## Reserves in Nonproducing Status

Not all proved reserves of crude oil reported in 2006 were producing. Operators reported 5,174 million barrels of proved reserves in nonproducing status in 2006, 9 percent less than in 2005 (5,691 million barrels). Nonproducing crude oil reserves (not including lease condensate) are listed in **Table 7**.

Nonproducing reserves are those awaiting well workovers, the drilling of extensions or additional development wells, installation of production or pipeline facilities, and depletion of other zones or reservoirs before recompletion in reservoirs not currently open to production.
