Mexico Emissions Inventory Program

Advanced Training Workbook

The Mexico Emissions Inventory Program Advanced Training Workbook was prepared for the Western Governors' Association and the Binational Advisory Committee by Radian International LLC. The workbook provides example problems that illustrate various emission estimating techniques used during an emissions inventory development effort. In addition, several potential difficulties are also examined. The examples are grouped under the following major categories:

Stationary Internal Combustion Engines,

External Combustion Devices,

Residential Fuel Combustion,

Gasoline Distribution,

Solvent Evaporation,

Point Source Stack Emissions, and Particulate Matter Estimation.

Also includes Appendices containing miscellaneous data, conversion factors, and an index of example computations contained in the emission inventory manuals.

The workbook is available at this Web site in the Acrobat

(pdf) format, filename: advtrain.pdf
