EXPLANATORY NOTE

Fatal and personal injury accident data by highway system for the calendar year 1970, compiled from reports submitted by the 50 States and the District of Columbia on Table TA-1, are summarized in the tables which follow. Data for all free and toll roads are included.

Table FRS-1 (page 1) presents a year-to-year comparison of fatality rates by highway system.

The following 12 tables show fatal-accident, fatality, injury-accident and injury rates per 100 million vehicle miles of travel by highway system and State.

Table VPD-1 (page 14) relates the fatality and injury data to vehicle registrations, population and numbers of licensed drivers.

The remaining tables consist principally of the detailed information on which the preceding tables are based. At the bottom of these tables, revised data for the preceding year are also shown.

In the use and interpretation of these tabulations, the following considerations applicable to the data should be borne in mind:

1. Certain of the States were unable to supply data on accidents, fatalities and injuries for each of the individual highway systems. In such cases it was necessary to estimate the distribution, among the individual systems, of data submitted in the form of subtotals. The asterisks which appear following the names of the States on Tables FT-1 through FT-11 and IT-1 through IT-11 indicate the cases in which this procedure was necessary.

2. The rates shown in these tables are uniformly carried out to two decimal places. This may suggest a degree of accuracy higher than that which actually obtains in cases of highway systems carrying relatively light volumes of traffic. This qualification does not apply to most of the systems, however, because of the magnitude of the reported or estimated vehicle miles and accidents on which the rates are based.

3. There is a relatively small difference between the nationwide total number of fatalities shown in these tables and that reported by the National Safety Council. This difference is explained almost entirely by the inclusion, in the Council's figure, of an estimated number of *non-traffic* fatalities—that is, fatalities which resulted from motor vehicle accidents that did not occur on a public traffic way.

4. The terms as used in these tables are defined as follows:

Vehicle miles constitute the total highway miles traveled by all types of motor vehicles, as determined by the State highway departments on the basis of actual traffic counts and estimates employing technical procedures of established validity.

Fatality is a death which results from a motor vehicle traffic accident within 12 months of the date of the accident.

Fatal accident is a motor vehicle traffic accident which results in one or more fatalities.

Non-fatal injury is a personal injury which occurs as a result of a motor vehicle traffic accident (either fatal or non-fatal) and which does not result in death within 12 months of the date of the accident.

Non-fatal injury accident is a motor vehicle traffic accident which results in non-fatal injuries to one or more persons, but results in no fatal injuries.

Urban highways are those which are located entirely within the boundaries of urban areas. An urban area is one which includes and/or is adjacent to a municipality or other urban place with 5,000 or more population, including any contiguous fringe areas with definite urban characteristics. The boundaries of urban areas are fixed, for purposes of the Federal-aid highway program, by the State highway departments, subject to the approval of the Federal Highway Administration.

Rural highways are those which are located entirely outside the boundaries of urban areas as defined above.

All rates are expressed as incidents per 100 million vehicle miles.

5. For the convenience of readers who may not be familiar with the characteristics of the several Federal-aid highway systems referred to in this report, the following brief descriptions are included:

The Federal-aid Primary and Secondary highway systems are those for which Federal-aid highway matching funds may be spent by the States. The Primary system is essentially a system of connected main highways which provide intercity and interstate service. The Secondary system consists of roads and streets providing principally local service.

The Interstate System—a part of the Federal-aid Primary highway system—will, when completed, be a system of freeways connecting and serving the principal cities of the United States. Those segments of the Interstate System which have been completed to Interstate design standards are identified in this publication as "Interstate (final)," while those segments in use but not up to Interstate standards are designated "Traveled Way, Interstate."

To obtain copies of previous issues of *Fatal and Injury Accident Rates on Federal-Aid and Other Highway Systems*, contact the Office of Traffic Operations, Federal Highway Administration, Washington, D.C. 20591. The first report in this series was for the year 1967.

Fatality Rate Trends by Highway System, U.S., 1967-1970

RATES ARE PER 100 MILLION VEHICLE MILES

^{1/} Includes all highway systems except Interstate (final).

^{2/} Includes highways not yet upgraded to full Interstate design standards but adequate for present traffic; also older sections of existing highways presently serving Interstate corridor traffic.

* Revised slightly from that shown in the 1969 report, as indicated at the bottom of tables on pages 15 through 25.

Source: State highway department reports on Federal Highway Administration Table TA-1.

Computed from data shown
in Tables FF-1 through FF-11.*

* These tables should be consulted in reference to seemingly extreme rates in the above table, to determine the possible effects of small numbers.

^a/ Includes all highway systems except Interstate (final).

^b/ Includes traveled-way Interstate. Includes highways not yet upgraded to full Interstate design standards but adequate for present traffic; also older sections of existing highways presently serving Interstate corridor traffic.

^c/ Includes highway systems in column numbers 2-4, 6, and 10.

^d/ Includes highway systems in column numbers 7 and 11.

Non-Fatal Injury Rates by Highway System and State, 1970

Completed from data shown in Tables II-1 through II-11*

TABLE IR-1
SEPTEMBER 1971

(Rates are per 100 million Vehicle Miles)

卷之三

W These tables should be consulted in reference to seemingly extreme cases in the above table, to determine the possible effects of small numbers of vehicle miles and/or non-fatal injuries on such rates.

11/ Includes all highway systems except Interstate (final).

2/ Traveled-way Interstate. Includes highways not yet upgraded to full Interstate design standards but adequate for present traffic; also older sections of existing highways presently serving Interstate corridor traffic.

3/ Includes highway systems in column numbers 2-4, 6, and 10.

4/ Includes highway systems in column numbers 7 and 11.

Rural Non-Fatal Injury Rates by Highway System and State, 1970

Computed from data shown
in Tables IT-1 through IT-11*

TABLE IR-2
SEPTEMBER 1971

STATE	NON-INTER-STATE %	(Rates are per 100 million Vehicle Miles)													STATE SYSTEMS %	NON-STATE SYSTEMS %	STATE
		FEDERAL-AID PRIMARY				FEDERAL-AID SECONDARY			TOTAL	NON-FEDERAL-AID			TOTAL	STATE SYSTEMS %	NON-STATE SYSTEMS %

* These tables should be consulted in reference to seemingly extreme rates in the above table, to determine the possible effects of small numbers of vehicle miles and/or non-fatal injuries on such rates.

1/ Includes all highway systems except Interstate (final).

2/ Traveled-way Interstate. Includes highways not yet upgraded to full Interstate design standards but adequate for present traffic; also older sections of existing highways presently serving Interstate corridor traffic.

3/ Includes highway systems in column numbers 2-4, 6, and 10.

4/ Includes highway systems in column numbers 7 and 11.

Injury Rates

Urban Non-Fatal Injury Rates by Highway System and State, 1970

Computed from data shown
in Tables III-1 through III-11.*

(Rates are per 100 million vehicle miles.)

Injury Accident Rates

* These tables should be consulted in reference to seemingly extreme rates in the above table, to determine the possible effects of small numbers of vehicle miles and/or non-fatal accidents on such rates.

2/ Includes highway systems in column numbers 2-4, 6, and 10.

4/ Includes highway systems in column numbers 7 and 11.

Computed from data shown,
in Tables IV-1 through IV-11*

Rural Non-Fatal Injury Accident Rates by Highway System and State, 1970

(Rates are per 100 million Vehicle Miles)

* These tables should be consulted in reference to seemingly extreme rates in the above tables, to determine the possible effects of small numbers of vehicle miles and/or non-fatal accidents on such rates.

/ Includes all highway systems except Interstate (final).

2/ Traveled-way Interstate. Includes highways not yet upgraded to full Interstate design standards but adequate for present traffic; also older sections of existing highways presently serving Interstate corridor traffic.

3/ Includes highway systems in column numbers 2-4, 6, and 10.

4/ Includes highway systems in column numbers 7 and 11.

Computed from data shown
in Tables III-1 through III-11*

Urban Non-Fatal Injury Accident Rates by Highway System and State, 1970

(Rates are per 100 million Vehicle Miles)

[#] Includes all highway systems except those shown on Tables FT-7 (Local Roads and Streets) and FT-11 (Local Roads and Streets).

Sources: State Highway Department Reports on Federal Highway Administration Tables TAI

^{1/} Totals slightly exceed the sum of the data for the component highway systems since a few frontage roads, in the States indicated, have not been assigned to a specific highway system.

Fatalities, Fatal Accidents, and Travel, 1970 Total—All Highways
