combined discharge sample for toxicity testing and chemical analysis.

The 24-hour composite samples from the individual discharges were collected as follows:

Each automatic sampler (at outfall 001, 64T, 64G, and 09B) was programmed to collect approximately 7 liters of wastewater into a 10-liter glass container in a time-proportioned manner over a 24-hour period. Outfalls 004, 007, and 09A have been plugged and no longer flow.

All sample containers were packed in ice or refrigerated to keep the wastewater samples cold during the 24-hour collection period.

Flow meter readings were taken at the beginning and end of the 24-hour collection period to determine the total 24-hour flow for each wastewater discharge.

At the end of the 24-hour collection period, the discharge samples were taken to Building 64G where OB&G personnel composited these samples, in a flow weighted manner, to generate a single combined sample for the acute toxicity test and the chemical analyses, as follows:

The proportions of each individual discharge sample needed to produce a single combined sample were calculated from the flow measurements. The calculated sample volumes were then transferred from their original collection containers to a 2.5 or 5 gallon mixing container. The combined discharge sample was then split into various containers for toxicity testing and chemical analyses. These containers were shipped by vendor courier to AquaTec for toxicity testing and by FedEx (overnight) to Columbia Analytical Services for chemical analyses. All samples were chilled with ice packs during shipment.

A grab sample of Housatonic River water was collected on the second day of sampling at the Lyman Road Bridge in Hinsdale, MA, upstream of the GE site. This sample was split for chemical analysis and toxicity testing in a similar manner as the combined effluent sample (see above).

Details of the times and dates of sample collection as well as the names of the individuals collecting and transporting the samples are provided on the chain of custody forms in Appendix 3 of this report.

IV. Review of Individual NPDES Discharges

The following is a brief description of each of the seven outfalls that are monitored for acute and chronic toxicity in accordance with NPDES Permit MA0003891 issued to the General Electric Company, Pittsfield, MA.

1. Outfall 001 is permitted to discharge storm water runoff from the oil/water separator in Building 31W to Silver Lake.
2. Outfall 004 is permitted to discharge storm water runoff to Silver Lake. (**Outfall plugged**)
3. Outfall 005 is permitted to discharge contact cooling water, non-contact cooling water, treated process water and storm water runoff from the Wastewater Treatment Plant in Building 64T, and treated groundwater from the Groundwater Treatment Plant in Building 64G to the Housatonic River. Monitoring samples are collected separately from the effluents of 64G and 64T. Both samples are included in the flow composite sample used for toxicity testing.
4. Outfall 007 is permitted to discharge stormwater runoff to the Housatonic River. (**Outfall plugged**)
5. Outfall 09A is permitted to discharge non-contact cooling water and stormwater runoff to Unkamet Brook. (**Outfall plugged**)
6. Outfall 09B is permitted to discharge non-contact cooling water, treated process water and stormwater runoff from the oil/water separator in Building 119W to Unkamet Brook.

Dear Mr. Beechler:

Enclosed please find one bound and one unbound copies of our report of the results for whole effluent toxicity testing of samples received from GE Pittsfield, Massachusetts on November 7, 2007.

According to the Chain-of-Custody documentation the samples for Whole Effluent Toxicity (WET) Testing were collected on November 6, 2007. The samples were transported to Aquatec Biological Sciences, Inc. by courier and delivered on November 7, 2007. The effluent sample (Sample 36370) was logged in for the acute 48-hour static toxicity test with *Daphnia pulex*. The receiving water sample (Sample 36585) was logged in for dilution water. A sub-sample of each sample was checked for residual chlorine and for alkalinity and hardness measurements at Aquatec Biological Sciences, Inc. The toxicity test was started on November 7, 2007, within the specified holding time.

At the conclusion of the toxicity test on November 9, 2007, a final count of surviving organisms was completed. The average survival was 96-100 percent in all test concentrations. Acute toxicity was not detected, and the 48-hour LC50 was reported as >100% effluent (Section 4.1 of the report).

If you have any questions regarding the report, please call Dr. Philip C. Downey or me.

Sincerely,

John Williams

1.0 Introduction

1.1 Background

In 1972, amendments were made to the Clean Water Act (CWA) prohibiting the discharge of any pollutant from a point source to waters of the United States, unless the discharge is authorized by a National Pollutant Discharge Elimination System (NPDES) permit. Since the passing of the 1972 amendments to the CWA, significant progress has been made in cleaning up industrial wastewater and municipal sewage point source discharges. EPA defines point sources as discrete discharges via pipes or man-made ditches.

In 1984, the U.S. Environmental Protection Agency (EPA) released a national policy statement and a supporting document that recommended, where appropriate, effluent permit limits should be based on effluent toxicity as measured in aquatic toxicity tests. Generally, permits require that no toxic discharge occur in toxic amounts. The routine use of dilution-series toxicity tests and/or biologically-based criteria (i.e., invertebrate and vertebrate community studies) have become increasingly utilized to calculate or estimate the potential toxicity of a discharge.

EPA has the authority to delegate primary responsibility for the implementation, permitting, and enforcement of NPDES regulations to appropriate State regulatory agencies. Even when EPA delegates this authority to the states, EPA still maintains oversight responsibility.

1.2 Objective of the General Electric Study

The objective of this study was to measure the acute toxicity of the composite wastewater discharged by the General Electric facility located in Pittsfield, Massachusetts to the Housatonic River. The water flea, *Daphnia pulex*, is exposed to effluent and dilutions of effluent under static conditions. *Daphnia pulex* is routinely used by regulatory agencies and by contract laboratories for toxicity testing and EPA has published guidance documents for the performance of this test (U.S. EPA, 2002).

A toxicity test was conducted from November 7-9, 2007 at Aquatec Biological Sciences, Inc. (Aquatec) located in Williston Vermont. Aquatec Biological Sciences, Inc. holds NELAC accreditation for the requested whole effluent toxicity test. All original raw data and the final report produced for this study are stored in Aquatec's archives in Williston, Vermont.

2.0 Materials and Methods

2.1 Protocol

Procedures used in this acute toxicity test followed those described in the Aquatec Standard Operating Procedure (SOP) TOX2-001, *Daphnid Acute R5*, July 4, 2006. This SOP generally follows the standard methodology presented in U.S. EPA. 2002 (EPA-821-R-02-012). *Methods for Measuring the Acute Toxicity of Effluents and Receiving Waters to Freshwater and Marine Organisms*, 5th Ed.,

December 2002, Method 2021.0 (as summarized in Appendix 2 of this report). A copy of the SOP is located in Appendix 6 (Controlled document, please do not copy or distribute.)

Additional SOPs used in this study are outlined below:

2.2 Effluent and Receiving Water Samples

The effluent sample (Outfall Composite A8621C) was collected by GE personnel on November 6, 2007. The receiving water sample (Housatonic River A8622R) was a grab collected from the Housatonic River on November 6, 2007. Samples were delivered to Aquatec on November 7, 2007. Upon receipt at Aquatec, the temperature of the temperature blank contained within the cooler was 3°C. The effluent and receiving water were prepared for testing and characterized (Table 1). The receiving water was the dilution water for preparing effluent concentrations and was also the reference control for statistical comparisons.

2.3 Control water

Laboratory control water for the toxicity test was a 1:1 mixture of laboratory reconstituted moderately hard water and 60-micron filtered river water collected from the Lamoille River, Vermont. This water was characterized for the following parameters: pH (7.4); dissolved oxygen (9.1 mg/L); conductivity (224 uS/cm). An additional dechlorination control (laboratory water with 0.2 N sodium thiosulfate added) was included in the test array, even though chlorine was not detected in the effluent sample.

2.4 Test Organism

Daphnids (*Daphnia pulex*), less than 24-hours old were obtained from Aquatec laboratory cultures. The culture system consisted of several 1-liter glass beakers containing approximately 1-liter of culture medium and up to approximately 100 daphnids. The culture water was laboratory reconstituted moderately hard water. Prior to use, the culture water was characterized:

Parameter	Result
Total hardness (mg/L)	Within range of 80-110 mg/L
Alkalinity (mg/L as CaCO ₃)	Within range of 60-70 mg/L
pH	Nominal 7.7 – 8.0

The culture area was maintained at a nominal temperature of 20°C (range 19 – 21 °C) with a regulated photoperiod of 16 hours light and 8 hours of darkness.

Daphnid cultures were fed a combination of green algae (*Selenastrum capricornutum*) and YCT obtained from Aquatic BioSystems of Fort Collins, Colorado. The cultures were fed a ration of *Selenastrum* and YCT daily Monday through Friday. Daphnids were transferred to new culture medium weekly.

Approximately 24 hours before toxicity test initiation, all daphnid neonates were removed from the culture beakers. Offspring produced within 24 hours were used for toxicity testing.

2.5 Test Procedures

Prior to initiating the toxicity test, a sub-sample of effluent and receiving water was decanted for subsequent alkalinity and hardness determination. A sub-sample was also checked for presence of chlorine to determine whether dechlorination of effluent is required. Chlorine was not detected, therefore dechlorination of the effluent was not required. The sample was then aerated and warmed to test temperature.

The toxicity test was conducted at effluent concentrations of 100%, 75%, 50%, 35%, 15%, and 5% effluent. Test concentrations were prepared by diluting the appropriate volume of effluent with dilution water to a total volume of 400 mL. Test solutions were then decanted to five replicate 30-mL cups per concentration, each containing approximately 20 mL of test solution. Three sets of control replicates were also included in the test array, set up as the effluent replicates. The controls included: Housatonic River water (dilution control), a laboratory control (a mix of moderately hard water and Lamoille River, VT water), and a laboratory control with sodium thiosulfate added (dechlorination control). The dechlorination control was included in the test array even though residual chlorine was not detected in the effluent.

Prior to testing, daphnids less than 24-hours old were collected from the cultures, pooled in Carolina bowl, and fed. The test was initiated when the daphnid neonates were transferred to the replicate test cups, five daphnids per cup. The toxicity test cups were incubated to maintain temperature in the range of 19°C to 21°C. The lighting cycle was 16 hours light and eight hours dark and a luminance of approximately 80 ft-c.

2.6 Test Monitoring

The number of surviving daphnids was observed at approximately 24-hour intervals during the test, with the final count of surviving daphnids at approximately 48 hours. Temperature was measured daily in one replicate of each test treatment. The parameters of pH, dissolved oxygen, and conductivity were measured at the beginning and the end of the test.

Total hardness was measured by the EDTA titrimetric method and total alkalinity was measured by potentiometric titration to an endpoint of 4.5. The check for residual chlorine was performed with an acidified sample to which potassium iodide and starch indicator added. If chlorine was detected, the color was titrated away with 0.02 N sodium thiosulfate to determine the equivalent volume of 0.2 N sodium thiosulfate to add to effluent (if needed).

Dissolved oxygen was measured with a YSI Model 58 dissolved oxygen meter. A Beckman Phi 40 was used to measure pH. A Thermo-Orion Model 145 conductivity meter was used to measure conductivity. Salinity was measured with an Atago salinity refractometer.

2.7 Reference Toxicant Test

A 48-hour standard reference toxicant (SRT) test was conducted concurrently with the effluent toxicity test. The SRT test was conducted as a quality control procedure to establish the health and sensitivity of the test organisms. The SRT included four concentrations of reagent grade sodium chloride (NaCl) with nominal concentrations of 0.75, 1.5, 3.0, 6.0, and 12 g NaCl/L. Four test replicates, each containing five daphnid neonates were test at each concentration and the laboratory control.

3.0 Statistics

3.1 Statistical protocol

The concentration-response relationships observed were characterized by the median lethal concentration (LC50), which was the calculated concentration lethal to 50 percent of the test organisms. If no concentrations resulted in 50% mortality, the LC50 was reported as greater than the highest concentration effluent (in this case >100% effluent), by direct observation. If greater than 50 percent mortality was observed in any effluent treatment, then a computer program (TOXIS2) was used to calculate the LC50 value, following the U.S. EPA statistical flowchart (Appendix 3).

The Acute-No-Observable-Effect Concentration (A-NOEC) was determined statistically using multiple comparison tests (TOXIS2), with the receiving water control as the reference.

4.0 Results

4.1 Effluent Toxicity Test

Results of effluent and receiving water characterizations performed at Aquatec as part of the toxicity test are presented in Table 1. Water quality parameters measured during the toxicity test are presented in Table 2. Measured temperatures during the test were within the range of 18.2°C to 21°C. The percent mortality data for the toxicity test are presented in Table 3. Acute toxicity

was not demonstrated during this evaluation. The 48-hour LC50 value was >100% effluent. The A-NOEC was 100% effluent.

4.2 Reference Toxicant Test

A standard reference toxicant (SRT) test was performed concurrently with the effluent toxicity test, using the same batch of daphnid neonates. The resulting 48-hour LC50, calculated by the Spearman-Kärber method, was 3.527 g NaCl/L with 95% confidence intervals of 3.01- 4.13 g/L. This LC50 value was within the Control Chart limits generated for tests in our laboratory.

5.0 Qualifiers

5.1 Qualifiers and Special Conditions

To the best of our knowledge, there are no special conditions or qualifiers that apply to the reported toxicity test.
