

Advance Summary

U.S. Crude Oil, Natural Gas, and Natural Gas Liquids Reserves

2005 Annual Report

September 2006

Energy Information Administration

Office of Oil and Gas
U.S. Department of Energy
Washington, DC 20585

This report was prepared by the Energy Information Administration, the independent statistical and analytical agency within the Department of Energy. The information contained herein should not be construed as advocating or reflecting any policy position of the Department of Energy or any other organization.

Released for printing September 26, 2006

Advance Summary: U.S. Crude Oil, Natural Gas, and Natural Gas Liquids Reserves 2005 Annual Report

Reserves additions replaced 164 percent of 2005 dry gas production as U.S. gas reserves increased for the seventh year in a row. Proved reserves of natural gas increased by 6 percent in 2005, the largest annual increase in natural gas proved reserves since 1970.

As of December 31, 2005 proved reserves were:		
Crude Oil (million barrels)		
2004	21,371	
2005	21,757	
Increase	+1.8%	
Dry Natural Gas (billion cubic feet)		
2004	192,513	
2005	204,385	
Increase	+6.2%	
Natural Gas Liquids (million barrels)		
2004	7,928	
2005	8,165	
Increase	+3.0%	

Reserves additions of crude oil replaced 122 percent of the 2005 production. Crude oil proved reserves increased for the first time in 3 years, up 2 percent from 2004.

Proved reserves are the estimated quantities which geological and engineering data demonstrate with reasonable certainty to be recoverable in future years from known reservoirs under existing economic and operating conditions. Petroleum engineering and geological judgment are required in estimating proved reserves; therefore the results are not precise measurements.

Natural Gas

Gas reserves additions onshore in the lower 48 States were large enough to overcome a 10 percent drop in gas reserves reported for the Gulf of Mexico Federal Offshore. The majority of natural gas reserves additions in 2005 resulted from extensions of existing

gas fields rather than new field or reservoir discoveries. Texas and Colorado led the nation in 2005 natural gas reserves additions with notable reserves increases in the Newark East Field (Barnett Shale, TX) and Ignacio-Blanco Field (tight sands and coalbeds, CO).

Total U.S. natural gas production declined 4 percent in 2005 because, in August and September of 2005, Hurricanes Katrina and Rita wreaked havoc along the Gulf Coast. Beyond devastating much of coastal Alabama, Louisiana, Mississippi, and the flooding of New Orleans, these storms destroyed 113 offshore platforms and seriously damaged offshore pipelines and coastal oil and natural gas processing facilities, impacting the Nation's oil and gas production. At its nadir, natural gas production in the Gulf of Mexico (which accounted for 20 percent of U.S. dry gas production in 2004) was cut by 80 percent. Gulf of Mexico production slowly returned and is expected to reach roughly 90 percent of 2005's pre-hurricane production rate in September 2006. For several years before Hurricane Katrina, gas production from the Gulf had been declining about 10 percent per year.

Total discoveries of dry natural gas reserves attributed to the drilling of exploratory wells, which include field extensions, new field discoveries, and new reservoir discoveries in old fields, were 23,200 billion cubic feet in 2005. This was 45 percent more than the prior 10-year average and 15 percent more than in 2004.

The majority of natural gas total discoveries in 2005 were from extensions to existing gas fields. Field extensions were 21,050 billion cubic feet, 16 percent more than in 2004 and 74 percent more than the prior 10-year average (12,101 billion cubic feet).

New field discoveries were 942 billion cubic feet, 24 percent more than the volume discovered in 2004 and 46 percent less than the prior 10-year average (1,731 billion cubic feet).

New reservoir discoveries in old fields were 1,208 billion cubic feet, up slightly from 2004 and 45 percent less than the prior 10-year average (2,198 billion cubic feet).

Natural gas net revisions and adjustments were 4,586 billion cubic feet, which is seven times the net revisions and adjustments of 2004, but 7 percent less than the prior 10-year average (4,908 billion cubic feet). The net of sales and acquisitions of dry natural gas proved reserves was 2,544 billion cubic feet.

Coalbed natural gas reserves increased 8 percent in 2005 and accounted for 10 percent of U.S. dry natural gas reserves. Coalbed natural gas production increased less than 1 percent from 2004 and accounted for 9 percent of U.S. dry natural gas production.

Other 2005 natural gas events of note:

- Natural gas prices at the wellhead rose 38 percent in 2005 to an average of \$7.51 per thousand cubic feet, as compared to \$5.46 per thousand cubic feet in 2004.
- Exploratory and developmental gas completions were up 27 percent from 2004.

Crude Oil

Reserves additions of crude oil replaced 122 percent of the 2005 production. Crude oil proved reserves increased for the first time in 3 years, increasing by 2 percent from 2004. Two of the four largest U.S. oil-producing areas, Texas and California, reported increases in proved crude oil reserves in 2005 while Alaska and the Gulf of Mexico Federal Offshore reported declines. Several significant deepwater discoveries that have been made in recent years in the Gulf are not yet booked as proved reserves. Texas reported the largest increase in crude oil reserves, a majority from the Permian Basin in west Texas. Wyoming and Montana had the second and third largest increases.

U.S. crude oil production declined in 2005 due to lower production in the Gulf of Mexico and Alaska. The Rocky Mountain States generally increased crude oil production in 2005 with the largest increase occurring in Montana (up 36 percent) from development of the Bakken formation of the Williston Basin.

Total discoveries of crude oil were 1,051 million barrels in 2005, 7 percent less than the prior 10-year average and 34 percent more than 2004's discoveries of 782 million barrels.

The majority of crude oil total discoveries in 2005 came from extensions to fields in Texas, California, Montana, and Wyoming.

New field discoveries accounted for 205 million barrels of crude oil reserves additions. Almost all of these discoveries (201 of 205 million) were in the Gulf of Mexico Federal Offshore. This was 6 times greater than the new field discoveries of 2004 and

only 49 percent of the prior 10-year average (419 million barrels).

Operators discovered 805 million barrels in extensions in 2005, 30 percent more than in 2004 and 53 percent more than the prior 10-year average (527 million barrels).

New reservoir discoveries in old fields were 41 million barrels, 69 percent less than 2004 and only 23 percent of the prior 10-year average (180 million barrels).

Reserves additions are the sum of total discoveries, revisions, adjustments, sales, and acquisitions. In 2005, reserve additions were 2,119 million barrels, 63 percent more than the volume of reserves additions in 2004 and 13 percent more than the prior 10-year average (1,875 million barrels).

Crude oil net revisions and adjustments were 790 million barrels, 60 percent more than the net revisions and adjustments of 2004 and almost equal to the prior 10-year average (795 million barrels). The net of sales and acquisitions of crude oil proved reserves was 278 million barrels.

Other 2005 crude oil events of note:

- The annual average domestic first purchase price for crude oil increased 37 percent from \$36.77 per barrel in 2004 to \$50.28 per barrel.
- Exploratory and developmental oil completions were up 25 percent from 2004.

Natural Gas Liquids

Natural gas liquids reserves are the sum of lease condensate reserves and natural gas plant liquids reserves. Natural gas liquids proved reserves increased 3 percent in 2005. Operators replaced 130 percent of U.S. natural gas liquids production with reserves additions.

Total proved reserves of liquid hydrocarbons (crude oil plus natural gas liquids) were 29,922 million barrels in 2005, a 2 percent increase from the 2004 level. Natural gas liquids represented 27 percent of total liquid hydrocarbon proved reserves in 2005.

Data

These estimates are based upon analysis of data from Form EIA-23, Annual Survey of Domestic Oil and Gas Reserves, filed by 1,394 operators of oil and gas wells, and Form EIA-64A, Annual Report of the Origin of Natural Gas Liquids Production, filed by operators of 508 active natural gas processing plants. The U.S. proved reserves estimates for crude oil and natural gas are associated with sampling errors of less than 1 percent.
