Upper ½ Mile Reach Removal Action**Table 2-1****Chemical-Specific ARARs**

Regulation	Citation	Criterion/Standard	Applicability/Appropriateness	Determination Regarding Attainment
Federal ARARs				
Clean Water Act, Ambient Water Quality Criteria	33 USC 1314 40 CFR 131.36(b)(1) 63 Fed. Reg. 68359	<p>National recommended criteria for surface water quality.</p> <p>PCB Criteria:</p> <p>For protection of freshwater aquatic life due to chronic exposure: 0.014 ppb</p> <p>For protection of human health from consumption of water and organisms: 0.00017 ppb</p> <p>Various numerical criteria for other constituents.</p>	Relevant and appropriate for in-stream evaluation.	Surface water monitoring for PCBs will be conducted during and after Removal Action. See Section 11.2 of Work Plan. If criteria for PCBs are not attained -- or if future monitoring for other constituents (if any) indicates that criteria for such constituents are not attained in-stream -- no further response actions to attain the criteria shall be required as part of this Removal Action (beyond the actions described in this Work Plan), because EPA has determined that such further response actions are not practicable as they are beyond the scope of the Removal Action.
State ARARs				
Mass. Water Quality Standards	314 CMR 3.10(3) 314 CMR 4.05(5)(e)	Establishes federal water quality criteria as allowable water quality concentrations; allows for site-specific limit where federal criteria are "invalid" due to site-specific conditions.	Relevant and appropriate for in-stream evaluation.	See above discussion of federal water quality criteria.

Upper ½ Mile Reach Removal Action**Table 2-1****Chemical-Specific ARARs**

Regulation	Citation	Criterion/Standard	Applicability/Appropriateness	Determination Regarding Attainment
Guidances Considered				
Cancer Slope Factors (CSFs)	---	Guidance values used to evaluate the potential carcinogenic hazard caused by exposure to contaminants.	To be considered.	EPA considered this guidance in the development of this Removal Action.
Reference Doses (RfDs)	---	Guidance values used to evaluate the potential non-carcinogenic hazard caused by exposure to contaminants.	To be considered.	EPA considered this guidance in the development of this Removal Action.
PCBs: Cancer Dose - Response Assessment and Application to Environmental Mixtures	EPA/600/P-96/001F (September 1996)	Guidance regarding EPA's reassessment of the carcinogenicity of PCBs. It includes revised cancer slope factors for PCBs based upon the exposure pathway.	To be considered.	EPA considered this guidance in the development of this Removal Action.

Upper ½ Mile Reach Removal Action**Table 2-2****Action-Specific ARARs**

Regulation	Citation	Criterion/Standard	Applicability/Appropriateness	Determination Regarding Attainment
A. Excavation of Bank Soils and River Sediments (including installation of sheet piling to partially re-route river) and Covering/Restoration of Excavated Areas				
Federal ARARs				
TSCA Regulations re PCB Remediation Waste	40 CFR 761.61(c)	Establishes cleanup options for PCB remediation waste, including PCB-contaminated soils and sediments. Options include risk-based approval by USEPA. Parties seeking risk-based approval must demonstrate that cleanup plan will not pose an unreasonable risk of injury to health or the environment.	Applicable	Will be attained based on USEPA finding that removal action conducted in accordance with this Work Plan will result in no unreasonable risk of injury to health or the environment.
TSCA Regulations re Decontamination	40 CFR 761.79	Establishes decontamination standards and procedures for removing PCBs from non-porous surfaces.	Applicable to decontamination of equipment and sheet piling used in excavation and restoration activities.	Will be attained.

Upper 1/2 Mile Reach Removal Action**Table 2-2****Action-Specific ARARs**

Regulation	Citation	Criterion/Standard	Applicability/Appropriateness	Determination Regarding Attainment
A. Excavation of Bank Soils and River Sediments (including installation of sheet piling to partially re-route river) and Covering/Restoration of Excavated Areas (cont'd)				
Federal ARARs (cont'd)				
Clean Water Act NPDES Regulations (Stormwater Discharges)	40 CFR 122.26(c)(1) (ii)(C) 40 CFR 122.44(k) 40 CFR 125.100-.104	Best management practices to control pollutants in storm water discharges during construction activities.	Applicable.	Will be attained through the adoption of best management practices for erosion and sedimentation control to minimize the potential for rainfall or flood-induced migration of soils from disturbed areas. See Sections 6.3 and 8.4.5 of Work Plan.
State ARARs				
Mass. Air Pollution Control Requirements	310 CMR 7.09	Prohibition against creating condition of air pollution in connection with dust-generating activity.	Applicable to construction activities generating dust.	Will be attained. GE will conduct air monitoring for PM ₁₀ and any exceedances will be reported and addressed promptly. See Section 11.4 of Work Plan.

Upper 1/2 Mile Reach Removal Action**Table 2-2****Action-Specific ARARs**

Regulation	Citation	Criterion/Standard	Applicability/Appropriateness	Determination Regarding Attainment
B. Discharge of Treated Waters to Housatonic River				
Federal ARARs				
Clean Water Act, NPDES Regulations	33 USC 1342 40 CFR 122, esp. 122.44(a), (e) 40 CFR 125.1-125.3	BAT effluent limits for toxic and non-conventional pollutants; BCT limits for conventional pollutants; water-quality based effluent limitations. Discharges in accordance with instructions of On-Scene Coordinator acting pursuant to NCP are exempt from NPDES permit requirements.	Applicable to point source discharges of treated waters to Housatonic River.	Will be attained. Discharges from GE's existing Groundwater Treatment Facility will meet existing NPDES permit limits, and discharges from portable treatment plant will meet emergency limits identical to those established for Building 68 removal action (0.5 ppb PCBs).
	40 CFR 125.100-104	Best management practices to prevent release of toxics to surface water from ancillary areas or spills.	Same as above.	Same as above.

Upper 1/2 Mile Reach Removal Action**Table 2-2****Action-Specific ARARs**

Regulation	Citation	Criterion/Standard	Applicability/Appropriateness	Determination Regarding Attainment
B. Discharge of Treated Waters to Housatonic River (cont'd)				
Federal ARARs (cont'd)				
TSCA Regulations	40 CFR 761.50(a)(3)	Prohibits discharge of water containing PCBs to navigable waters unless PCB concentration is < approximately 3 ppb or in accordance with discharge limits of NPDES permit.	Applicable to discharge of treated waters to Housatonic River.	Will be attained. See discussion of federal Clean Water Act NPDES regulations above.
State ARARS				
Mass. Clean Water Act - Discharge Regulations and Water Quality Standards	314 CMR 3.10 314 CMR 3.19 314 CMR 4.05(5)(e)	Effluent limitations and other conditions for point source discharges; state water quality standards.	Applicable to point source discharges of treated waters to Housatonic River.	For effluent discharges, see discussion of federal Clean Water Act NPDES regulations above. For in-stream attainment, see Table 2-1.

Upper 1/2 Mile Reach Removal Action**Table 2-2****Action-Specific ARARs**

Regulation	Citation	Criterion/Standard	Applicability/Appropriateness	Determination Regarding Attainment
C. Temporary On-Site Storage/Accumulation of Excavated Sediments and Soils				
Federal ARARs				
TSCA Regulations	40 CFR 761.61(c)	Provides for risk-based approval from USEPA to store PCB-remediation waste based upon demonstration that storage plan will not pose an unreasonable risk of injury to health or the environment.	Applicable.	Will be attained based on USEPA finding that storage conducted in accordance with Section 10.3 of Work Plan will result in no unreasonable risk of injury to health or the environment. Note that temporary storage areas will be lined with synthetic material and stored material will be covered by impermeable material. Temporary storage requirements for marking and inspections will be met.
D. Permanent On-Site Consolidation of Excavated Sediments and Soils				
ARARs to be listed in Statement of Work for Removal Actions Outside the River (to be attached to Consent Decree).				

Upper 1/2 Mile Reach Removal Action**Table 2-2****Action-Specific ARARs**

Regulation	Citation	Criterion/Standard	Applicability/Appropriateness	Determination Regarding Attainment
E. Other				
Federal ARARs				
TSCA PCB Spill Cleanup Policy	40 CFR 761, Subpart G (§ 761.120 et seq.)	Policy used to determine adequacy of cleanup of spills resulting from the release of materials containing PCBs at concentration of 50 ppm or greater.	TBC for PCB spills or leakage from cleanup.	GE will consider and address cleanup policy for any new PCB spills that occur during the work.

Upper 1/2 Mile Reach Removal Action**Table 2-3****Location-Specific ARARs**

Regulation	Citation	Requirements	Applicability/Appropriateness	Determination Regarding Attainment
A. Rivers and Streams				
Federal ARARs				
Fish & Wildlife Coordination Act Requirements	16 USC 662, 663 40 CFR 6.302(g)	Requires development of measures to prevent, mitigate, and compensate for loss of fish and wildlife resources to the maximum extent possible.	Relevant and appropriate.	Will be attained by conducting in-stream work using phased approach that will include precautions against erosion and scour of river sediments and bank soils, and by restoring aquatic habitat. See Sections 6.3, 7, and 9.1 of Work Plan.

Upper ½ Mile Reach Removal Action**Table 2-3****Location-Specific ARARs**

Regulation	Citation	Requirements	Applicability/Appropriateness	Determination Regarding Attainment
A. Rivers and Streams (cont'd)				
Federal ARARs (cont'd)				
Clean Water Act § 404 Requirements	33 USC 1344 33 CFR Parts 320-323 40 CFR 230	For discharge of dredged or fill material into water bodies or wetlands, there must be no practicable alternative with less adverse impact on aquatic ecosystem; discharge cannot cause or contribute to violation of state water quality standard or toxic effluent standard or jeopardize threatened or endangered (T&E) species; discharge cannot significantly degrade waters of U.S.; must take practicable steps to minimize and mitigate adverse impacts; must evaluate impacts on flood level, flood velocity, and flood storage capacity.	Applicable to discharge of dredged or fill material to waters of U.S.	Based on analyses in sections 5.3, 6.3, 7, 8, and 9 of Work Plan, will be attained in part because (a) there is no practical alternative with less adverse impact; (b) all practical measures will be taken to minimize and mitigate any adverse impacts from the work; (c) habitat assessment indicates no likely impact on T&E species; (d) actions will be taken to minimize impact of hydrologic changes during the work; (e) after completion of the work, there will be no significant net loss of flood storage capacity, and no significant net increase in flood stage or velocities; and (f) river and river banks will be restored and habitat will be improved. To the extent that discharges occurring during performance of the Removal Action may cause or contribute to exceedances of state water quality standards or toxic effluent standards or to degradation of water quality, EPA has determined that it is not practicable to avoid such temporary impacts while work is being conducted.

Regulation	Citation	Requirements	Applicability/Appropriateness	Determination Regarding Attainment
A. Rivers and Streams (cont'd)				
State ARARs				
Mass. Clean Water Act - Water Quality Certification Regulations	314 CMR 9.06	For discharge of dredged or fill material, there must be no practicable alternative with less adverse impact on aquatic ecosystem; must take practicable steps to minimize adverse impacts on wetlands or land under water; stormwater discharges must be controlled with BMPs; must be no substantial adverse impact to physical, chemical, or biological integrity of surface waters.	Applicable to dredging of waters of U.S. within Mass.	Will be attained because (a) there is no practicable alternative with less adverse impact on the aquatic ecosystem; (b) all practical measures will be taken to minimize adverse impacts on wetlands and land under water; (c) stormwater discharges will be controlled through BMPs; and (d) there will be no substantial long-term adverse impacts to integrity of river waters. See Sections 6.3, 7, 8, and 9 of Work Plan.
	314 CMR 9.07	Hydraulic or mechanical dredging allowed; must avoid fisheries impacts.	Applicable to dredging of waters of U.S. within Mass.	Will be attained. There are no significant fisheries in area at present and aquatic habitat will be restored. See Sections 5.1 and 9.1 of Work Plan.

A. Rivers and Streams (cont'd)				
State ARARs (cont'd)				
Mass. Wetlands Protection Act and Regulations	MGL c. 131 § 40 310 CMR 10.53(3)(q) 310 CMR 10.54, 10.56-.58	Actions responding to the release or threat of release of hazardous materials must, to the maximum extent practicable, avoid/minimize hydrological and other adverse impacts; use BMPs to prevent erosion/siltation; implement mitigating measures; provide compensatory storage for lost flood storage capacity; avoid increase in flood stage or velocity; and restore disturbed vegetation. In addition, there must be no practical alternatives to the project consistent with the MCP that would be less damaging to resource areas.	Applicable to response action activities altering or within 100 feet of stream banks or land underlying Housatonic River or altering floodplain or riverfront area.	Will be attained because (a) there is no practicable alternative that would be less damaging to resource areas; (b) all practical measures will be taken to minimize adverse impacts on wetlands; (c) stormwater discharges will be controlled through BMPs; (d) actions will be taken to minimize impact of hydrologic changes during the work to the extent practicable; (e) after completion of the work, there will be no significant net loss of flood storage capacity and no significant net increase in flood storage or velocities; and (f) disturbed vegetation will be restored. See Sections 6.3, 7, 8, and 9 of Work Plan.

Federal ARARs				
Executive Order for Wetlands Protection	Exec. Order 11990 (1977) 40 CFR 6.302(a) 40 CFR Part 6, App. A	Actions in wetlands must avoid adverse impacts on wetlands where possible, minimize wetland destruction, and preserve wetlands value.	Relevant and appropriate.	Will be attained because there is no practical alternative to work in wetlands with less adverse impact and all practicable measures will be taken to minimize and mitigate any adverse impacts. Erosion and sedimentation control measures will be adopted during removal and restoration activities, and habitat will be restored and enhanced. See Section 6.3, 8.4.5, and 9.2 of Work Plan.
Executive Order for Floodplain Management	Exec. Order 11988 (1977) 40 CFR Part 6, App. A. 40 CFR 6.302(b)	Actions in floodplain must avoid/minimize adverse effects to floodplain and restore/preserve natural values where practicable.	Relevant and appropriate.	Will be attained because there is no practical alternative to work in floodplains with less adverse impact and all practicable measures will be taken to minimize and mitigate any adverse impacts. Erosion and sedimentation control measures will be adopted during removal and restoration activities, habitat will be restored and enhanced, and flood storage capacity will be restored. See Sections 6.3, 7.5, 8.4.5, and 9.2 of Work Plan.

TABLE 4-1**GENERAL ELECTRIC COMPANY - PITTSFIELD, MA
HOUSATONIC TIVER UPPER REACH - FIRST 1/2 MILE****APPIX+2 SEDIMENT DATA
(ppm, dry weight)**

Notes:

ND (0.36) - Constituent was not detected. The number in parenthesis is the associated detection limit.

NA - Constituent background data is not available.

J - Indicates an estimated value less than the method detection limit.

J* - Indicates an estimated value between the Contact Laboratory Program required limit and the instrument detection limit.

B - Constituent was also detected in the associated method blank.

E - Concentration exceeded calibration range.

R - Indicates a rejected result.

N - Spiked sample recovery is not within control limits.

Constituents presented in this table indicate that at least one detection of the constituent has occurred at the site.

Total 2,3,7,8-TCDD toxic equivalents (TEQs) were calculated using the World Health Organization's Toxicity Equivalent Factors (TEFs) for all PCDD/PCDF congeners.

Shading indicates polygon removed as part of this Work Plan.

Notes:

Background data includes all available upstream data.

Backfill concentrations for Semivolatile Organics, Furans, Dioxins, and Inorganics are based on the analytical results of samples collected as part of the confirmatory backfill sampling program described in GE's letter to the Agencies data November 14, 1997.

As backfill analyses for Organopesticides were not specified under the confirmatory backfill sampling program, the backfill concentration for these constituents (with the exception of Kepone) were calculated based on a subset of "clean" background samples collected as part of the offsite residential properties sampling program. Due to unusually high method detection limits for these analytes, backfill concentrations assume the analytes would be present at the minimum detection limit.

Maximum, minimum, and average concentrations are calculated on a post-removal basis.

One-half the detection limit is used in calculating the post-removal average.

The maximum concentration represents either the maximum detected concentration, or in case where analytes not detected, one-half the maximum detection limit.

REMOVAL ACTION WORK PLAN - UPPER 1/2 MILE OF HOUSATONIC RIVER

APPIX+3 SOIL DATA
(ppm, dry-weight)

Notes:

- 1) Samples were collected by USEPA, and were submitted for analysis of Appendix IX+3 constituents.
- 2) ND - Analyte was not detected. The number in parentheses is the associated detection limit.
- 3) [] - Indicates USEPA duplicate sample result.
- 4) { } - Indicates GE split sample result.
- 5) J - Indicates an estimated value less than the CLP-required quantitation limit.
- 6) B - Analyte was also detected in the associated method blank.
- 7) R - Indicates a rejected result.
- 8) NS - Not Sampled - Parameter was not requested on sample chain of custody form.
- 9) Total 2,3,7,8-TCDD toxicity equivalents (TEQs) were calculated using the World Organization's Toxicity Equivalent Factors (TEFs) for all PCDD/PCDF congeners.
- 10) Sample results in this table are presented for those constituents detected at least once within a given area.
- 11) Shading indicates soil areas subject to removal.

TABLE 4-4

GENERAL ELECTRIC COMPANY
PITTSFIELD, MASSACHUSETTS
APPENDIX IX+3 BANK SOIL DATA SUMMARY TABLE (ppm)

Notes:

Step 1 - Eliminate PCB polygons, and apply backfill concentrations to calculate post-PCB removal residuals for Appendix IX + 3 constituents.

Step 2 - Compare maximum detected concentration to USEPA Region 9 residential Preliminary Remediation Goals (PRGs) (except for dioxins/furans).

USEPA Region 9 Preliminary Remediation Goals (PRGs) were downloaded from USEPA Region 9 website ([http://www.epa.gov/region 09/](http://www.epa.gov/region_09/)) on February 10, 1999. PRG values are displayed as rounded numbers. For polycyclic aromatic hydrocarbons (PAHs) for which Region 9 PRGs do not exist, the Region 9 PRGs for benzo(a)pyrene was used for carcinogenic constituents and the Region 9 PRG for naphthalene was used for non-carcinogenic constituents. For endrin aldehyde, the PRG for endrin was used, and the PRG for 1,1,2,2-tetrachloroethane was used for pentachloroethane. The PRG for 3 & 4-Methylphenol was used for 4-Methylphenol. If the maximum concentration was greater than the PRG, the constituent was retained for further evaluation. For dioxins and furans, TEQ values were calculated using Toxicity Equivalency Factors (TEFs) published by the World Health Organization [Vandenbergh et al., Environmental Health Perspectives 106(2) (December 1998)], and compared to USEPA-approved PRGs based on USEPA PRG of 0.001 ppm for dioxin in soil in residential areas (OSWER Directive 9200.4-26, April 13, 1998).

Step 3 - Maximum detected concentration and the median concentration were compared to "regional" background (upstream surficial floodplain data) using summary statistics per MDEP risk characterization guidance. Data found to be consistent with background were eliminated from further consideration.

Step 4 - The arithmetic average concentration of each remaining constituent for each subarea was compared to the appropriate MCP Method 1 standards. In this case, the more conservative of GW2/S-2 or GW3/S-2 was used.

MCP Method 1 standards are from 310 CMR 40.0975.

Per discussions with the Agencies, data for kepone and dieldrin were rejected and not considered in this evaluation.

ND - Compound analyzed for but not detected.

NA - Not available.

--- MCP soils standard comparison unnecessary for constituent.

TABLE 4-5

GENERAL ELECTRIC COMPANY
PITTSFIELD, MASSACHUSETTSAREA 1 TOP FOOT APPENDIX IX+3 COMPARISON TO PRGs
(ppm, dry weight)**Notes:**

Step 1 - Eliminate PCB polygons, and apply backfill concentrations to calculate post-PCB removal residuals for Appendix IX + 3 constituents.

Step 2 - Compare maximum detected concentration to USEPA Region 9 residential Preliminary Remediation Goals (PRGs) (except for dioxins/furans).

USEPA Region 9 Preliminary Remediation Goals (PRGs) were downloaded from USEPA Region 9 website (<http://www.epa.gov/region09/>)

on February 10, 1999. PRG values are displayed as rounded numbers. For polycyclic aromatic hydrocarbons (PAHs) for which Region 9 PRGs

do not exist, the Region 9 PRGs for benzo(a)pyrene was used for carcinogenic constituents and the Region 9 PRG for naphthalene was used for non-carcinogenic constituents.

For endrin aldehyde, the PRG for endrin was used, and the PRG for 1,1,2,2-tetrachloroethane was used for pentachloroethane. The PRG for 3 & 4-Methylphenol was used for 4-Methylphenol.

If the maximum concentration was greater than the PRG, the constituent was retained for further evaluation. For dioxins and furans, TEQ values were

calculated using Toxicity Equivalency Factors (TEFs) published by the World Health Organization [Vandenbergh et al., Environmental Health Perspectives 106(2)

(December 1998)], and compared to USEPA-approved PRGs based on USEPA PRG of 0.001 ppm for dioxin in soil in residential areas (OSWER Directive 9200.4-26, April 13, 1998).

MCP Method 1 standards are from 310 CMR 40.0975.

Per discussions with the Agencies, data for kepone and dieldrin were rejected and not considered in this evaluation.

Maximum concentration calculated on a Post-PCB-removal basis.

Constituents exceeding PRG are subject to further evaluation per Performance Standard #9.

TABLE 4-6

GENERAL ELECTRIC
PITTSFIELD, MA
APPENDIX IX + 3 BANK SOIL PERFORMANCE STANDARD # 9 COMPLIANCE
POST-PCB POST-APPENDIX IX+3 REMOVAL DATA

Notes:

Step 1 - Eliminate PCB polygons, and apply backfill concentrations to calculate post-PCB removal residuals for Appendix IX + 3 constituents.

Step 2 - Compare maximum detected concentration to USEPA Region 9 residential Preliminary Remediation Goals (PRGs) (except for dioxins/furans).

USEPA Region 9 Preliminary Remediation Goals (PRGs) were downloaded from USEPA Region 9 website (http://www.epa.gov/region_09/)

on February 10, 1999. PRG values are displayed as rounded numbers. For polycyclic aromatic hydrocarbons (PAHs) for which Region 9 PRGs

do not exist, the Region 9 PRGs for benzo(a)pyrene was used for carcinogenic constituents and the Region 9 PRG for naphthalene was used for non-carcinogenic constituents.

For endrin aldehyde, the PRG for endrin was used, and the PRG for 1,1,2,2-tetrachloroethane was used for pentachloroethane. The PRG for 3 & 4-Methylphenol was used for 4-Methylphenol.

If the maximum concentration was greater than the PRG, the constituent was retained for further evaluation. For dioxins and furans, TEQ values were

calculated using Toxicity Equivalency Factors (TEFs) published by the World Health Organization [Vandenberg et al., Environmental Health Perspectives 106(2)

(December 1998)], and compared to USEPA-approved PRGs based on USEPA PRG of 0.001 ppm for dioxin in soil in residential areas (OSWER Directive 9200.4-26, April 13, 1998).

Step 3 - Maximum detected concentration and the median concentration were compared to "regional" background (upstream surficial floodplain data)

using summary statistics per MDER risk characterization guidance. Data found to be consistent with background were eliminated from further consideration.

Step 4 - The arithmetic average concentration of each remaining constituent for each subarea was compared to the appropriate MCP Method 1 standards. In this case,

the more conservative of GW2/S-2 or GW3/S-2 was used.

MCP Method 1 standards are from 310 CMR 40.0975.

Per discussions with the Agencies, data for kepone and dieldrin were rejected and not considered in this evaluation.

ND - Compound analyzed for but not detected.

NA - Not available.

--- MCP soils standard comparison unnecessary for constituent.

Maximum, median, and arithmetic average concentrations are calculated on a Post-PCB and Post-Appendix IX + 3 removal basis.

Removal Action Work Plan - Upper ½-Mile Reach of Housatonic River

Plant Species Observed along the Housatonic River, First Half Mile
November 1998

Scientific Name	Common Name
<i>Acer saccharinum</i>	Silver maple
<i>Acer platanoides</i>	Norway maple
<i>Acer negundo</i>	Box elder
<i>Achillea millefolium</i>	Common yarrow
<i>Alliaria officinalis (petiolata)</i>	Garlic mustard
<i>Andropogon sp.</i>	Grass
<i>Asparagus officinalis</i>	Garden fern asparagus
<i>Aster sp.</i>	Aster
<i>Aster divaricatus</i>	White wood aster
<i>Berberis thunbergii</i>	Japanese barberry
<i>Betula papyrifera</i>	Paper birch
<i>Carex sp.</i>	Sedge
<i>Celastrus scandens</i>	American bittersweet
<i>Chimaphila maculata</i>	Striped or Spotted Wintergreen
<i>Cornus stolonifera</i>	Red-osier dogwood
<i>Cornus amomum</i>	Silky dogwood
<i>Elymus sp.</i>	Rye
<i>Epipactis helleborine</i>	Helleborine
<i>Equisetum arvense</i>	Field horsetail
<i>Eunonymus sp.</i>	Strawberry bush
<i>Eupatorium rugosum</i> (<i>Ageratina altissima</i>)	White snakeroot
<i>Fagus grandifolia</i>	American beech
<i>Fragaria virginiana</i>	Virginia strawberry
