

Fuel Oil and Kerosene Sales 1995

August 1996

Energy Information Administration

Office of Oil and Gas
U.S. Department of Energy
Washington DC 20585

Contacts

The *Fuel Oil and Kerosene Sales 1995* report is prepared by the Energy Information Administration (EIA) under the general direction of Michael Griffey (202) 586-9601, Petroleum Marketing Division, Office of Oil and Gas.

Detailed, technical questions about tables referencing the form EIA-821 may be directed to:

Alice Lippert (202) 586-9600

Fuel Oil and Kerosene Data Available Through Electronic Access

Annual petroleum marketing data are available through electronic access that contains statistics from the *Fuel Oil and Kerosene Sales 1995* report. Included are annual sales data on petroleum volumes of kerosene, distillate fuel oils, and residual fuel oils by State. Annual historical data at the national level are provided in summary tables.

For ***Fuel Oil and Kerosene Sales on the Internet***, access EIA's home page at <http://www.eia.doe.gov>.

For obtaining ***Fuel Oil and Kerosene Sales personal computer diskette*** by mail, order from:

Office of Scientific and Technical Information
Request Services
P.O. Box 62
Oak Ridge, Tennessee 37831
(615) 576-8401

National Technical Information Service (NTIS)
Office of Data Base Services
U.S. Department of Commerce
5285 Port Royal Road
Springfield, Virginia 22161
(703) 487-4650

The ***Fuel Oil and Kerosene Sales*** diskette is in ASCII text format on a double-sided high-density 3.5 inch diskette for use with IBM-compatible personal computers.

Sales of Fuel Oil and Kerosene in 1995

1. Sales of Distillate Fuel Oil by End Use in the United States: 1991-1995	13
2. Sales of Residual Fuel Oil by End Use in the United States: 1991-1995	14
3. Sales of Kerosene by End Use in the United States: 1991-1995	14
4. Sales of Distillate Fuel Oil by End Use, 1994 and 1995	15
5. Sales of Residual Fuel Oil by End Use, 1994 and 1995	19
6. Sales of Kerosene by End Use, 1994 and 1995	21
7. Sales for Residential Use: Distillate Fuel Oil and Kerosene, 1995	23
8. Sales for Commercial Use: Distillate Fuel Oil, Residual Fuel Oil, and Kerosene, 1995	24
9. Sales for Industrial Use: Distillate Fuel Oil, Residual Fuel Oil, and Kerosene, 1995	25
10. Sales for Farm Use: Distillate Fuel Oil and Kerosene; Sales for Electric Utility and Oil Company Uses: Distillate Fuel Oil and Residual Fuel Oil, 1995	26
11. Sales for Transportation Use: Distillate Fuel Oil and Residual Fuel Oil, 1995	27
12. Sales for Military, Off-Highway, and All Other Uses: Distillate Fuel Oil, Residual Fuel Oil, and Kerosene, 1995	28

Adjusted Sales of Fuel Oil and Kerosene in 1995

13. Adjusted Sales of Distillate Fuel Oil by End Use in the United States: 1991-1995	30
14. Adjusted Sales of Residual Fuel Oil by End Use in the United States: 1991-1995	31
15. Adjusted Sales of Kerosene by End Use in the United States: 1991-1995	31
16. Adjusted Sales of Distillate Fuel Oil by End Use, 1994 and 1995	32
17. Adjusted Sales of Residual Fuel Oil by End Use, 1994 and 1995	36
18. Adjusted Sales of Kerosene by End Use, 1994 and 1995	38
19. Adjusted Sales for Residential Use: Distillate Fuel Oil and Kerosene, 1995	40
20. Adjusted Sales for Commercial Use: Distillate Fuel Oil, Residual Fuel Oil, and Kerosene, 1995	41

	Page
21. Adjusted Sales for Industrial Use: Distillate Fuel Oil, Residual Fuel Oil and Kerosene, 1995	42
22. Adjusted Sales for Farm Use: Distillate Fuel Oil and Kerosene; Adjusted Sales for Electric Utility and Oil Company Uses: Distillate Fuel Oil and Residual Fuel Oil, 1995	43
23. Adjusted Sales for Transportation Use: Distillate Fuel Oil and Residual Fuel Oil, 1995	44
24. Adjusted Sales for Military, Off-Highway, and All Other Uses: Distillate Fuel Oil, Residual Fuel Oil, and Kerosene, 1995	45

Residual Fuel Oil Use Continues To Plummet

In 1995, residual fuel oil sales in the United States decreased for the sixth year in a row, dropping a dramatic 16.9 percent from the previous year to the lowest level in 57 years.¹ Residual fuel oil sales (1) dropped from 14.8 billion gallons in 1994 to 12.3 billion gallons in 1995, (2) are off 43.6 percent since 1989, when sales were 21.8 billion gallons, and (3) decreased 73.8 percent since their peak in 1977 when sales were 47.1 billion gallons.

Figure FE1 illustrates the declining sales of residual fuel oil since their peak in 1977. The three main factors that have led to this long term decline -- price, availability of alternatives, and environmental regulations -- are discussed below. It is important to note that the most important factor affecting short-term demand is the weather.

Price

The price of residual fuel oil and its alternatives plays a critical role in demand. The anticipation of low fuel costs drove utilities to build many residual fuel oil burning power plants in the 1960s and early 1970s. The low prices during those times and the building of the new plants increased residual fuel oil demand at utilities from 3.8 billion gallons in 1963 to 23.9 billion gallons by 1977. The large increase in price in 1974, coupled with the oil embargo, began to put a damper on this electric utility use growth trend. These events also reversed what had been growing demand for heating (apartments mainly), industrial use, and vessel bunkering. Utility, industrial, and bunkering demand recovered temporarily and even rose for a few years,

Figure FE1. Residual Fuel Oil Sales, 1977-1995

¹The last time sales were lower was 1938, after the big oil boom of 1937 went bust, and the resulting stock drawdown in 1938 left sales at only 12.26 billion gallons.

but the 1979 price increases ended once and for all the rising trend for residual fuel oil. Demand in fact plunged as prices went higher in the early 1980s. A temporary reversal did not occur again until the crash of oil prices in 1986. Part of the reason for steady (rather than falling) demand in 1988 was favorable residual fuel oil prices compared to natural gas. Competitive prices to electric utilities in 1992, 1993, and 1994 also helped slow the drop in residual fuel oil demand.

Price plays an even more important factor in the vessel bunkering market; when California raised taxes on bunkering in 1993, demand in this sector took a dramatic plunge.

Availability of Alternatives

The increased availability of coal and nuclear electric power over the past twenty years has played a significant role in greatly reducing the demand for residual fuel oil. Comparing 1977 to 1995 in terms of billion kilowatt-hours generated, coal increased 677 and nuclear 397; petroleum was down 297 (*Annual Energy Review* 1995, July 1996). This increasing share of electricity being produced by coal and nuclear power has allowed natural gas to take more market share from residual fuel oil in the commercial and industrial sectors. No alternatives exist for residual fuel oil in the vessel bunkering market.

Environmental Regulations

The Clean Air Act Amendments (CAAA) of 1990 and the Oil Pollution Act of 1992 are two of the main environmental laws that have led to reduced demand for residual fuel oil. The CAAA of 1990 mandated reduction in various pollutants in fuels and in emissions from stationary sources. To produce the fuels required costly upgrades to refineries, which increased the costs of all petroleum products. These upgrades have also substantially reduced the amount of residual fuel oil that is produced, which tends to increase the price as well. Some high sulfur residual fuel oil is still produced, but the markets for it are limited.

The Oil Pollution Act of 1992 requires various measures to reduce the chances of and the damage from oil

spills from tankers. It also requires tanker owners to have a substantial amount of liability insurance. These rules have driven some bunker oil dealers out of the business, and discouraged tanker operators from stopping in U.S. ports for fuel. Bunker sales in the United States remain steady due to lack of alternative fuels and competitive prices with foreign ports.

Prospects for the Future

Residual fuel oil use will continue its downward trend in the commercial sector, since apartment buildings are simply not being built with residual fuel oil burners. A similar trend will be evident in the industrial sector for the same reason, although there may be swings upward occasionally in residual fuel oil demand, when the price is low enough; the slope downward will also be less steep since industrial facilities tend to have longer life spans than do apartment buildings.

Bunker sales in the United States should remain more stable than the commercial and industrial sectors, but will probably be reduced slowly over time as larger vessels with more efficient engines come onto the market and ships more efficiently utilize their cargo capacities.

The electric utility sector should continue to decrease its demand for residual fuel oil as more natural gas and coal plants come on line. The deregulation of the utility industry should also reduce demand; utilities will be reluctant to use a more expensive fuel like residual fuel oil if purchasing electricity from another power producer is less costly. One factor that could slow the drop in residual fuel oil use in the future is the decommissioning of nuclear power plants over time. If additional gas and coal burning units come on line though, residual fuel oil demand will continue to drop at a quicker pace.

In the short-term, residual fuel oil use will go up occasionally, on an annual basis, when the Northeast has very cold winters. In 1996 for example, residual fuel oil use will probably be up over 1995 since the first quarter of 1996 was extremely cold. The summer has been mild though, so the key will be the upcoming winter.

^E Estimated data. Illinois' and Nevada's annual estimates are based on eleven months of data. Since 1994 data for Oregon were not available, estimate is based on 1993 data. Oregon's 1995 data represent a Federal Highway Administration estimate.

Dashes (-) = No data reported.

Note: Totals may not equal sum of components due to independent rounding.

Sources: • Energy Information Administration Form EIA-821, "Annual Fuel Oil and Kerosene Sales Report," for 1994 and 1995.

• On-Highway Diesel data are Federal Highway Administration statistics of highway special fuels use.

^E Estimated data. Illinois' and Nevada's annual estimates are based on eleven months of data. Since 1994 data for Oregon were not available, estimate is based on 1993 data. Oregon's 1995 data represent a Federal Highway Administration estimate.

Dashes (-) = No data reported.

Note: Totals may not equal sum of components due to independent rounding.

Sources: • Energy Information Administration Form EIA-821, "Annual Fuel Oil and Kerosene Sales Report," for 1995.

• On-Highway Diesel data are Federal Highway Administration statistics of highway special fuels use.

Dashes (-) = No data reported.

Note: Totals may not equal sum of components due to independent rounding.

Sources: • Energy Information Administration Form EIA-821, "Annual Fuel Oil and Kerosene Sales Report," for 1995.

• Kerosene data are based on data from the Energy Information Administration's "Petroleum Supply Annual," Volume 1, 1995, (DOE/EIA-0340(95)/1).

Adjusted Sales of Fuel Oil and Kerosene in 1995

The following tables contain estimates of distillate fuel oil that have been adjusted at the PAD district level to equal published EIA volume estimates of petroleum products supplied in the U.S. marketplace. The kerosene and residual fuel oil sales estimates have been adjusted at the national level. Historically, kerosene estimates have always been adjusted at the PAD district level. However, in 1992, certain kerosene estimates at the PAD district level resulted in negative numbers. Hence, the adjustment procedure was changed to display positive sales volumes of kerosene for all PAD districts.

The products supplied estimates can be found in the 1991 through 1995 issues of the *Petroleum Supply Annual*. For certain sales categories, data obtained from alternate sources are used instead of the adjusted numbers. See "Technical Note 3" in the Appendix for further explanation of data adjustments.

Total domestic adjusted sales of fuel oil and kerosene decreased slightly from 64.9 billion gallons in 1994 to 63.0 billion gallons in 1995. While adjusted sales of distillate increased 1.4 percent in 1995, residual fuel oil dropped 16.6 percent. Kerosene adjusted sales increased by 10.4 percent.

Table 13. Adjusted Sales of Distillate Fuel Oil by End Use in the United States: 1991-1995
(Thousand Gallons)

^E Estimated data. Illinois' and Nevada's annual estimates are based on eleven months of data. Since 1994 data for Oregon were not available, estimate is based on 1993 data. Oregon's 1995 data represent a Federal Highway Administration estimate.

Dashes (-) = No data reported.

Note: Totals may not equal sum of components due to independent rounding.

Sources: • Energy Information Administration Form EIA-821, "Annual Fuel Oil and Kerosene Sales Report," for 1994 and 1995.

• Electric Utility data are based on data obtained on Form EIA-759, "Monthly Power Plant Report," and Form FERC-423, "Monthly Report of Cost and Quality of Fuels for Electric Plants."

• On-Highway Diesel data are Federal Highway Administration statistics of highway special fuels use.

Technical Notes

Technical Notes

Note 1: EIA-821: Annual Fuel Oil and Kerosene Sales Report, 1995

Background

The EIA-821, "Annual Fuel Oil and Kerosene Sales Report" survey was implemented to meet Energy Information Administration (EIA) legislative mandates and data user needs. Form EIA-821 is used to gather data on the sales to end users of distillate fuel oil, residual fuel oil, and kerosene. The data are used to determine the level of demand by end-use category and product at the State, regional, and national levels. This mandatory report is authorized by the Federal Energy Administration Act of 1974 (P. L. 93-275).

The predecessor survey to the EIA-821 was the EIA-172, "Sales Report of Fuel Oil and Kerosene" survey. The EIA-172 was conducted for reference years 1979 through 1982. Due to a serious deterioration in the sample of respondents during the 4-year period, the Form EIA-172 data were not collected for 1983. Instead, estimates for 1983 were published and a new sample of respondents was designed and selected from an improved sampling frame. The EIA-821 survey commenced with reference year 1984.

Discussion of Sampling Frame

The target population for the fuel oil and kerosene sales survey is the universe of companies that sell fuel oil and kerosene to end users.

The EIA-863 data base provided the sampling frame for the 1995 EIA-821 survey. The EIA-863, "Petroleum Product Sales Identification Survey," was mailed to approximately 30,000 companies in January 1995 to collect 1994 State-level sales volume data for No. 2 distillate, residual fuel, motor gasoline, and propane. Companies also indicated if they sold kerosene. The No. 2 distillate data were further identified by residential and nonresidential end use, and non-end-use sales; the residual data were identified by end use and non-end-use; motor gasoline was identified by end use and non-end use and by conventional and oxygenated and/or reformulated; and propane was identified by residential, nonresidential, and non-end-use sales. The mailing list for the EIA-863 survey was constructed by

merging and unduplicating the 1991 frame file and more than 50 State and commercial lists. In addition, company/ State-level volumes for distillate fuel, residual fuel, motor gasoline, and propane from the 1994 EIA-821 survey were merged with the EIA-863 to yield a combined data file. The transformed and edited version of the frame was then used to design and select the 1995 EIA-821 sample.

It should be noted that truck stops selling No. 2 diesel fuel were not specifically included in the EIA-863 survey. Therefore, the EIA-821 survey does not include all sales of No. 2 distillate through retail truck stops. However, to compensate for this shortage in coverage, data from the Federal Highway Administration are presented in the tables for on-highway diesel sales.

The sampling frame also lacked full coverage of kerosene retailers, many of whom are hardware stores and service stations. To account for all kerosene volumes supplied to the marketplace, aggregate reported kerosene volumes are set equal to the products supplied volumes published in the *Petroleum Supply Annual*.

Discussion of the Sample Design

The purpose of the EIA-821 sample design was to produce State-level estimates of total sales for the following five target variables: (1) residential No. 2 distillate, (2) other retail No. 2 distillate, (3) wholesale No. 2 distillate, (4) retail residual, and (5) wholesale residual. A separate sample was initially designed for each target variable.

Companies were divided into two basic types of strata: certainty and noncertainty. Companies selected with certainty were:

- all refiners and gas plant operators
- companies doing business in four or more States
- companies accounting for 5 percent or more of the distillate or residual fuel oil volume for any target variable or particular end-use category sold in a State.
- companies accounting for 5 percent or more of the kerosene volume sold in a State in an earlier EIA-821 survey.

- augmented frame units, e.g., vessel bunkering, for which no attribute data were available.

Firms determined not to be selling distillate or residual fuel oil or kerosene were removed from the frame file. Volumes for nonrespondents to the EIA-863 who had reported in the previous frame survey or in a sample survey were imputed. The imputed nonrespondents and the noncertainty companies were stratified by sales volume for each target variable. Strata boundaries were determined using the Dalenius-Hodges procedures, allowing the number of strata and the strata boundaries to vary by State. Nonrespondents for whom no previous information was available were classified in a separate stratum and sampled with reduced probabilities of selection.

Neyman allocation was used to allocate the number of companies required for each strata to obtain the required levels of accuracy: a 2.5 percent coefficient of variation for residual fuel oil and a 5 percent coefficient of variation for distillate fuel oil. Sample selections were then performed simultaneously from the same random list for the five samples to produce a final linked sample of approximately 4,700 companies. This method reduced the total survey sample size while improving volume estimates. Selected companies were asked to report sales by end-use categories for distillate and residual fuel oil and kerosene.

Imputation and Estimation

Survey data gathered from the respondents may contain incomplete reporting, total nonresponse, or values that fail editing. Missing data are estimated, or implicitly imputed for, using the strata means and treated the same as reported data. The weighted estimate is defined as follows:

$$\hat{V} = \sum_h N_h \left(\sum_i W_{hi} V_{hi} / \sum_i W_{hi} \right)$$

where:

- \hat{V} = total estimated volume
- \sum_h = denotes summation over strata
- N_h = stratum population for stratum h
- \sum_i = denotes summation over units within stratum h
- V_{hi} = volume reported for unit i in stratum h
- W_{hi} = weight attached to unit i in stratum h.

where: W_{hi} is inversely proportional to the probability of inclusion in the linked sample.

The degree of imputation by product and end use at the U.S. total level ranged as follows for the 1995 EIA-821 data: distillate, 1.6 percent for military use to 23.0 percent for off-highway use; residual fuel oil, 0.02 percent for oil company use to 2.5 percent for commercial use; and kerosene, 4.0 percent for commercial use to 6.8 percent for farm use.

Collection Methods

The EIA-821 form was mailed in January 1996 to all companies selected for participation in the 1995 reference year survey. The completed form was due to EIA on March 1, 1996. A second request was sent by certified mail to nonrespondents approximately 1 month after the filing deadline. Follow-up telephone calls were made to collect outstanding data and to verify reported data. Late submissions and resubmissions were processed when received.

Data Processing

As EIA-821 forms were received, they were logged into an automated Survey Control File that maintains company identification and survey form status information for each company selected to participate in the survey. The data were reviewed manually, entered onto the computer files, and then processed through an automated edit program which detected missing data and outlying values. Data that failed the edits were resolved through telephone calls to the data reporters and corrections were entered onto the computer files. Preliminary estimates were generated and processed through a series of validation procedures to flag and rectify potential misreporting of data. Statistical reports, including publication tables, were produced using only acceptable and verified data.

Note 2: Reliability of the Data

Two types of errors are associated with data produced from a sample survey---sampling errors and nonsampling errors. Sampling errors occur because the estimates are based on a sample rather than on a census. The particular sample used for the EIA-821 survey is one of a large number of samples of equal size which could have been selected from the sampling frame using the same sample design. Each of these samples would produce a different estimate. If the estimates were averaged over all possible samples, the result would be the same as the estimate derived from a census of the sampling frame. The sampling error is a measure of variability among the estimates from all possible samples and, thus, is a measure of the

precision with which an estimate from a particular sample approximates the results of a census.

Nonsampling errors and possibly biases can arise from a number of sources: (1) inability to obtain information about all cases in the sample, (2) response errors, (3) differences in the interpretation of questions or definitions, (4) mistakes in recording or coding of the data obtained, and (5) other errors of collection, response, coverage, and estimation for missing data. Bias is the difference between the average of the estimates over all possible samples of the same size and design, and the true value being estimated. It is not possible to estimate bias using the results of one sample.

Data obtained from alternate sources are not subject to sampling errors, but may be subject to nonsampling errors, the magnitudes of which are unknown. Nonsampling errors for survey estimates and estimates adjusted to alternate sources cannot be determined, but attempts are made throughout survey processing to minimize this type of error.

Data in Tables 1 through 12 are based on survey data which are subject to sampling errors. Coefficients of variation, which are estimates of sampling errors, are presented for the retail target variables in the following table for the 1992 survey. The coefficients of variation (CV) were estimated by:

$$C V(\hat{V}) = \frac{\sqrt{V A R(\hat{V})}}{\hat{V}}$$

where:

$$V A R(\hat{V}) = \sum_h n_h \left(1 - \frac{n_h}{N_h}\right) S_h^2$$

$$S_h^2 = \frac{\sum_{i=1}^{n_h} W_i^2 V_i^2 + \bar{V}_h^2 \sum_{i=1}^{n_h} W_i^2 - 2 \bar{V}_h \sum_{i=1}^{n_h} W_i^2 V_i}{n_h - 1}$$

$$\bar{V}_h = \frac{\sum_{i=1}^{n_h} W_i V_i}{\sum_{i=1}^{n_h} W_i}$$

- \hat{V} = total estimated volume,
- N_h = stratum population for stratum h,
- n_h = number of sample units in stratum h,
- V_i = volume for unit i,
- W_i = weight for unit i.

Response rates also offer some indication of the reliability and comprehensiveness of survey results. For the 1995 EIA-821 survey, the overall response rate (the number of submissions received, divided by the number of submissions solicited and expected, times 100) was 90.4 percent.

Sources: • Energy Information Administration Form EIA-821, "Annual Fuel Oil and Kerosene Sales Report," for 1995.

Note 3: Data Adjustments

Alternate Source Data

After all preliminary tabulations were verified, comparisons were made between the survey results and available alternate source data. The following end-use categories were replaced by alternate source data at the U.S., Petroleum Administration for Defense (PAD) district, or State level:

Tables 1 through 12:

On-Highway Diesel. Distillate fuel oil by State was calculated from the Federal Highway Administration data on highway use of special fuels. Of the 1991 through 1995 special fuels, more than 98 percent is diesel.

Tables 13 through 24:

Electric Utility. National-level distillate and residual fuel oil sales for electric utility use were calculated from annual aggregations of data collected on forms EIA-759, "Monthly Power Plant Report," and FERC-423, "Monthly Report of Cost and Quality of Fuels for Electric Plants." Form EIA-759 consumption data for light oils include No. 2 fuel oil, kerosene, and jet fuel; the heavy oils include No. 4 fuel oil, residual fuel oil, and crude oil. Using receipt data from Form FERC-423, the No. 4 fuel oil receipts were deleted from the heavy oil consumption data and added to the light oil consumption data. The resultant distillate (light oils) and residual (heavy oils) consumption data were added to the stock change of light oils and heavy oils, respectively, from Form EIA-759 to obtain the estimate of sales. Allocations at the State level were based on the EIA-821 survey.

On-Highway Diesel. Distillate fuel oil by State was calculated from the Federal Highway Administration data on highway use of special fuels. Of the 1991 through 1995 special fuels, more than 98 percent is diesel.

1991 through 1995 Adjustments

Kerosene volumes for 1994 and 1995 in Tables 1 through 24 are adjusted at the national level to equal products supplied volumes as published in the

"Detailed Statistics" section of the *Petroleum Supply Annual* (PSA). The 1995 survey resulted in 790,376 thousand gallons of kerosene at the national level. The products supplied volume at the national level for kerosene was 828,450 thousand gallons. Hence, the adjustment factor at the national level for 1995 was 1.05.

For 1991 through 1992, kerosene volumes are adjusted at the national level in Tables 1 through 12 and at the PAD district level in Tables 13 through 24.

Volumes of distillate fuel oil in Tables 13 through 24 were adjusted at the PAD district level to equal products supplied volumes. The adjustment factors at the PAD district level for 1995 are as follows:

Distillate Fuel Oil

- PAD District I: .92
- PAD District II: 1.03
- PAD District III: .79
- PAD District IV: 1.10
- PAD District V: .70

For Tables 13 through 24, total sales at the PAD district level equal the products supplied volumes as reported in the PSA, 1991 through 1995. For example, the 1995 survey yielded a volume for distillate residential use in PAD District II of 897,664 thousand gallons. The total distillate volume for PAD District II was 6,346,087 from the survey, after subtracting the volume coming from alternate sources. The product supplied total distillate volume for PAD District II was 6,529,146 after removing alternate source volume. Hence, the adjusted 1995 estimate of distillate for residential use in PAD District II was $(6,529,146/6,346,087) \times 897,664 = 923,558$.

For distillate fuel oil in Tables 13 through 24, the PAD district adjustments were made to each State and product-use category except on-highway diesel use, and electric utility use.

Volumes of residual fuel oil in Tables 13 through 24 were adjusted at the national level to equal the products supplied estimate. The 1995 survey yielded 12,206,854 thousand gallons of residual fuel oil, while the products supplied volume at the national level was 13,058,262 thousand gallons. Thus, the adjustment factor at the national level for 1995 was 1.09, after subtracting the volumes coming from alternate sources. For residual fuel oil, the adjustments were made to each State and end-use category except electric utility use.

Note 4: End-Use Descriptions and Petroleum Product Definitions

End-Use Descriptions

Residential Use. Includes sales for use in private households for space heating, water heating, cooking, etc. Sales to farm houses are reported under "Farm Use."

Commercial Use. Includes sales for use in nonmanufacturing establishments such as motels, apartment buildings, restaurants, retail stores, institutions, government buildings, schools, and laundries for space heating, water heating, and cooking.

Industrial Use. Includes sales to mines, smelters, and plants engaged in producing manufactured products, processing and assembling goods, etc. Also includes space heating. Excludes oil company use, as defined below.

Oil Company Use. Includes sales to drilling companies, pipelines or other related oil companies not engaged in the selling of petroleum products. Includes fuel oil that was purchased or produced and used by company facilities for the operation of drilling equipment, other field or refinery operations, and space heating at petroleum refineries, pipeline companies, and oil-drilling companies. Oil used to bunker vessels is counted under vessel bunkering. Sales to other oil companies for field use are included, but sales for use as refinery charging stocks are excluded.

Farm Use. Includes sales for use in tractors, irrigation pumps and other agricultural machinery, as well as that used for crop drying, smudge pot fuel, space heating of buildings (including farm houses), cooking, and any other use by the agriculture industry.

Electric Utility Companies. Includes sales to electric utility companies, including that used for the generation of electricity. Volumes imported and used directly by electric utility companies are also included.

Railroad Use. Includes sales to railroads, for any use, including that used for heating buildings operated by railroads.

Vessel Bunkering. Includes sales for the fueling of commercial or private boats, such as pleasure craft, fishing boats, tugboats, and ocean-going vessels, including vessels operated by oil companies. Excluded are volumes sold to the U.S. Armed Forces.

On-Highway Diesel Use. Includes sales for use in motor vehicles. Volumes used by companies in the marketing and distribution of petroleum products are also included.

Military Use. Includes sales to the Armed Forces, including volumes sold to the Defense Fuel Supply Center (DFSC) for use by all branches of the Department of Defense (DOD).

Off-Highway Use. Includes sales for use in:

1. **Construction.** Construction equipment including earthmoving equipment, cranes, stationary generators, air compressors, etc.
2. **Other.** Sales for off-highway uses other than construction. Sales for logging are included in this category. Volumes for off-highway use by the agriculture industry are reported under "Farm Use."

All Other Uses. Sales for all other uses not included in any other end-use category are reported here.

Definitions of Petroleum Products and Other Related Terms

ASTM. The acronym for the American Society for Testing and Materials.

Distillate Fuel Oil. A general classification for one of the petroleum fractions produced in conventional distillation operations. It is used primarily for space heating, on- and off-highway diesel engine fuel (including railroad engine fuel and fuel for agricultural machinery), and electric power generation. Included are products known as No. 1, No. 2, and No. 4 fuel oils and No. 1, No. 2, and No. 4 diesel fuels.

1. **No. 1 Distillate.** A petroleum distillate which meets the specifications for No. 1 heating or fuel oil as defined in ASTM D 396 and/or the specifications for No. 1 diesel fuel as defined in ASTM Specification D 975.
 - a. **No. 1 Diesel Fuel.** A volatile distillate fuel oil with a boiling range between 300 and 575 degrees Fahrenheit and used in high-speed diesel engines generally operated under wide variations in speed and load. Includes type C-B diesel fuel used for city buses and similar operations. Properties are defined in ASTM Specification D 975.
 - b. **No. 1 Fuel Oil.** A light distillate fuel oil intended for use in vaporizing pot-type

burners. ASTM Specification D 396 specifies for this grade maximum distillation temperatures of 400 degrees Fahrenheit at the 10-percent point and 550 degrees Fahrenheit at the 90-percent point, and kinematic viscosities between 1.4 and 2.2 centistokes at 100 degrees Fahrenheit.

2. **No. 2 Distillate.** A petroleum distillate which meets the specifications for No. 2 heating oil or fuel oil as defined in ASTM D 396 and/or the specifications for No. 2 diesel fuel as defined in ASTM Specification D 975.

a. **No. 2 Diesel Fuel.** A gas oil type distillate of lower volatility with distillation temperatures at the 90-percent point between 540 and 640 degrees Fahrenheit for use in high speed diesel engines generally operated under uniform speed and load conditions. Includes Type R-R diesel fuel used for railroad locomotive engines, and Type T-T for diesel-engine trucks. Properties are defined in ASTM Specification D 975.

(1) **No. 2 Diesel \leq .05% Sulfur.** The sulfur level does not exceed 0.05 percent by weight.

(2) **No. 2 Diesel $>$.05% Sulfur.** The sulfur level is above 0.05 percent by weight.

b. **No. 2 Fuel Oil.** A distillate fuel oil for use in atomizing type burners for domestic heating or for moderate capacity commercial- industrial burner units. ASTM Specification D 396 specifies for this grade distillation temperatures at the 90-percent point between 540 and 640 degrees Fahrenheit, and kinematic viscosities between 2.0 and 3.6 centistokes at 100 degrees Fahrenheit.

3. **No. 4 Fuel.** A fuel oil for commercial burner installations not equipped for preheating facilities. It is used extensively in industrial plants. This grade is a blend of distillate fuel oil and residual fuel oil stocks that conforms to ASTM Specification D 396 or Federal Specification VV-F-815C; its kinematic viscosity is between 5.8 and 26.4 centistokes at 100 degrees Fahrenheit. Also included is No. 4-D, a fuel oil for low- and medium-speed diesel engines that conforms to ASTM Specification D 975.

Kerosene. A petroleum distillate that boils at a temperature between 300 and 550 degrees Fahrenheit, that has a flash point higher than 100 degrees Fahrenheit by ASTM Method D 56, that has a gravity range from 40 to 46 degrees API, and that has a burning point

in the range of 150 degrees to 175 degrees Fahrenheit. Included are the two classifications recognized by ASTM Specification D 3699: No. 1-K and No. 2-K, and all grades of kerosene called range or stove oil which have properties similar to No. 1 fuel oil, but with a gravity of about 43 degrees API and a maximum end-point of 625 degrees Fahrenheit. Kerosene is used in space heaters, cook stoves, and water heaters and is suitable for use as an illuminant when burned in wick lamps. **NOTE:** Respondents to the EIA-821 survey were instructed to report all volumes in accordance with what the product was sold as, regardless of the actual specifications of that product. For example, if a No. 2 distillate was sold as a heating oil or fuel oil, the volume would be reported in the category "No. 2 Fuel Oil" even if the product conformed to the higher specifications of a diesel fuel.

PAD District. Petroleum Administration for Defense Districts

PAD District I:

Subdistrict IA. Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont

Subdistrict IB. Delaware, District of Columbia, Maryland, New Jersey, New York, and Pennsylvania

Subdistrict IC. Florida, Georgia, North Carolina, South Carolina, Virginia, and West Virginia

PAD District II:

Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Missouri, Nebraska, North Dakota, South Dakota, Ohio, Oklahoma, Tennessee, and Wisconsin

PAD District III:

Alabama, Arkansas, Louisiana, Mississippi, New Mexico, and Texas

PAD District IV:

Colorado, Idaho, Montana, Utah, and Wyoming

PAD District V:

Alaska, Arizona, California, Hawaii, Nevada, Oregon, and Washington

Residual Fuel Oils. The topped crude of refinery operations, which includes No. 5 and No. 6 fuel oils, as defined in ASTM Specification D 396 and Federal Specification, VV-F-815C; Navy Special fuel oil as

defined in Military Specification MIL-F-859E including Amendment 2 (NATO symbol F-77); and Bunker C fuel oil. Residual fuel oil is used for the production of electric power, space heating, vessel bunkering, and various industrial purposes.

United States. The 50 States and the District of Columbia.
