

Explanation

DISCUSSION

The acceleration values contoured are the random horizontal component. For design purposes, the reference site condition for the map is to be taken as NEHRP site class B.

Note: contours are irregularly spaced

- [White square] Areas with a constant spectral response acceleration of 150% g
- [Plus sign] Point value of spectral response acceleration expressed as a percent of gravity
- [Hachure line] Contours of spectral response acceleration expressed as a percent of gravity. Hachures point in direction of decreasing values.
- [Solid line] International boundary
- [Dashed line] State boundary
- [Dotted line] County boundary
- [Thin line] Selected major highways

MAP 15
Maximum Considered Earthquake Ground Motion
for the Charleston, South Carolina Area
of
0.2 sec Spectral Response Acceleration (5% of Critical Damping)
Site Class B

Digital data prepared with ARC /INFO 7.1.1
running under Solaris 2.5 on a UNIX workstation

Albers Equal-Area Conic Projection
Standard Parallels 29.5°N and 45.5°N
Central Meridian 80°W
