## Quality Statement

The Energy Information Administration is committed to quality products and quality service. To ensure that this report meets the highest standards of quality, please forward your comments or suggestions about this publication to Linda Bromley at (202) 426-1164 or E-Mail: lbromley@eia.doe.gov.

# Preface

The *Electric Sales and Revenue* is prepared by the Coal and Electric Data and Renewables Division; Office of Coal, Nuclear, Electric and Alternate Fuels; Energy Information Administration (EIA); U.S. Department of Energy. Information is provided on electricity sales, associated revenue, average revenue per kilowatthour sold, and number of consumers throughout the United States. The data provided in the *Electric Sales and Revenue* are presented at the national, Census division, State, and electric utility levels. The information is based on annual data reported by electric utilities for the calendar year ending December 31, 1996.

## Target Audience

In the private sector, users of the *Electric Sales and Revenue* include researchers, analysts, and members of the electric power industry community. Other users include financial and investment institutions, economic development organizations, special interest groups, lobbyists, electric power associations, and the news media.

In the public sector, users include analysts, researchers, statisticians, and other professionals engaged in regulatory, policy, and program activities for Federal, State, and local governments. Congress, other legislative bodies, public service commissions, and other special government groups also use information on general trends related to electricity at State

and national levels. Data in this report are used in analytical studies to evaluate new legislation and regulatory alternatives and to forecast demand for electric power.

## Source of Data

Data published in the *Electric Sales and Revenue* are compiled from Form EIA-861, "Annual Electric Utility Report." Form EIA-861 is an annual census of electric utilities in the United States, its territories, and Puerto Rico. The form is used to collect information on the production and sale of electricity from approximately 3,250 electric utilities. A detailed description of the form is included in Appendix C, Technical Notes.

National level data presented in Tables 1 through 13 and discussed in the text include the fifty States and the District of Columbia, but do not include American Samoa, Guam, Puerto Rico, and the Virgin Islands. Data for the four power authorities are included in the utility-level data displayed in Tables 14 through 17. Also, power marketing activities of marketers engaged in several State retail wheeling pilot programs begun during the later half of 1996 are not included in Tables 1 through 17, but are discussed in Appendix B1.

# Overview

This chapter provides background information on the electric power industry in the United States and explains consumer sectors and sales, revenue, and average revenue per kilowatthour for those sectors. It also provides some information on current issues in the electric power industry that may affect retail sales and revenue. Additionally, a summary of the statistics for 1996 on retail sales, revenue, and average revenue per kilowatthour is presented.

## **Background**

Electric power is an integral part of life in the United States. It is indispensable to factories, commercial establishments, homes, and even most recreational facilities. Lack of electric power causes not only inconvenience, but also economic loss due to reduced industrial production. Electric utilities are responsible for ensuring an adequate and reliable source of electricity to all consumers in their service territories at a reasonable cost.

Electric utilities are regulated by local, State, and Federal authorities. Generally, interstate activities (those that cross State lines) are subject to Federal regulation, while intrastate activities are subject to State regulation. Wholesale rates (sales and purchases between electric utilities), licensing of hydroelectric facilities, questions of nuclear safety and high-level nuclear waste disposal, and environmental regulation are Federal concerns. Approval for most plant and transmission line construction and retail rate levels are State regulatory functions.

State public service commissions have jurisdiction primarily over the large, vertically integrated, investor-owned electric utilities that own more than 75 percent of the Nation's generating and transmission capacity and serve about 75 percent of ultimate consumers. There are approximately 250 investor-owned electric utilities, 2,000 publicly owned electric utilities, 950 consumer-owned rural electric cooperatives, and 10 Federal electric utilities. Approximately 20 States regulate cooperatives, and 7 States regulate municipal electric utilities; many State legislatures, however, defer this control to local municipal officials or cooperative members.

**Consumer Sectors.** Utility service territories are geographically distinct from one another. Each territory is usually composed of many different types of consumers. Electricity consumers are divided into classes of service or sectors (residential, commercial, industrial, and other) based on the type of service they receive.

Sectorial classification of consumers is determined by each utility and is based on various criteria such as demand levels, rate schedules, Standard Industrial Classification (SIC) codes, distribution voltage, accounting methods, end-use applications, and other social and economic characteristics. Electric utilities use consumer classifications for planning (e.g., load growth and peak demand) and for determining their sales and revenue requirements (costs of service) in order to derive their rates. Utilities typically employ a number of rate schedules for a single sector. The alternative rate schedules reflect consumers' varying consumption levels and patterns and the associated impact on the utility's costs of providing electrical service.

Reclassification of consumers, usually between the commercial and industrial sectors, may occur from year to year due to changes in demand level, economic factors, or other factors. For this reason, the commercial and industrial sectors are discussed collectively as the nonresidential sector in some sections of this publication.

The residential sector includes private households and apartment buildings where energy is consumed primarily for space heating, water heating, air conditioning, lighting, refrigeration, cooking, and clothes drying. The commercial sector includes nonmanufacturing business establishments such as hotels, motels, restaurants, wholesale businesses, retail stores, and health, social, and educational institutions. Sometimes the commercial sector includes small manufacturing facilities as well. The industrial sector includes manufacturing, construction, mining, agriculture, fishing, and forestry establishments (SIC codes 1 through 39).

An electric utility may classify commercial and industrial consumers based on either SIC codes or demand and/or usage falling within specified limits. The limits are set by the electric utility based on different rate schedules. The "other" sector includes public street and highway lighting, railroads and railways, municipalities, divisions or agencies of State and Federal Governments under special contracts or agreements, and other utility departments, as defined by the pertinent regulatory agency and/or electric utility.

**Revenue.** The revenue associated with sales to ultimate consumers is the operating revenue reported by the utility. Operating revenue includes energy charges, demand charges, consumer service charges, environmental surcharges, fuel adjustments, and other miscellaneous charges.

Among other costs of service, utility operating revenues include State and local taxes, Federal

income taxes, and other taxes paid by the utility. State and local authorities tax the value of plants (property taxes), the amount of revenues (gross receipts taxes), purchases of materials and services (sales and use taxes), and a potentially long list of other items that vary extensively by taxing authority. Federal taxes are for the most part "payroll" taxes. Taxes deducted from employees' pay, such as Federal income taxes and employees' share of Social Security taxes are not a part of the utility's "tax costs," but are paid to the taxing authorities in the name of the employees. These taxes are included in the electric utility's costs of service (i.e., revenue requirements) and are included in the amounts recovered from consumers in rates and reported in operating revenues.

Electric utilities, like other business enterprises, are required by various taxing authorities to collect and remit taxes assessed on their consumers. In this regard, the utility serves as an agent for the taxing authority. Taxes assessed on consumers, such as sales taxes, are called "pass through" taxes. These taxes do not represent a cost to the utility and are not recorded in the operating revenues of the utility. However, taxing authorities differ on whether a specific tax is assessed to the utility or to the consumer, a difference that in turn determines whether or not the tax is included in the electric utility's operating revenues.

*Average Revenue per Kilowatthour.* Average revenue per kilowatthour is defined as the cost per unit of electricity sold and is calculated by dividing retail electric revenue by the corresponding sales of electricity. The average revenue per kilowatthour is calculated for all consumers and for each sector (residential, commercial, industrial, and other). The average revenue per kilowatthour reported in this publication represents a weighted average of consumer revenue and sales within each sector and across sectors for all consumers.

Average revenue per kilowatthour is affected by changes in the rate schedules used by the electric utilities and by changes in the volume of electricity sales. Because fixed charges remain constant regardless of the volume of sales, average revenue per kilowatthour decreases as the volume of sales increases. A change in average revenue per kilowatthour may occur when the volume of electricity sales changes (because of an increase/decrease in the use of electricity by individual consumers or an increase/decrease in the number of ultimate consumers) across all sectors or within a specific sector. Generally, the rate schedules used by electric utilities are designed so that as the volume of sales increases, the revenue increases at a slower rate, lowering the average revenue per kilowatthour. The net effect of these factors on the average revenue per kilowatthour presented in this publication has not been determined. Average revenue per kilowatthour is affected by class of utility ownership and by class of service (sector). Consequently, data are presented in this publication by class of ownership and sector.

*Classes of Ownership.* The electric utility industry in the United States includes approximately 3,200 investor-owned, publicly owned, cooperative, and Federal electric utilities. Historically, investor-owned electric utilities have been most successful in serving large, consolidated markets where economies of scale afford the lowest prices. However, publicly owned, cooperative, and Federal electric utilities all have a role in producing, transmitting, and distributing electricity.

Investor-owned electric utilities are privately owned entities. They represent 8 percent of the total number of electric utilities and approximately 75 percent of electric utility generating capability, generation, sales, and revenue in the United States. Like all private businesses, investor-owned electric utilities have the fundamental objective of producing a return for their investors. These utilities either distribute profits to stockholders as dividends or reinvest the profits. Investor-owned electric utilities are granted service monopolies in certain geographic areas and are obliged to serve all consumers. As franchised monopolies, these utilities are regulated and required to charge reasonable prices, to charge comparable prices to similar classifications of consumers, and to give consumers access to services under similar conditions. Most investor-owned electric utilities are operating companies that provide basic services for the generation, transmission, and distribution of electricity. The majority of investor-owned utilities perform all three functions. They operate in all States except Nebraska, where electric utilities consist primarily of municipal systems and public power districts.

Publicly owned electric utilities are nonprofit local government agencies established to provide service to their communities and nearby consumers at cost, returning excess funds to consumers in the form of community contributions, increased economies and efficiencies in operations, and reduced rates. Publicly owned electric utilities include municipals, public power districts, State authorities, irrigation districts, and other State organizations. Most municipal electric utilities simply distribute power, although some large ones produce and transmit electricity as well. There are approximately 2,000 publicly owned electric utilities in the United States. They represent about 62 percent of the number of electric utilities, supply approximately 10 percent of generation and generating capability, and account for about 15 percent of retail sales and 13 percent of revenue. They obtain their financing from municipal treasuries and from revenue bonds secured by proceeds from the sale of electricity. Public power districts and projects are concentrated in Nebraska, Washington, Oregon, Arizona, and California. Voters in a public utility district elect commissioners or directors to govern the district independent of any municipal government. State authorities, like the Power Authority of the State of New York or the South Carolina Public Service Authority, are agencies of their respective State governments. Irrigation districts may have other forms of organization. In the Salt River Project in Arizona, for example, votes for the board of directors are apportioned according to the size of landholdings.

Cooperative electric utilities are owned by their members and established to provide electricity to those members. These electric utilities operate in rural areas with low concentrations of consumers because these areas historically have been viewed as uneconomical operations for investor-owned utilities. There are approximately 950 cooperatives operating in 47 States; none operate in Connecticut, Hawaii, Rhode Island, or the District of Columbia. Cooperative electric utilities represent about 29 percent of U.S. electric utilities, approximately 8 percent of sales and revenue, and around 4 percent of generation and generating capability. Cooperatives are incorporated under State laws and are usually directed by an elected board of directors, which in turn selects a manager. The Rural Utilities Service (formerly the Rural Electrification Administration), the National Rural Utilities Cooperative Finance Corporation, the Federal Financing Bank, and the Bank for Cooperatives are important sources of debt financing for cooperatives.

The 10 Federal electric utilities in the United States are part of several agencies in the U.S. Government: the Army Corps of Engineers in the Department of Defense, the Bureau of Indian Affairs and the Bureau of Reclamation in the Department of the Interior, the International Boundary and Water Commission in the Department of State, the Power Marketing Administrations in the Department of Energy (Alaska, Bonneville, Southeastern, Southwestern, and Western Area), and the Tennessee Valley Authority. Three Federal agencies operate Federal generating facilities: the Tennessee Valley Authority, the largest Federal

producer; the U.S. Army Corps of Engineers; and the U.S. Bureau of Reclamation. The Tennessee Valley Authority markets its own power while generation by the U.S. Army Corps of Engineers (except for the North Central Division, i.e., Saint Mary's Falls at Sault Ste. Marie, Michigan) and the U.S. Bureau of Reclamation is marketed by the Federal power marketing administrations: Bonneville, Southeastern, Southwestern, and Western Area. The four power marketing administrations also purchase energy for resale from other electric utilities in the United States and Canada. Alaska, the fifth power marketing administration, owned and operated two hydropower facilities (Eklutna and Snettisham). On November 28, 1995, President Clinton signed a bill authorizing the sale of these projects. Final transfer of title to the State of Alaska (Snettisham) and three Alaskan utilities (Eklutna) is anticipated in late 1998 after which the Alaska Power Administration will cease to exist.

Federal electric utilities represent less than 1 percent of all electric utilities, provide approximately 10 percent of all generating capability and generation, and account for about 1 percent of total sales to ultimate consumers and less than 1 percent of the associated revenue. Federal electric utility generation is primarily sold for resale to municipal and cooperative electric utilities and to other nonprofit preference consumers, as required by law. Federal power is sold not for profit, but to recover the costs of operations. Federal electric utilities operate approximately 180 power plants. Most of the power plants are Federal hydroelectric projects initially designed for flood control and irrigation purposes.

## **Current Issues in the Electric Power Industry**

The electric power industry is evolving from a highly regulated, monopolistic industry with traditionally structured electric utilities to a less regulated, competitive industry. The Public Utilities Regulatory Policies Act of 1978 opened up competition in the generation market with the creation of qualifying facilities. The Energy Policy Act of 1992 (EPACT) removed some constraints on ownership of electric generation facilities and encouraged increased competition in the wholesale electric power business.

The EPACT amended the Federal Power Act (FPA) such that any electric utility can apply to the Federal Energy Regulatory Commission (FERC) for an order requiring another electric utility to provide transmission services (wheeling). Prior to EPACT, the FERC could not mandate that an electric utility provide wheeling services for wholesale electric trade. This change in the law permits owners of electric generating equipment to sell wholesale power (sales for resale) to noncontiguous utilities.

In April 1996, the FERC issued two final rules, 888 and 889, implementing EPACT's provisions for open access to transmission lines. Rule 888 addresses equal access to the transmission grid for all wholesale buyers and sellers, transmission pricing, and the recovery of stranded costs. Stranded costs are investments, mostly in generation, made by utilities under the regulated environment that are presently recovered in cost-based rate structures and may not be recoverable in a competitive environment with market-based rates. Rule 889 requires jurisdictional utilities that own or operate transmission facilities to establish electronic systems to post information about their available transmission capacities. In response to these rulemakings, utilities are proposing to form Independent System Operators (ISO) to operate the transmission grid, regional transmission groups, and open access same-time information systems (OASIS) to inform competitors of available capacity on their lines.

The provision for open transmission access in EPACT has also facilitated the creation of new participants in the electric power industry, power marketers and power brokers. Power marketers are entities engaged in buying and selling wholesale electricity and fall under the jurisdiction of the FERC, since they take ownership of electricity and are engaged in interstate trade. Power brokers, who do not take ownership of electricity, are not regulated by the FERC. A growing number of power marketers have filed with the FERC and had rates approved. Power marketers generally do not own generation or transmission facilities or sell power to retail customers. However, continuing deregulation of the industry is allowing power marketers the possibility of entering retail electricity markets.

Many State legislatures and the Congress are considering legislation that will allow competition in retail sales of electric power. In 1996, Rhode Island and California passed bills that will allow end-use customers in their States to choose among competitive generation suppliers. The plans will phase in retail choice for some consumers as early as 1997, and for all consumers by 2001. Transmission and distribution will remain regulated functions with rules to assure open access to lines for all competitors. Pilot programs for retail wheeling are underway in New Hampshire and at major utilities in several States. This interest in retail competition points to an increasingly competitive electric power industry. Presently, electric rates are based on embedded historical costs. Future electric rates are likely to be dynamic, reflecting the current cost of providing service. In a competitive environment, unbundling of electric power services and pricing that reflects time-of-day and seasonal variations will become more common.

Continuing deregulation at both Federal and State levels is transforming the historically monopolistic electric power industry into a competitive industry that will eventually increase competition in the generation and service components of the electric power industry, and change the nature of the way electricity is priced, traded, and marketed in the United States.

### **Year in Review, 1996**

In 1996, total sales of electricity to ultimate consumers increased 2.8 percent, from 3,013 billion kilowatthours (kWh) in 1995 to 3,098 billion kWh in 1996. Total revenue from sales of electricity to ultimate consumers increased 2.3 percent, from \$208 billion in 1995 to \$212 billion in 1996. The average revenue per kilowatthour of electricity sold to ultimate consumers in the United States in 1996 was 6.86 cents, a slight decrease from the 1995 level of 6.89 cents.

**Sales by Sector.** Sales to the residential sector in 1996 increased 3.8 percent over the 1995 level, to 1,082 billion kWh, which represented 34.9 percent of sales to ultimate consumers. The nonresidential sectors<sup>1</sup> (i.e., the commercial and industrial sectors) increased 2.3 percent over the 1995 level, to 1,918 billion kWh, which represented 61.9 percent of sales to ultimate consumers. Sales to the "other" sector were 98 billion kWh in 1996.

**Revenue by Sector.** For the residential sector, revenue increased 3.3 percent, to \$91 billion in 1996 and represented 42.6 percent of the total revenue from sales to ultimate consumers. Revenue for the nonresidential sectors (i.e., the commercial and industrial sectors) increased by 1.5 percent, to \$115 billion in 1996 and represented 54.2 percent of total revenue from sales to ultimate consumers. Revenue for the "other" sector was \$7 billion in 1996.

<sup>1</sup> Changes in the commercial and industrial sectors are discussed collectively as the nonresidential sectors because from one year to the next, utilities may reclassify consumers, moving them from the commercial to the industrial sector or the reverse. As a result, year-to-year changes in these two sectors must be viewed with caution.

*Average Revenue per Kilowatthour by Sector.*

For the residential sector, average revenue per kilowatthour decreased 0.5 percent, from 8.40 cents in 1995 to 8.36 cents in 1996. For the nonresidential sectors (i.e., the commercial and industrial sectors), average revenue per kilowatthour decreased 0.7 percent, from 6.05 cents in 1995 to 6.01 cents in 1996. Average revenue for the "other" sector was 6.91 cents in 1996.

*Sales by Ownership.* Sales by investor-owned electric utilities in 1996 increased 2.2 percent to 2,343 billion kilowatthours and represented 75.6 percent of sales to ultimate consumers. Publicly owned utility sales increased 4.5 percent to 451 billion kWh and represented 14.6 percent of total sales. Cooperative utility sales increased 7.6 percent to 258 billion kWh and represented 8.3 percent of sales. Federal utility sales decreased 7.8 percent to 46 billion kWh and represented 1.5 percent of sales.

*Revenue by Ownership.* All ownership classes, except Federal utilities, reported increased revenue from sales of electricity to ultimate consumers in 1996 compared with 1995. Investor-owned electric

utilities increased revenue by 1.8 percent, to \$167 billion; publicly owned electric utilities, by 4.3 percent, to \$27 billion; cooperatives, by 4.8 percent, to \$17 billion; and Federal electric utilities decreased revenue, by 13.5 percent, to \$1.2 billion.

*Average Revenue by Ownership.* In 1996, investor-owned electric utilities had an average revenue per kilowatthour of 7.12 cents, a slight decrease from 7.15 cents in 1995; publicly owned electric utilities decreased from 6.02 cents in 1995 to 6.01 cents in 1996; cooperative electric utilities decreased from 6.92 cents in 1995 to 6.74 cents in 1996. Federal electric utilities average revenue per kilowatthour was 2.52 cents, a slight decrease from 2.69 cents in 1995.

Tables 1 and 2 contain summary statistics on sales of electricity to ultimate consumers, associated revenue, and average revenue per kilowatthour at the national level by sector and class of ownership. Figures 1 through 12 illustrate the distribution of utilities; consumers; sales to ultimate consumers; associated revenue; and average revenue per kilowatthour by class of ownership and sector.

**Table 1. U.S. Sales to Ultimate Consumers, Associated Revenue, and Average Revenue per Kilowatthour by Sector, 1996**

# Sales and Revenue

This chapter presents background information on revenue requirements, allocation of revenue across sectors, and rate schedules. Summary statistics are provided on electricity sales to ultimate consumers, associated revenue, and number of consumers by sector and by class of ownership at the national, Census division, and State levels.

## **Cost of Electricity**

The process of determining the costs of electricity usually occurs in three stages: (1) revenue requirements are determined, (2) revenue requirements are allocated to different sectors, and (3) rate schedules for each sector are established.

**Revenue Requirements.** Revenue requirements are set to reimburse the electric utility for providing electric service. They reflect the anticipated costs of providing services for some period of time in the future, usually a year. Revenue requirements include investment depreciation; expenses for production, transmission, and distribution systems; sales costs; consumer costs; Federal and other taxes; and administration and general expenses. Revenue requirements also include an allowance for profit in the case of investor-owned electric utilities.

**Allocation of Revenue.** Allocation of revenue to each sector is guided by the costs of service to each sector and the type of consumers served in the sectors. For example, the costs of service to the residential sector are higher than the costs to the commercial or industrial sectors because of residential consumers' relatively low consumption levels, the large number of residential consumers, and the extensive distribution lines needed to provide service. The economic activity or type of business of ultimate consumers is not necessarily the criteria used by electric utilities to classify consumers, determine revenue requirements, and set rates. Electric utilities, in many instances, determine revenue requirements and set rates based on consumers' level of demand and/or consumption of electricity.

The residential sector represents 87.8 percent of ultimate consumers and accounts for 34.9 percent of sales to ultimate consumers and 42.6 percent of associated revenue. The industrial sector represents 0.5 percent of ultimate consumers, accounts for 33.3 percent of sales, and 22.3 percent of revenue. The commercial sector provides 11.0 percent of the consumers and accounts for 28.6 percent sales and 31.9 percent of

revenue. The remaining sales are made to the "other" sector, which includes public street and highway lighting, railroads and railways, municipalities, divisions or agencies of State and Federal Governments under special contracts or agreements, and other utility departments, as defined by the pertinent regulatory agency and/or electric utility.

**Rate Schedules.** Rate schedules for electric utilities are designed to reimburse utilities for operation, generation, maintenance, rental fees for equipment, and demand and energy charges. Operation, generation, maintenance, and rental fees for equipment are usually fixed charges that are assessed monthly or annually. Demand charges are often fixed, but can vary with the peak demand of the utility. Energy charges vary according to the amount of electricity delivered.

Rate schedules developed by electric utilities are unique to each utility. Rate schedules reflect various considerations that are important to the economic welfare of the electric utility and may reflect other considerations as well, for example, residential rates that may provide economical service to low-income families. Generally, commercial or industrial billings are determined by the levels of demand and consumption of electricity rather than by consumers' economic activity. For example, a light manufacturing establishment with a manufacturing process that consumes little energy may be billed at a commercial rate because its consumption is not high enough to qualify for the industrial schedule. Conversely, a large commercial building may have sufficient consumption to be billed at an industrial rate.

Authority for approval of rate schedules is determined by the class of electric utility ownership. Investor-owned electric utilities are regulated by State public service commissions and the Federal Energy Regulatory Commission. Publicly owned and cooperative electric utilities in most States are regulated by their consumer-owners through locally elected or appointed officials. A detailed discussion of utility classes of ownership is contained in the "Overview" section of this publication.

Tables 3 through 10 contain data on electricity sales to the ultimate consumer, associated revenue, and average number of consumers at the national, Census division, and State levels by sector and class of ownership. Data for the four power authorities of American Samoa, Guam, Puerto Rico, and the Virgin Islands are not included in the summary statistics.

# Average Revenue per Kilowatthour

This chapter presents background information on average revenue per kilowatthour at the national, Census division, State, and electric utility levels.

## **Average Revenue per Kilowatthour at the National, Census Division, and State Levels**

Average revenue per kilowatthour by sector and State is calculated by dividing revenue from sales to ultimate consumers in a given sector and State by the corresponding sales for that sector and State. The resulting statistic is the average revenue per kilowatthour sold by consumer sector. Many rate schedules have a minimum service charge, and most set a declining rate per unit of consumption as consumption increases. Rate schedules for the commercial and industrial sectors almost always have a demand charge in addition to an energy charge. These charges lower the average revenue per kilowatthour as consumption increases.

Average revenue per kilowatthour for the residential sector is usually higher than for other sectors, due to the relatively small amount of consumption per consumer and the relatively low load factor. Load factor is average load expressed as a percentage of peak load. Consumers with a small amount of consumption and low load factors are more costly to serve per unit of energy than consumers with large amounts of consumption and high load factors. Residential consumers typically have low load factors compared with industrial or commercial consumers.

Average revenue per kilowatthour for the residential sector increased each year from 1992 to 1995 but declined in 1996, for a net increase of .15 cents per kilowatthour. For the third year, the commercial and industrial sectors showed a slight decrease in average revenue per kilowatthour; commercial decreased .10 cents since 1993, and industrial decreased .25 cents since 1993. The decrease in average revenue per kilowatthour for the industrial sector most likely indicates that some State public service commissions approved rates for industrial consumers that more accurately reflect the costs of service for that sector.

Average revenue per kilowatthour for investor-owned electric utilities decreased slightly from 7.15 cents in 1995 to 7.12 cents in 1996; publicly owned electric utilities decreased from 6.02 cents in 1995 to 6.01

cents in 1996; and cooperative electric utilities decreased from 6.92 in 1995 to 6.74 cents in 1996. Investor-owned electric utilities continue to have the highest average revenue per kilowatthour, surpassing cooperatives again for the sixth year. Average revenue per kilowatthour for Federal electric utilities decreased from 2.69 cents in 1995 to 2.52 cents in 1996.

Federal electric utilities have the lowest average revenue per kilowatthour among ownership classes because these electric utilities have access to relatively low-cost financing and generally utilize inexpensive hydroelectric facilities. Because publicly owned electric utilities also have access to relatively low-cost financing and are nonprofit entities, they have lower average revenue per kilowatthour than investor-owned electric utilities. Although cooperative electric utilities have economic advantages similar to those of publicly owned electric utilities, cooperatives generally serve sparsely populated areas and provide service to a higher percentage of rural residential consumers than other classes of utilities. Additionally, many cooperatives do not generate electricity, but as full requirement customers of electric utilities with generation facilities, must pay requirement demand charges. As a result, cooperative electric utilities usually have higher average revenue per kilowatthour than publicly owned electric utilities.

Because of the type and availability of capacity and the cost of fuel, average revenue per kilowatthour differs across U.S. Census divisions. Petroleum is generally a more expensive energy source than coal and natural gas. Because the New England and Middle Atlantic Census Divisions rely primarily on petroleum to fuel their generation, they tend to have an average revenue per kilowatthour that exceeds the national average. The East and West South Central Divisions rely on gas-fired generation and the East North Central and South Atlantic Census Divisions rely on coal-fired generation. Because the Mountain Census Division relies on inexpensive hydroelectric generation, average revenue per kilowatthour in this region is usually below the national average for all classes of consumers. The Census divisions where Federal hydroelectric facilities provide significant amounts of electricity, such as the East South Central Census Division, also have low average revenue per kilowatthour.<sup>2</sup>

Electric utility demand-side management (DSM) programs may play a role in changing consumers' average

<sup>2</sup> Energy Information Administration, *Cost and Quality of Fuels for Electric Utility Plants 1995*, DOE/EIA-0191(95), Washington, DC, 1995.

consumption and average revenue per kilowatthour. DSM programs are designed to modify consumption patterns and encourage efficient use of electricity. DSM programs designed to reduce system peak demands and energy requirements have become important components of electric utility load and resource plans. The Energy Policy Act of 1992 (EPACT) contains a section that promotes energy conservation and efficiency by encouraging utilities to expand DSM programs. EPACT requires electric utilities and State public service commissions to consider implementing two new Federal standards that encourage DSM: (1) integrated resource planning, which includes consideration of demand-side options as well as supply-side options, and (2) cost recovery for energy efficiency programs that allows DSM program profitability to be at least as attractive as supply-side option profitability.

Public concerns and increasingly strict Federal and State environmental standards have forced electric utilities to reduce the release of air pollutants from power plants. Implementing the Clean Air Act Amendments of 1990 is resulting in installation of additional pollution control and/or monitoring equipment and potential shifts to relatively high-cost, low-sulfur fuels that will eventually affect utility revenue requirements and may increase electricity rates.

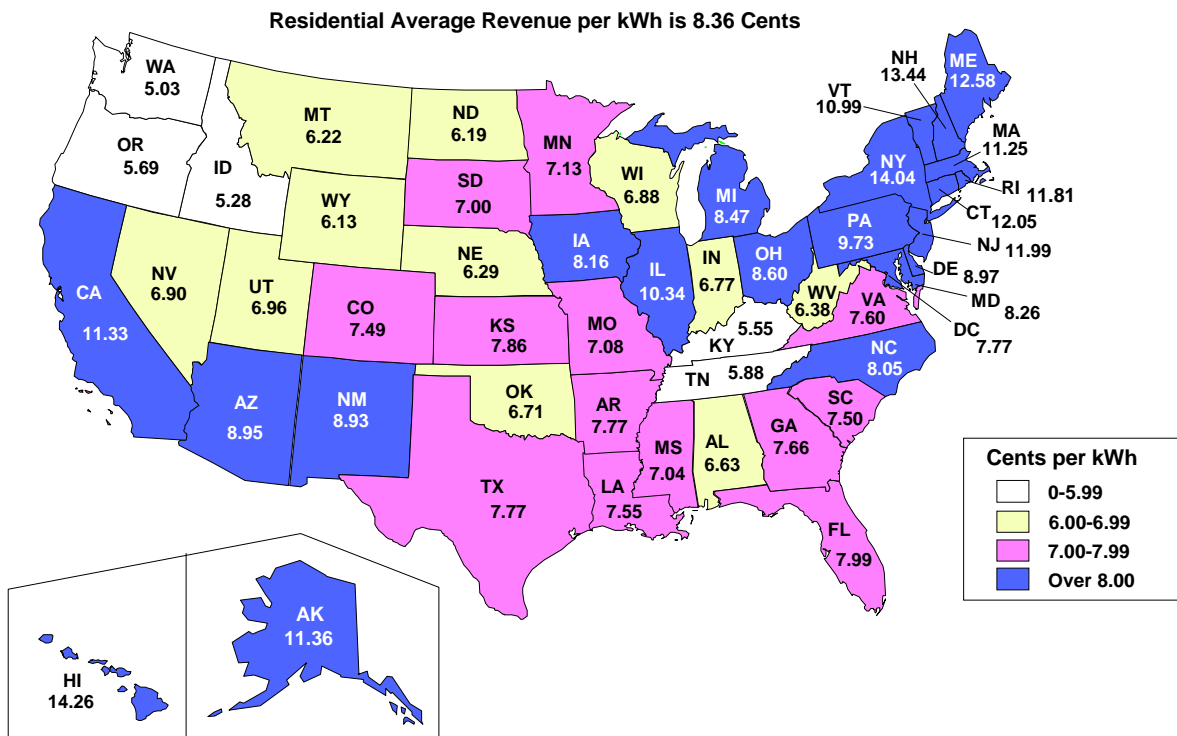

Tables 11 through 13 contain summary statistics on the average revenue per kilowatthour of electricity sold at the national, Census division, and State levels by sector and class of utility ownership. Figures 13 through 16 illustrate average revenue per kilowatthour by State for the residential, commercial, industrial, and all sectors. Data for the four power authorities of American Samoa, Guam, Puerto Rico, and the Virgin Islands are not included in the summary statistics.

## **Average Revenue per Kilowatthour at the Electric Utility Level**

Average revenue per kilowatthour of electricity sold for each utility is calculated by dividing revenue from sales to ultimate consumers of the electric utility by the corresponding electricity sales to all sectors by that utility. Average revenue per kilowatthour is a function of consumer base, ownership class, geographic location, cost of fuel, financing arrangements, and other factors.

The average revenue per kilowatthour varies by sector; accordingly, differences between utilities may represent differences in the proportion of sales to different sectors. Average revenue per kilowatthour for a given utility does not reflect differences that may exist in its revenue structure across sectors.

Average revenue per kilowatthour to ultimate consumers for Federally owned utilities tends to be lower than for the other ownership classes. Among several factors contributing to this is that Federal electric utilities are primarily wholesale power producers and serve few, if any, residential consumers. They also have access to relatively inexpensive hydropower. Publicly owned and cooperative utilities share some advantages that can result in lower average revenue per kilowatthour than investor-owned utilities: they are nonprofit, have access to low-cost financing, and have preference for purchasing Federal wholesale power. However, cooperatives generally have broad service areas and a high percentage of residential consumers because of the nature of the rural communities that they traditionally serve. Municipal utilities have more consolidated service areas and likely have a broader base of industrial and commercial consumers than cooperatives. The result is that cooperatives have a higher cost of service than municipal utilities and a corresponding higher average revenue per kilowatthour. Investor-owned utilities must produce a rate-of-return for their investors and generally have diverse consumer bases and utilize various fuels. Average revenue per kilowatthour for individual utilities usually ranges between 4 and 12 cents per kilowatthour.

In Alaska, average revenue per kilowatthour reflects the high costs of service associated with generation and distribution in that State. Utilities in Alaska typically consist of isolated systems, which lack an inte-

grated transmission system and the advantages of economy of scale. Of the 81 reporting electric utilities in Alaska, 80 utilities have average revenue per kilowatthour exceeding the U.S. average. The Power Cost Equalization (PCE) subsidy by the State of Alaska was designed to compensate consumers served by electric utilities located in rural areas where transmission access is limited and electric power is produced with expensive diesel gas turbines. The subsidy is allocated to electric utilities based on consumer sector and demand for electricity in each sector. Electric utilities that qualify for the PCE program are required to notify consumers of the cost of electric service and the cost minus the State equalization. Consumers receiving the subsidy do not actually pay the high rates. The PCE subsidy has not been subtracted from the total revenue of those electric utilities receiving compensation for high energy costs in Tables 14 through 17 in this publication.

Electric utilities operating on islands with high seasonal populations also tend to have high average revenue per kilowatthour. High demand charges are needed to recover the fixed equipment and operating costs associated with generating electricity at infrequent times. These circumstances pertain to only a few utilities, located primarily on the East Coast and in the Great Lakes area.

Tables 14, 15, 16, and 17 present the number of ultimate consumers, retail sales, associated revenue, and average revenue per kilowatthour by State and electric utility for the residential, commercial, industrial, and all sectors, respectively. When an electric utility provided service to ultimate consumers in more than one State, the utility is listed under each State it served. Table A1 in Appendix A lists the electric utilities that provided service in more than one State and the percent of sales in each State.

Electric revenue and sales data are reported by electric utilities in thousand dollars and thousand kilowatthours. Average revenue per kilowatthour for electric utilities with less than either \$100,000 of revenue or 1 million kilowatthours of sales is not provided because the significance of these data is not sufficient to make the ratio meaningful. See Appendix C for further information. Data for the four power authorities of American Samoa, Guam, Puerto Rico, and the Virgin Islands are included in Tables 14 through 17.

<b>Total (Includes the Four Power Authorities).....</b>		<b>106,575,684</b>	<b>91,066,256</b>	<b>1,088,639,945</b>	<b>8.37</b>

<sup>1</sup> The average revenue per kilowatthour of electricity sold is calculated by dividing revenue by sales.

<sup>2</sup> Most electric utilities in the State of Alaska that have average revenue per kilowatthour exceeding the U.S. average compensate their rural consumers through the State of Alaska Power Cost Equalization (PCE) program. The PCE program was designed to offset the high generation and distribution costs that must otherwise be passed on to consumers in the form of high rates for electricity. The PCE subsidy has not been subtracted from the data shown in this table for the total revenue of those utilities receiving compensation for high energy costs.

<sup>3</sup> The U.S. total excludes the four power authorities of American Samoa, Guam, Puerto Rico, and the Virgin Islands.

<sup>4</sup> Electric revenues and sales data are reported by electric utilities in thousand dollars and thousand kilowatthours. Average revenues per kilowatthour for electric utilities with either less than \$100,000 of revenue or less than 1 million kilowatthours of sales are not provided because the significance of the data is not sufficient to make the ratio meaningful.

Notes: •Data are final. •The power authorities of American Samoa, Guam, Puerto Rico, and the Virgin Islands are not included in aggregated statistics unless specified. •Electric utilities serving consumers in more than one State are listed under each State served.

Source: Energy Information Administration, Form EIA-861, "Annual Electric Utility Report."

**Table 15. Class of Ownership, Number of Ultimate Consumers, Revenue, Sales, and Average Revenue per Kilowatthour for the Commerical Sector by State and Utility, 1996**

<sup>1</sup> The average revenue per kilowatthour of electricity sold is calculated by dividing revenue by sales.

<sup>2</sup> Most electric utilities in the State of Alaska that have average revenue per kilowatthour exceeding the U.S. average compensate their rural consumers through the State of Alaska Power Cost Equalization (PCE) program. The PCE program was designed to offset the high generation and distribution costs that must otherwise be passed on to consumers in the form of high rates for electricity. The PCE subsidy has not been subtracted from the data shown in this table for the total revenue of those utilities receiving compensation for high energy costs.

<sup>3</sup> The U.S. total excludes the four power authorities of American Samoa, Guam, Puerto Rico, and the Virgin Islands.

<sup>4</sup> Electric revenue and sales data are reported by electric utilities in thousand dollars and thousand kilowatthours. Average revenues per kilowatthour for electric utilities with either less than \$100,000 of revenue or less than 1 million kilowatthours of sales are not provided because the significance of the data is not sufficient to make the ratio meaningful.

Notes: •Data are final. •The power authorities of American Samoa, Guam, Puerto Rico, and the Virgin Islands are not included in aggregated statistics unless specified. •Electric utilities serving consumers in more than one State are listed under each State served.

Source: Energy Information Administration, Form EIA-861, "Annual Electric Utility Report."

<sup>1</sup> The average revenue per kilowatthour of electricity sold is calculated by dividing revenue by sales.

<sup>2</sup> Most electric utilities in the State of Alaska that have average revenue per kilowatthour exceeding the U.S. average compensate their rural consumers through the State of Alaska Power Cost Equalization (PCE) program. The PCE program was designed to offset the high generation and distribution costs that must otherwise be passed on to consumers in the form of high rates for electricity. The PCE subsidy has not been subtracted from the data shown in this table for the total revenue of those utilities receiving compensation for high energy costs.

<sup>3</sup> The U.S. total excludes the four power authorities of American Samoa, Guam, Puerto Rico, and the Virgin Islands.

<sup>4</sup> Electric revenue and sales data are reported by electric utilities in thousand dollars and thousand kilowatthours. Average revenues per kilowatthour for electric utilities with either less than \$100,000 of revenue or less than 1 million kilowatthours of sales are not provided because the significance of the data is not sufficient to make the ratio meaningful.

Notes: •Data are final. •The power authorities of American Samoa, Guam, Puerto Rico, and the Virgin Islands are not included in aggregated statistics unless specified. •Electric utilities serving consumers in more than one State are listed under each State served.

Source: Energy Information Administration, Form EIA-861, "Annual Electric Utility Report."

<sup>1</sup> The average revenue per kilowatthour of electricity sold is calculated by dividing revenue by sales.

<sup>2</sup> Most electric utilities in the State of Alaska that have average revenue per kilowatthour exceeding the U.S. average compensate their rural consumers through the State of Alaska Power Cost Equalization (PCE) program. The PCE program was designed to offset the high generation and distribution costs that must otherwise be passed on to consumers in the form of high rates for electricity. The PCE subsidy has not been subtracted from the data shown in this table for the total revenue of those utilities receiving compensation for high energy costs.

<sup>3</sup> The U.S. total excludes the four power authorities of American Samoa, Guam, Puerto Rico, and the Virgin Islands.

<sup>4</sup> Electric revenue and sales data are reported by electric utilities in thousand dollars and thousand kilowatthours. Average revenues per kilowatthour for electric utilities with either less than \$100,000 of revenue or less than 1 million kilowatthours of sales are not provided because the significance of the data is not sufficient to make the ratio meaningful.

Notes: •Data are final. •The power authorities of American Samoa, Guam, Puerto Rico, and the Virgin Islands are not included in aggregated statistics unless specified. •All sectors include residential, commercial, industrial, and other customers. •Electric utilities serving consumers in more than one State are listed under each State served.

# Electric Utilities Serving Ultimate Consumers in More Than One State

Table A1 lists utilities that serve ultimate consumers in more than one State. It shows the States served by each utility and the percentage of sales in each State. The information comes from Form EIA-861, "Annual Electric Utility Report." The majority of electric utilities that serve ultimate consumers in more than one State are investor-owned electric utilities. These electric utilities generally have large franchise service areas and historically have served retail consumers in more than one State. Publicly owned electric utilities usually are chartered by municipal or State govern-

ments and provide service within the cities or counties where they are located. The information in Table A1 can be used as a reference to Tables 14 through 17. For example, Table A1 indicates that the Appalachian Power Company serves consumers in Virginia and West Virginia. Tables 14 through 17 list the Appalachian Power Company under both Virginia and West Virginia, showing the company's number of consumers, sales, revenue, and average revenue per kilowatthour in each State.

# **Appendix B**

## **Retail Power Marketing**

## Appendix B

# Retail Power Marketing

Provisions of the *Energy Policy Act of 1992 (EPACT)* authorized the Federal Energy Regulatory Commission (FERC) to require open access to the privately-owned electric transmission systems under its jurisdiction much as the Federal Communications Commission and telecommunications deregulation expanded customer access to the nation's long-distance communications lines. The EPACT allowed each State to determine the level of retail competition within its borders, and, for the first time, enabled organizations not previously engaged in electric power transactions, to purchase, transmit and resell electric power across traditional electric utility borders. Those organizations are usually referred to as power marketers.

Power marketers, like traditional electric utilities, buy and sell electric power in the wholesale market. But power marketers differ from traditional electric utilities in both their lack of ownership interest in generation, transmission and distribution facilities, and in the geographic sweep of their transactions. For instance, in 1995 Electric Clearinghouse, Inc. (a FERC registered power marketer) purchased power at off-peak rates from the California Department of Water Resources generated during the early morning hours, scheduled transmission service through several major systems and control areas, and delivered the power across the country to the Jacksonville (FL) Electric Authority. Owing to the three hour time-zone difference, Electric Clearinghouse was able to sell the power at on-peak rates in Florida. Electric Clearinghouse neither owned nor operated any of the generation and transmission facilities used in completing the transaction.

Many power marketers are affiliated with companies owning reserves of other sources of energy, such as natural gas. An exchange of fuel for electricity known as "tolling" allows a power marketer with access to fuel resources to "rent" a generator from an electric utility, supply fuel to the unit to produce electricity, pay the "rental" fee with a portion of the generated

power, and take delivery of the balance for sale to customers.

According to the Edison Electric Institute, the number of registered power marketers has grown substantially in the past few years from 11 in 1993 to almost 300 in 1996. However, fewer than half of those registered with FERC in 1996 actually conducted wholesale transactions. Moreover, many registered power marketers undertook few purchases and sales wishing to simply test techniques and procedures, and observe marketplace opportunities. In 1996, power marketers purchased and sold in the wholesale market over 213 million megawatthours - an increase over 1995 activities of more than 500 percent. Most power marketers make their impact by numerous small transactions with sales to many customers. In fact, many power marketer transactions are with other power marketers. Power marketers normally do not attempt to be an electric utility's all-requirements supplier.

Information published this year in the *Electric Sales and Revenue* reflects the implementation of four "retail wheeling" pilot programs designed by the State legislatures and regulatory agencies as authorized under the EPACT. In 1996, several States reacted to provisions in EPACT allowing "retail wheeling" with four States forming pilot programs where a limited number of retail electric consumers could select their suppliers. Power marketers, as well as marketing affiliates of electric utilities, were active participants in those programs.

Pilot programs were underway in 1996 in Illinois, New Hampshire, Washington, and, beginning in December of 1996, in Idaho. Sales shown in Table B1 for Energy Services, Inc in Oregon and Idaho are the customer's point of delivery (POD) and do not reflect activity related to "retail wheeling" programs in those states. In each case, the customer is a large aluminum smelter located in Washington State with its own transmission line extending across State borders. The POD is the customer's interconnect with its previous supplier's (Bonneville Power Administration) transmission system.

Data reported to the EIA on the Form EIA-861 by pilot participants should be viewed in the context of the respective pilot program. For instance, in New Hampshire's pilot program several thousand retail consumers were able to switch suppliers. New Hampshire electric consumers participating in the pilot program who chose to switch power suppliers, either received two bills, one from the previous supplier and one from the current power supplier, or, under special arrangement, two "service provider" components of a single bill. Data reported to the EIA by the previous supplier does not reflect the revenue from power sales to the pilot consumer or the power

sales (in megawatthours). Revenue data reported to the EIA by the new supplier to the pilot consumer is the revenue from the power sales only and does not include billings to the consumer for line maintenance, meter reading and a "stranded-cost assessment fee." Also, in 1996, no pilot programs operated for a full year. Therefore, the revenue reported to the EIA by pilot program participants for the retail sales shown in Table B1 are not provided. Respondent activities shown in Table B1 are complete as of the time of publication and include data submitted by pilot participants.

## Technical Notes

# Appendix C

## Technical Notes

### Source of Data

The *Electric Sales and Revenue (ESR)* is prepared by the Coal and Electric Data and Renewables Division; Office of Coal, Nuclear, Electric and Alternate Fuels (CNEAF); Energy Information Administration (EIA); U.S. Department of Energy. Data published in the *ESR* are compiled from the EIA statistical survey using Form EIA-861, "Annual Electric Utility Report." A brief summary of the form is presented below.

### Form EIA-861

The Form EIA-861 is a mandatory annual census of electric utilities in the United States. The survey is used to collect information on power production, sales, and demand-side-management data from approximately 3,200 electric utilities. The collected data are used to maintain and update EIA's electric utility frame database. This database enables analysts to respond to queries from the Executive Branch, Congress, other public agencies, and the general public. Data from the Form EIA-861 also appear in other EIA publications: *Electric Power Monthly*, *Electric Power Annual*, *Financial Statistics of Major U.S. Investor-Owned Electric Utilities*, *Financial Statistics of Major U.S. Publicly Owned Electric Utilities*, *Annual Energy Outlook*, and *U.S. Electric Utility Demand-Side Management*. These reports present aggregate totals for electric utilities at the national, regional, and/or State levels.

**Instrument and Design History.** Use of the Form EIA-861 was begun in January 1985 to collect data as of year-end 1984. The Federal Energy Administration Act of 1974 (Public Law 93-275) defines the legislative authority to collect these data.

**Data Processing.** The Form EIA-861 is mailed to the respondents at year end to collect data for the calendar year. The completed forms are to be returned to the EIA by April 30. The data are entered into an interactive on-line system. Internal edit checks are performed to verify that current data total consistently across and between schedules, and are comparable with data reported the previous year. Edit checks are also performed to compare data reported on the Form EIA-861 with similar data reported on the Form EIA-826, "Monthly Electric Utility Sales and Revenue

with State Distributions," Form EIA-412, "Annual Report of Public Electric Utilities," and the Federal Energy Regulatory Commission Form 1, "Annual Report of Major Electric Utilities, Licensees, and Others." Respondents are contacted by telephone to obtain clarification of reported data or to obtain missing data.

The Form EIA-861 totals shown in this publication differ somewhat from the sum of the monthly Form EIA-826 data for sales published in the *Electric Power Monthly* and in issues of the *Electric Power Annual* prior to 1988. Both forms use sectorial classifications (residential, commercial, industrial, and other) based on the classification of consumers by the electric utilities. At the national level, totals from the Form EIA-861 and Form EIA-826 correspond closely (within 1 percent) for all end-use sectors. Some larger differences appear at the State level, however, particularly for Tennessee, due to an inconsistency between the two forms in the classification of commercial and industrial data.

Differences between the Form EIA-861 and Form EIA-826 totals can also result from the Form EIA-826 sampling procedure and/or from nonsampling error in either data collection. One source of nonsampling error in the Form EIA-826 stems from the practice of filing estimates for monthly sales and revenue when actual figures are not yet available. Although respondents are instructed to file revisions, they do not always do so. The respondents are also instructed to review the sum of their EIA-826 monthly data at the end of the reporting year to ensure consistency with Form EIA-861 annual data. Survey analysts at the EIA compare these data series and attempt to resolve any differences. Nevertheless, some reporting differences remain.

Electric revenue and sales data are rounded and reported by electric utilities in thousand dollars and thousand kilowatthours. For this publication, the average revenue per unit of electricity sold is calculated by dividing electric revenue from sales to ultimate consumers by the corresponding sales of electricity. Tables 14 through 17 do not indicate the average revenue per kilowatthour for electric utilities with less than either \$100,000 of revenue or 1 million kilowatthours of sales because the significance of the data is not sufficient to make the ratio meaningful.

## Quality of Data

The Office of Coal, Nuclear, Electric and Alternate Fuels (CNEAF) is responsible for routine data improvement and quality assurance activities. All operations in this office are performed in accordance with formal standards established by the EIA to define statistical quality. Data improvement efforts include automated verification of keyed data, editing by subject matter specialists, and followup on nonrespondents. By law, nonrespondents may be fined or otherwise penalized for not filing a mandatory EIA data form. Before invoking penalties, the EIA tries to obtain the required information by encouraging cooperation of nonrespondents.

Completed forms received by CNEAF are sorted, screened for completeness of reported information, and keyed onto computer tapes for storage and transfer to random access databases for computer processing. The information coded on the computer tapes is manually spot-checked against the forms to certify accuracy of the tapes. Formulas based on historical data values automatically check data input for errors. Data values that fall outside the ranges accepted by the formulas are verified by telephoning respondents to resolve any discrepancies. CNEAF supports the quality assurance efforts of the data collectors by providing advisory reviews of the structure of information requirements and of proposed designs for new and revised data collection forms and systems. Once implemented, the actual performance of working data collection systems is also validated.

## Data Editing System

Data from the Form EIA-861 are edited using automated systems. The edits include both deterministic checks, in which records are checked for the presence and validity of required fields, and statistical checks, in which estimation techniques are used to validate data.

## Confidentiality of the Data

The data collected on the Form EIA-861 used to provide input to this report are not confidential.

## Formulas

*Average Revenue per Kilowatthour.* The average revenue per unit of electricity sold is calculated by dividing total annual revenue from sales to ultimate consumers by the corresponding sales of electricity.

## Calculation Effects of Average Revenue per Kilowatthour and Sales on Revenue.

$\Delta r$  = Change in average revenue from *year*<sub>1</sub> to *year*<sub>2</sub> =  $r_2 - r_1$

$\Delta S$  = Change in sales from *year*<sub>1</sub> to *year*<sub>2</sub> =  $S_2 - S_1$

$\Delta R$  = Change in revenue from *year*<sub>1</sub> to *year*<sub>2</sub> =  $R_2 - R_1$

$\Delta R = (S_2)\Delta r + (r_1)\Delta S$

Effect of change in average revenue on change in

revenue =  $\frac{(S_2)\Delta r}{(S_2)\Delta r + (r_1)\Delta S} \times 100 \%$ .

Effect of change in sales on change in

revenue =  $\frac{(r_1)\Delta S}{(S_2)\Delta r + (r_1)\Delta S} \times 100 \%$ .

## Rounding Rules for Data

Given a number with *r* digits to the left of the decimal and *d+t* digits in the fraction part, with *d* being the place to which the number is to be rounded and *t* being the remaining digits that will be truncated, this number is rounded to *r+d* digits by adding 5 to the (*r+d+1*)th digit when the number is positive or by subtracting 5 when the number is negative. The *t* digits are then truncated at the (*r+d+1*)th digit. The symbol for a rounded number truncated to zero is (\*).

## Data Correction Procedure

The Office of Coal, Nuclear, Electric and Alternate Fuels has adopted the following policy with respect to the revision and correction of Form EIA-861 data published in this report.

- Publication of these data results in their finalization, at which point the database is closed.
- Revisions or corrections are made only in the event that a substantial (greater than 1 percent) data revision is received or a substantial (greater than 1 percent) error is discovered.
- No revisions will be made without the approval of the Director, Coal and Electric Data and Renewables Division.

## **Obtaining Copies of Data or the Form**

Upon EIA approval of the *Electric Sales and Revenue*, the data become available for public use. Computer listings may be obtained by submitting a written request to:

Energy Information Administration, EI-521  
Forrestal Building  
U.S. Department of Energy  
Washington, DC 20585-0650  
Fax: (202) 426-1307.

These data are also available on machine-readable tapes. Tapes may be purchased by using Visa, Master Card, or American Express cards, as well as money orders or checks payable to the National Technical Information Service (NTIS). Purchasers may also use NTIS and Government Printing Office depository accounts. To place an order, contact:

National Technical Information Service (NTIS)  
Office of Data Base Services  
U.S. Department of Commerce  
5285 Port Royal Road  
Springfield, Virginia 22161  
(703) 487-4650.

Copies of the Form EIA-861 and its instructions may be obtained from the National Energy Information Center. The address and telephone number appear below.

National Energy Information Center, EI-231  
Energy Information Administration  
Forrestal Building, Room 1F-048  
Washington, DC 20585-0650  
(202) 586-8800, FAX (202) 586-0727  
E-mail: [infoctr@eia.doe.gov](mailto:infoctr@eia.doe.gov)

The database for the Form EIA-861 is also available via the Internet in compressed format through FTP at <ftp.fedworld.gov> or through the World Wide Web at:

EIA Web Site <http://www.eia.doe.gov>  
EIA Gopher Site <gopher://gopher.eia.doe.gov>  
EIA FTP Site <ftp://ftp.eia.doe.gov>

More information may be obtained by contacting the National Energy Information Center as indicated above.

# **Appendix D**

## **Glossary**

# Appendix D

## Glossary

**Base Bill:** A charge calculated by taking the rate from the appropriate electric rate schedule and applying it to the level of consumption.

**Base Rate:** A fixed per-kilowatt-hour charge for electricity consumed that is independent of other charges and/or adjustments.

**Block Rate Schedule:** An electric rate schedule with a provision for charging a different unit cost for various increasing blocks of demand or energy. Usually a reduced price is charged on succeeding blocks.

**Census Divisions:** The nine geographic divisions of the United States established by the Bureau of the Census, U.S. Department of Commerce, for statistical analysis. The boundaries of Census divisions coincide with State boundaries. The Pacific Division is subdivided into the Pacific Contiguous and Pacific Noncontiguous areas.

**Classes of Service:** Groups of consumers identified on the basis of shared characteristics for the purpose of setting common rates for electric service. These groups are usually residential, commercial, industrial and other.

**Class Rate Schedule:** An electric rate schedule applicable to one or more specified classes of service, groups of businesses, or customer uses.

**Commercial Sector:** The commercial sector is generally defined as nonmanufacturing business establishments, including hotels, motels, restaurants, wholesale businesses, retail stores, and health, social, and educational institutions. Electric utilities may classify commercial service as service that includes all consumers whose demand or annual use exceeds some specified limit. The limit may be set by the utility based on the rate schedule of the utility. If certain consumers (e.g., farms or irrigation projects) cannot be identified as residential, commercial, or industrial, they should be classified with the group they most closely resemble. If there is no rate schedule distinction, utilities may define commercial consumers as those having a demand of less than 1,000 kilowatts.

**Consumer Charge:** An amount charged periodically to a consumer for such utility costs as billing and meter reading, without regard to demand or energy consumption.

**Cooperative Electric Utility:** A group organized under the law into a utility company that will generate, transmit, and/or distribute supplies of electric energy to a specified area not being serviced by another utility. Such ventures are generally exempt from the Federal income tax laws. Most electric cooperatives have initially been financed by the Rural Utilities Service, U.S. Department of Agriculture.

**Cost of Service:** A ratemaking concept used for the design and development of rate schedules to ensure that the filed rate schedules recover only the cost of providing the electric service at issue. These costs include operating and maintenance expenses, depreciation and amortization expenses, and income and other taxes that the regulatory agency finds just and reasonable to include in costs considered for ratemaking. In addition, privately owned utilities may include in the cost of service an allowance for return on capital (usually computed by applying a rate of return to the rate base). This concept represents an effort to equate the costs incurred by the utility with the revenue received for the service provided to each of the consumer classes.

**Demand (Electric):** The rate at which electric energy is delivered to or by a system, part of a system, or piece of equipment, at a given instant or averaged over any designated period of time.

**Demand Charge:** The portion of the consumer's bill for electric service that is based on the consumer's maximum electric capacity usage.

**Economy of Scale:** The principle that larger production facilities have lower unit costs than smaller facilities.

**Electric Power Industry:** The privately, publicly, federally, and cooperatively owned electric utilities and nonutilities of the United States taken as a whole. Includes all electric systems serving the public: regulated investor-owned electric utility companies; Federal power projects; State, municipal, and other government-owned systems, including electric public utility districts; electric cooperatives, including generation and transmission entities; and nonutilities.

**Electric Rate:** The price set for a specified amount of electricity in an electric rate schedule or sales contract.

**Electric Rate Schedule:** A statement of the electric rate and the terms and conditions governing its application, including attendant contract terms and conditions that have been accepted by a regulatory body with appropriate oversight authority.

**Electric Utility:** An enterprise that is engaged in the generation, transmission, or distribution of electric energy primarily for use by the public and that is the major power supplier within a designated service area. Electric utilities include privately owned, publicly owned, cooperatively owned, and government-owned (municipals, Federal agencies, State projects, and public power districts) systems.

**Energy:** The capacity for doing work as measured by the capability of doing work (potential energy) or the conversion of this capability to motion (kinetic energy). Energy has several forms, some of which are easily convertible and can be changed to another form useful for work. Most of the world's convertible energy comes from fossil fuels that are burned to produce heat that is then used as a transfer medium to mechanical or other means in order to accomplish tasks. Electrical energy is usually measured in kilowatthours, while heat energy is usually measured in British thermal units.

**Energy Information Administration (EIA):** An independent agency within the U.S. Department of Energy that develops surveys, collects energy data, and produces analyses of energy issues and models to project future developments. The agency must respond to requests of Congress, other elements within the Department of Energy, Federal Energy Regulatory Commission, the Executive Branch, and its own independent needs, and must assist the general public and other interest groups without taking a policy position.

**Federal Energy Regulatory Commission (FERC):** A quasi-independent regulatory agency within the Department of Energy having jurisdiction over interstate electricity sales, wholesale electric rates, hydroelectric licensing, natural gas pricing, oil pipeline rates, and gas pipeline certification.

**Flat and Meter Rate Schedule:** An electric rate schedule consisting of two components, the first of which is a service charge, and the second, a price for the energy consumed.

**Flat Demand Rate Schedule:** An electric rate schedule based on billing demand that provides no charge for energy.

**Gigawatt (GW):** One billion watts.

**Gigawatthour (GWh):** One billion watthours.

**Industrial Sector:** The industrial sector is generally defined as including manufacturing, construction, mining, agriculture, fishing, and forestry establishments under Standard Industrial Classification (SIC) codes 01 through 39. The utility may classify industrial service using the SIC codes, or based on demand or annual usage exceeding some specified limit. The

limit may be set by the utility based on its own rate schedule. Sales to consumers (i.e., farms and irrigation) that the utility has no system for separating into residential, commercial, and industrial classifications should be classified based on the schedule they most closely resemble. If there is no rate schedule distinction, utilities may define industrial consumers as those having a demand equal to or greater than 1,000 kilowatts.

**Interdepartmental Sales:** Includes amounts charged by the electric department at tariff or other specified rates for electricity supplied by it to other utility departments.

**Investor-Owned Electric Utility:** A class of utility that is investor-owned and organized as a tax-paying business, usually financed by the sales of securities in the capital market.

**Kilowatt (kW):** One thousand watts.

**Kilowatthour (kWh):** One thousand watthours.

**Megawatt (MW):** One million watts.

**Megawatthour (MWh):** One million watthours.

**Other Sector:** Electricity supplied to public street and highway lighting, other service to public authorities, service to railroads and railways, and interdepartmental service.

**Power (Electrical):** An electric unit of power called a voltampere is equal to the product of 1 volt and 1 ampere. This is equivalent to 1 watt for a direct current system, and a unit of apparent power is separated into real and reactive power. Real power is the work-producing part of apparent power that measures the rate of supply of energy and is denoted as kilowatts (kW). Reactive power is the portion of apparent power that does no work and is referred to as kilovars; this type of power must be supplied to most types of magnetic equipment, such as motors, and is supplied by generator or by electrostatic equipment. Voltamperes are usually divided by 1,000 and called kilovoltamperes (kVA). Energy is denoted by the product of real power and the length of time utilized; this product is expressed as kilowatthours.

**Power Marketers:** Business entities engaged in buying, selling, and marketing electricity. Power marketers do not usually own generating or transmission facilities. Power marketers, as opposed to Power Brokers, take ownership of the electricity and are involved in interstate trade. These entities must file with the Federal Energy Regulatory Commission for approval of rate tariffs.

**Public Authorities:** Electricity supplied to municipalities or divisions or agencies of State and Federal governments, usually under special contracts or agreements that are applicable only to public authorities.

**Public Street and Highway Lighting Service:** Electricity supplied and services rendered for the purpose of lighting streets, highways, parks, and other public

places; or for traffic or other signal system service, for municipalities, or other divisions or agencies of State or Federal governments.

**Publicly Owned Electric Utility:** A class of utility that includes those utilities operated by municipalities, political subdivisions, utility or power districts, and State and Federal power agencies.

**Railroad and Railway Electric Service:** Electricity supplied to railroads and interurban and street railways, for general railroad use, including the propulsion of cars or locomotives, where such electricity is supplied under separate and distinct rate schedules.

**Rate Base:** The value of property upon which a utility is permitted to earn a specified rate of return as established by a regulatory authority. The rate base generally represents the value of property used by the utility in providing service and may be calculated by any one or a combination of the following accounting methods: fair value, prudent investment, reproduction cost, or original cost. Depending on which method is used, the rate base includes cash, working capital, materials and supplies, and deductions for accumulated provisions for depreciation, contributions in aid of construction, customer advances for construction, accumulated deferred income taxes, and accumulated deferred investment tax credits.

**Residential Sector:** The residential sector includes private homes, including apartment buildings, that consume energy primarily for space heating, water heating, air conditioning, lighting, refrigeration, cooking, and clothes drying. The classification of an individual consumer's account, where the use is both residential and commercial, is based on principal use.

**Retail:** Sales covering electrical energy supplied for residential, commercial, and industrial end-use purposes. Other small classes, such as agriculture and street lighting, also are included in this category.

**Rural Electrification Administration (REA):** See Rural Utilities Service (RUS).

**Rural Utilities Service (RUS) (formerly the Rural Electrification Administration):** A lending agency of the U.S. Department of Agriculture, the RUS makes self-liquidating loans to qualified borrowers to finance electric and telephone service to rural areas.

The RUS also finances the construction and operation of generating plants, electric transmission and distribution lines, or systems for the furnishing of initial and continued adequate electric services to persons in rural areas not receiving central station service.

**Sales:** The amount of kilowatthours sold in a given period of time; usually grouped by classes of service, such as residential, commercial, industrial, and other. Other sales include sales for public street and highway lighting, sales to public authorities, sales to railroads and railways, and interdepartmental sales.

**Schedule:** A statement of the pricing format of electricity and the terms and conditions governing its applications.

**Seasonal Rates:** Different seasons of the year are structured into an electric rate schedule whereby an electric utility provides service to consumers at different rates. The electric rate schedule usually takes into account demand based on weather and other factors.

**Special Contract Rate Schedule:** An electric rate schedule for an electric service agreement between a utility and another party in addition to, or independent of, any standard rate schedule.

**Special Purpose Rate Schedule:** An electric rate schedule limited in its application to some particular purpose or process within one, or more than one, type of industry or business.

**Tariff:** A published volume of rate schedules and general terms and conditions under which a product or service will be supplied.

**Time-of-Day Rate:** The rate charged by an electric utility for service to various classes of customers. The rate reflects the different costs of providing the service at different times of the day.

**Watt:** The electrical unit of power. The rate of energy transfer equivalent to 1 ampere flowing under a pressure of 1 volt at unity power factor.

**Watthour (Wh):** An electrical energy unit of measure equal to 1 watt of power supplied to, or taken from, an electric circuit steadily for 1 hour.
