

Plate 28.—Classification: SYSTEM Riverine, SUBSYSTEM Lower Perennial, CLASS Unconsolidated Bottom, SUBCLASS Cobble-Gravel, WATER REGIME Permanently Flooded, WATER CHEMISTRY Fresh. The channel bottom is composed primarily of gravel and sand. The stream meanders through a grassy annual floodplain which is flanked by a more elevated floodplain supporting cottonwoods (*Populus deltoides*). (Crook County, Wyoming; May 1985; Photo by F. C. Golet)
