

## Grassland "Guests"

Dr. Jennifer Jumble studies animals that live in the North American grasslands. We asked her to send an e-mail to us with some interesting facts about her favorite grassland animals. She even sent pictures of some of them. Trouble is, she has predator e-mail - it gobbles up parts of animal names and spits them out in the wrong order! Can you unscramble the animals' names so that these sentences make sense? If you need help, look for the words in the box below.

bighorn buffaloes bobolink	chicken	•		grouse moose mouse	owls prairie pronghorn	snake weasel wolf
1. A black-footed eats one prairie every four or five days.						
2. Borrowing usually make their nests in prairie dog burrows.						
3. Grasslands are important places for endangered whooping to rest and eat on their migration trips across the U.S. renacs						
4. Swift are often killed by traps and poisons put out for  s o f e x						
5. There were once about 50 million running across the grasslands of North America. falobufes						
6. Some rare need the sweet nectar they get from grassland wildflowers.  f I u b e t r i t e s
