

**2007 SUMMARY REPORT
Commercial Feed Inspections**

**PLANT INDUSTRIES DIVISION
BUREAU OF FEED AND SEED**

Missouri Department of Agriculture
Mission Statement

To serve, promote, and protect the agricultural producers, processors,
and consumers of Missouri's food, fuel, and fiber products.

Bureau of Feed and Seed 2007 Feed Program Review

The Missouri Department of Agriculture, Plant Industries Division, Bureau of Feed and Seed is pleased to supply this 2007 Summary Report of Commercial Feed Inspections. It is hoped this summary will be used as a reference and will be of help in making improvements to your products.

Food safety issues continued to play a very important role in the Feed Program in 2007. To that end, Missouri Department of Agriculture, Bureau of Feed and Seed Inspectors have undergone training and become certified as Federal Department of Agriculture BSE Inspectors. These inspectors are charged with the task of providing inspection and surveillance for the BSE – Bovine Spongiform Encephalopathy (Mad Cow Disease) -Prevention Program. We continue our concentrated effort to ensure all facilities in Missouri that manufacture and/or distribute feed products containing prohibited mammalian protein were labeled as “Do Not Feed to Cattle or Other Ruminants”, in compliance with Federal Rule 21 CFR Part 589.

The Bureau of Feed and Seed, in cooperation with the Plant Pest Program and the USDA, obtained samples from Missouri’s 2007 wheat production that were tested for karnal bunt wheat disease. No evidence of karnal bunt was found in Missouri.

The Bureau of Feed and Seed conducted an annual survey of corn and milo produced in the state. Corn was tested for crude protein and aflatoxin and milo for crude protein. If a sample of corn was found to contain aflatoxin, the level and FDA guidelines for safe use or disposal were sent immediately to the facility where the sample of corn was obtained. The 2007 corn and milo results are reported in this summary.

In June 2002, the Bureau of Feed and Seed started GMP (Good Manufacturing Practices) inspections of non-federally licensed medicated feed manufacturing establishments. We continue to make this a vital part of our food safety initiative for all animal feed. It is essential that animal feed is safe to ensure the safety of food for human consumption. The program is intended to ensure legally approved levels and combinations of drugs and antibiotics are used in feed products and that the overall upkeep, housekeeping, records, labeling, and cleanliness of the facility are in order.

The Bureau of Feed and Seed maintained a 100 percent follow-up rate by immediately responding to customer complaints. When problems were suspected that were beyond the scope of the feed program or the capabilities of the Missouri Feed Control Laboratory, other agencies were contacted or the samples were sent to other laboratories for testing.

The Bureau of Feed and Seed took regulatory action against a number of unlicensed companies or those who failed to file tonnage reports. These actions are reported in “Violations Other Than Failure to Meet Label Claims”.

Food safety is a primary concern of the Bureau of Feed and Seed.

The Missouri Feed Control Laboratory reported results on 4,645 official samples in 2007. An official sample is a product or feed ingredient on which a guaranteed analysis is required. Should a product fail to meet a guarantee or something of a detrimental nature is found, a Withdrawal from Distribution Order is issued immediately. There were 534 withdrawals issued in 2007 which resulted in a statewide compliance rate of 88.50%.

The Missouri Feed Control Laboratory analyzed 37 customer-formula samples in 2007. No regulatory action is taken against these feeds, however, the customer requesting the feed and the manufacturer of the feed received a report of the analysis. In addition, the customer received a questionnaire to ensure the quality of feed requested was received.

A total of 521 service and complaint samples were analyzed in 2007. The total number of samples analyzed by the Missouri Feed Control Laboratory was 5,226, resulting in 52,145 individual assays in 2007.

The Excellence in Compliance Award Program was continued in 2007. A total of 136 guarantor companies qualified for this award.

The Bureau of Feed and Seed has met new challenges during 2007, including budget cuts and the continuous demand to do more with less. We are meeting these challenges and pledge to provide the best service we can with the resources that we have. Our goal has been, and will continue to be, to serve, promote, and protect our agricultural producers, processors and consumers of Missouri’s food, fuel, and fiber products.

U.S. Food and Drug Administration Guidelines for Aflatoxin Levels

Corn containing less than 20 parts per billion aflatoxin is considered safe by the U.S. Food and Drug Administration for use in all animal feed. Corn exceeding 20 ppb can be fed only for specific age, weight, and production stage. Corn exceeding 300 ppb must be blended with corn containing little or no aflatoxin before feeding is allowed to specific age, weight, and production stage of livestock. Before corn can be blended for out-of-state shipment, the U.S. Food and Drug Administration must be notified and permission obtained from the Missouri Department of Agriculture for this to be allowed.

U.S. Food and Drug Administration guidelines are as follows:

Aflatoxin Level (in parts per billion)	Commodities & Species
20 ppb	For corn, peanut products, cottonseed meal and other animal feeds and feed ingredients intended for dairy animals; for animal species or uses not specified below, or when the intended use is not known.
20 ppb	For corn, peanut products and other animal feeds and feed ingredients, but excluding cottonseed meal, intended for immature animals.
100 ppb	For corn and peanut products intended for breeding beef cattle, breeding swine or mature poultry (e.g. laying hens).
200 ppb	For corn and peanut products intended for finishing swine (100 pounds or more).
300 ppb	For cottonseed meal intended for beef cattle, swine or poultry (regardless of age or breeding status).
300 ppb	For corn and peanut products intended for finishing beef cattle (i.e., feedlot cattle).

2007 Corn and Milo Survey

The Missouri Department of Agriculture is happy again to report the results on our annual monitoring of aflatoxin in corn. This survey has been reported yearly since 1993. We also analyze all customer complaint samples for aflatoxin when symptoms suggest adulteration. Laboratory tests are conducted to determine the average crude protein in corn and milo. In 2007, the average crude protein for corn was lower at 7.62%. The crude protein value for milo was also lower with an average of 8.56% overall. Each sample was adjusted to a 13.5% moisture level.

Samples of corn are drawn from counties having an expected production of greater than one million bushels, with one sample added for each additional two million bushels produced. Aflatoxin was found in 29 of the 280 samples tested. The values reported were in a range from 10 -150 ppb. Each time aflatoxin was found, the facility where the sample was taken was notified immediately and FDA guidelines for safe use or proper disposal were supplied.

Twenty-seven (27) milo samples were collected from 24 counties. Since aflatoxin in milo has not been a concern in the past, analysis for aflatoxin was not performed.

The Missouri Department of Agriculture is committed to food safety and quality for the protection of our state’s consumers. Our mission is to continue to serve, promote, and protect the agriculture producers, processors and consumers of Missouri food, fuel and fiber products.

2007 STATISTICAL SUMMARY

Total Number of:

Commercial feed licenses issued	1,692
Small package pet and specialty pet food products	4,920
Unpaid products over the maximum fee per labeler	334
Formula feed sold (tons)	1,519,812
Feed ingredients sold (tons)	4,236,625
Feed inspections by inspectors*	1,288
Official labeled samples	4,645
Guaranteed claims tested and reported	24,395
Non-guaranteed claims tested and reported	3,159
Withdrawal from distribution orders issued	534
Custom mix samples	37
Nutrients tested and reported	227
Service and other samples	521
<u>Nutrients tested and reported</u>	<u>1,490</u>
TOTAL SAMPLES TESTED	5,226
TOTAL VALUES REPORTED	29,271
TOTAL TESTS PERFORMED	52,145

*A feed inspection is defined as one inspection for each facility visited where a “notice of inspection” is written indicating the type of regulatory action taken.

Excellence in Compliance Award

The Excellence in Compliance Award is designed to recognize those companies who have high standards and have met or exceeded a 90 percent rounded average compliance in 2007.

The Missouri Department of Agriculture will issue a certificate to honor those companies that have met or exceeded the following criteria:

- At least five random official regulatory samples must have been taken by a Missouri Feed and Seed inspector and been analyzed by the State Feed Control Laboratory in 2007.
- A 90 percent passing compliance rate on five or more samples must have been achieved for the 2007 calendar year.
- The company labeling the feed or feed ingredient must be in good standing with the Bureau of Feed and Seed retain a Missouri Commercial Feed License and have all quarterly inspection fees or yearly product listing (pet and specialty pet foods) paid as required.

A total of 136 feed labelers have achieved a 90 percent or better compliance rate in Missouri in 2007.

Ninety-seven of these companies maintain an address in the state of Missouri and 39 are located outside of Missouri. A number of companies with out-of-state addresses have manufacturing facilities in Missouri.

Congratulations go to the following companies in alphabetical order:

Percentage of Increase over the 14 year period in compliance to labeled guarantees for:					
Total regulatory sample numbers					11.44%
Average Annual Increase in Total Labeling Guarantees					0.82%
Total Percentage of Increase in Compliance to Protein Labeling Guarantees:					9.56%
Average Annual Increase in Compliance to Protein Labeling Guarantees:					0.68%

Feed Company Label Guarantee Compliance

SECTION 1

Section One is intended to show the reliability of labelers in meeting their claims for feed quality. Those inspections were planned on a random basis. The greater the number of samples taken per labeler, the greater the probability that the consistency in meeting claims shown will represent how well the labeler met guarantees.
