SUBJECT	Credit note for offshore protraction survey data on 1:100,000- and 1:250,000-scale quadrangle maps.
BACKGROUND	Supplemental Topographic Instruction 80/2/C dated March 17, 1980, provided guidelines for the use of 1:250,000-scale Bureau of Land Management (BLM) Outer Continental Shelf Official Protraction Diagrams as source for offshore protractions to be shown on USGS 1:100,000- and 1:250,000-scale quadrangle maps. Wording for a credit legend note citing BLM as the responsible agency was provided.
	In October 1982, the responsibility for preparing leasing maps and official protraction diagrams of areas of the Outer Continental Shelf was transferred from BLM to Minerals Management Service (MMS). (Reference: <u>Federal Register</u> , October 22, 1982, 47 FR 47006)
INSTRUCTIONS	Substitute "Minerals Management Service" for "Bureau of Land Manage- ment" and "MMS" for "BLM" in credit notes relating to offshore protraction survey data on National Mapping Division map products. For example, the credit note on 1:250,000-scale maps which show offshore protraction survey data is to be patterned after the following:
	Offshore protraction survey data, shown in red, furnished by the Minerals Management Service. Heavy lines indicate limits of Outer Continental Shelf Official Protraction Diagrams dated October 31, 1974, and December 2, 1976. The protractions on this map are not for Federal leasing purposes; for such purposes, refer to OCS Official Protraction Diagram available from the Minerals Management Service.
APPLIES TO	New and revised maps, and reprints of 1:100,000- AND 1:250,000-scale coastal topographic maps and topographic-bathymetric maps.
ISSUED TO	EMC, MCMC, RMMC, WMC
