

2002 EDAMAME MARKETING FACT SHEET

Prepared by Matt Ernst
March 2002

FACTS

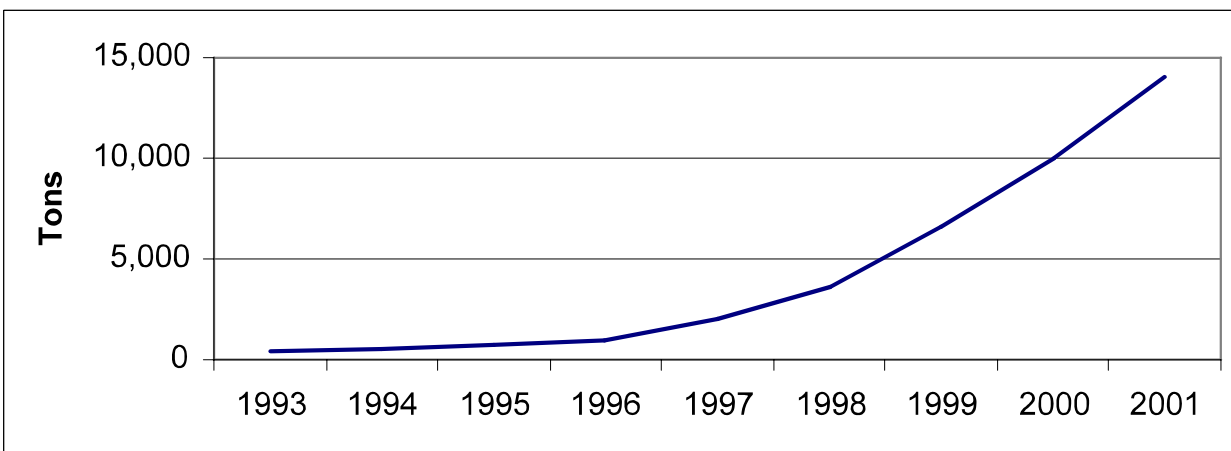

- There are several producers in Kentucky successfully marketing fresh edamame
- Edamame is also referred to as “green vegetable soybean” and a host of other names
- Safeway introduced “Safeway Select Edamame” in Dec. 2000, a store brand product indicating that edamame is quickly moving from specialty to mainstream status in the United States; beans for this product are imported from China.
- Edamame can be marketed either frozen or fresh
- There are currently only two processors of frozen edamame in the United States: Sunrich Foods in Minnesota and Seapoint Farms in California
- Most of the world’s frozen edamame is handled by Asia Foods Group of Taiwan

PRODUCTION

- U.S. edamame production is concentrated in the upper Midwest (Sunrich Foods) and West Coast (Cascadian Farms)
- Less than 1,000 tons of frozen edamame are produced in the United States
- There are probably less than 100 acres utilized for fresh market sale of edamame in the U.S.
- Food brokers identify fresh edamame as the highest in demand and hardest to find, due to only a seasonal and local market

U.S. FROZEN IN-POD EDAMAME ARRIVALS*

*About 600 tons of shelled edamame are also imported into the U.S. annually
