Swine Futures Project Is Online!

Point your Web browser to the URL above and surf the new Swine Futures Project (SFP) page on the Internet. Our Website contains an overview of SFP objectives and provides a way for you to tell us your views on health issues important to the U.S. pork industry. Our Website is relevant to any organization or individual who works in the industry and is interested in swine health.

What Is SFP?

SFP was created to protect and improve the health of the national swine herd, support production of high-quality pork, and promote access to international markets. The Project brings together representatives from the pork industry and the U.S. Department of Agriculture's (USDA) Animal and Plant Health Inspection Service (APHIS) in a collaborative effort to identify future industry health service needs and to determine how those needs should be addressed.

Important Survey Announcement

Attention: producers, swine practitioners, and government animal health officials. Please take a moment to share your opinions with us regarding future quality assurance, onfarm certification, and monitoring and surveillance priorities. Just visit our Website and follow the links to complete the simple "point-and-click" surveys on these important topics. Please help us to gauge which upcoming swine health issues should receive the greatest attention from industry and government. Thank you in advance for sharing your opinion with us!

If you do not have access to an Internet service provider and would like a copy of the survey or a brochure on the Swine Futures Project, contact
