⁽¹⁾ Births to unmarried women per 1,000 unmarried women aged 15-44 years.

NOTE: For most states, data on births to unmarried women are based on a direct question on the birth certificate or in the electronic birth registration process, asking if the mother is married. In 1999-2002, mother's marital status for two states was inferred from other information on the birth certificate. Rates for 1991-2001 have been revised and may differ from rates previously published.

⁽²⁾ Percent of all births to unmarried women.

^{2/} States provided adjusted birth data because the states changed their methodology or procedures for reporting the mother's marital status. Calculations for all other states were done on the basis of data files provided by each state to the National Center for Health Statistics (NCHS), which has tabulated the entire national birth file by mother's place of residence.

NOTE: A separate table is available from NCHS for the adjusted birth data for Connecticut. Prepared in the Division of Vital Statistics, NCHS, from published birth data and special tabulations provided by Conecticut.
