

Reverse engineering is not new by any means. How do you think GM gets ahead of Chrysler? The open market runs off of competition. If you can't see how things work, then how can you improve on them? Apple pirated the graphical user interface. They made profit from it. Some kid in Europe makes a dvd player, gives it away, and he's put in jail. Knowledge is power. The MPAA knows this. If they have all the knowledge, they have all the power. Last I checked monopolies are illegal. By having laws like this, you are GIVING AWAY A MONOPOLY.
