Summary: On March 4, 2005, 70 Federal Register 10776, a new hazardous waste tracking system was established which becomes effective nationally on September 6, 2006. In addition to implementing a revised manifest form, this creates a new system for tracking waste rejected back to a generator or forwarded to an alternate facility. The designated facility rejecting or forwarding the waste must complete a new manifest for the subsequent shipment unless the full load is rejected while the transporter remains present at the facility. This fact sheet provides a table summarizing tracking requirements for the following scenarios:

- (1) Tracking waste forwarded to an alternate facility or rejected back to the generator using the original manifest.
- (2) Tracking waste to an alternate facility using a new manifest.
- (3) Tracking waste back the generator using a new manifest.
