

Southern Sierra Geographic Information Cooperative (SSGIC) Goals

11/8/2000

- The most important seamless data is developed and complies with National Spatial Data Infrastructure requirements.
- Data is readily accessible and available.
- Standard business processes that optimize long-term interagency information collaboration are implemented and effectively communicated.
- Interagency consensus is reached regarding analysis methods and procedures.
- Develop/Implement Analysis Methods and Procedures.
- Project Plan is managed as a dynamic and useful guide for meeting the goals of SSGIC.
- An interagency collaboration system based on web technologies is developed.
- Project meets the requirements of the Joint Fire Sciences Program.
- Written protocols and guidelines are drafted to facilitate Project replication.
- Use a fuels analysis to identify treatment areas (risk, hazard, and values) and develop a multi-year fuel treatment plan.
