## 1. Introduction

As flood map projects progress through the data development phase of the flood study, the imagery and elevation data sets listed in Appendix B are captured in the study workflow and stored on FEMA's Mapping Information Platform (MIP). Appendix C of this report contains lists of elevation and imagery data that are available to registered users of the MIP through the Search & Retrieve interface. The Search & Retrieve interface provides the user with a map viewer for searching for DFIRM/Data Capture Standard (DCS) and non-DFIRM/DCS data based upon geographic extents, keyword searches, and by data submission type. A link to project metadata and downloadable data files is returned by the search results.

Registered MIP users may go to <http://hazards.fema.gov> and navigate to the Tools & Links page, and then choose Search & Retrieve Data to search for Map Mod project data. Note that users currently must log in to be able to utilize the Search & Retrieve functionality. The plan is for the metadata for all these data to be published on the Geospatial One Stop and for public access to the search and retrieve function.

The tables and maps described below are found in this Appendix in the order shown.

- Map Mod Elevation Data Sets Available On the MIP table list the counties where FEMA has collected and stored elevation project data on the MIP. These data sets are available to registered MIP users unless otherwise noted by record access constraints. (Sec. 2.1)
  - Map Mod Elevation Data Sets On the MIP map graphically reflect where the MIP contains elevation project data.
- Map Mod Imagery Data Sets Available On the MIP table list the counties where FEMA has collected and stored imagery (base map) project data on the MIP. These data sets are available to registered MIP users unless otherwise noted by record access constraints. (Sec. 2.2)
  - Map Mod Imagery Data Sets On the MIP map graphically reflect where the MIP contains imagery project data.

### 2. Elevation and Imagery Data Sets Available on the MIP

Since the Fall 2007 report was published, several studies have progressed through the data development phases for Basemap and Topographic data development tasks. The following tables represent imagery and elevation data sets that registered MIP users may download.
