PREFACE

The Water Resources Support Center's Navigation Data Center (NDC) is responsible for establishing and maintaining a variety of navigation-oriented databases. These include databases of waterborne commerce, domestic commercial vessels, port facilities, lock facilities, lock operations, and navigation dredging projects. The NDC's main office in Alexandria, Virginia, houses all but the waterborne commerce and vessels databases. These databases are operated and maintained by the NDC's Waterborne Commerce Statistics Center in New Orleans, Louisiana.

Information from the NDC databases is available to government agencies, private organizations and individuals. For those users from the Corps of Engineers and other federal agencies with direct access to the NDC databases, a supplemental guidebook, the *Federal Guide to Navigation Data*, is available upon request.

Data Center**

INTRODUCTION

This manual is designed to 1) acquaint the reader with the types of data available from the Navigation Data Center (NDC); 2) explain the various ways to access these data; and 3) provide some background on why these data are collected and how they apply to the Corps decision-making process.

This manual will assist both those who require immediate data access and those whose data needs are geared to long-term trend analyses. Operations personnel will find the data helpful in managing lock and dredging operations, while regulators can rely on current and archived port facility information and vessel activity. Managers and executives, when setting project maintenance priorities, will find the annual waterborne statistics a valuable source for commerce and vessel activity on Corps-maintained channels. Planners and policy makers preparing long-term investment programs will base their decisions on historical commerce, vessel, port, and lock activity, as well as port and terminal development. NDC data contain these current and historical facts.

Navigation Data

The NDC data collection and dissemination efforts encompass all the commercially navigable waterways of the United States. The NDC's data bank includes commodity tonnages, ton-mile statistics, number of passengers, specifics of vessel movements and lockages; descriptions relating to the various physical and operational characteristics of commercial port facilities, locks, vessels, and waterways; and performance data relating to the Corps' dredging projects. The sources of these data include monthly reporting from more than 1,500 vessel operating companies, lockage and dredging statistics from Corps' personnel at locks and district offices, and commercial port and terminal characteristics from on-site surveys conducted by NDC engineers. NDC is legally empowered to ensure that tonnage data are reported by vessel operating companies.

Navigation information from the NDC's data bank consists of the following data

Introduction

sets: the Waterborne Commerce Statistics and Vessel Characteristics, the Ports and Waterways Facilities, the Dredging Information System (DIS), the Lock Performance Monitoring System (LPMS), and Lock Characteristics. Navigation information is available in printed reports, thematic maps, CD-ROM, electronic data transfer, and special requests. Online computer access is available to the public through the NDC's Web Site and to Corps users through the LPMS and WCSC information systems.

NDC management activities include development of national navigation data base concept, design, implementation, operation, and maintenance. With accuracy and timeliness as priorities, NDC has integrated and standardized the data bases for increased operating efficiency, quality control, and enhanced user products.

Through relational data bases created and maintained in-house, NDC compiles customized reports as required. NDC regularly publishes the *Port Series Report* (56 volumes on a rotational basis); the *Waterborne Commerce Statistics* (reports compiled annually); the *Waterborne Transportation Lines of the United States* (compiled annually); the *Key Lock Report* (compiled monthly); the *Summary of Lock Statistics* (compiled annually); and the *Corps of Engineers Dredging Program: Advertising Schedule and Contracts Awarded* (compiled monthly).

Proprietary Constraints

Certain tonnage data collected by NDC are considered to be proprietary and therefore are not available to the general public. This restriction protects reporting companies from unfair competitive advantage. All Corps and Federal users must comply with the Trade Secrets Act (Title 18, U.S. Code Chapter 93, Section 1905), which states in part "Whoever...discloses...information which concerns...operations...(or) confidential statistical data...of any person, firm, corporation or association...shall be fined not more than \$1,000 or imprisoned not more than one year or both, and shall be removed from office or employment." Any Corps of Engineers employee, or other Federal agency employee who receives confidential data from NDC, is subject to this restriction. Confidentiality is governed by the "Rule of Three", which states that there must be at least three vessel operating companies moving a particular commodity from an area of origin to an area of destination for those data to be released publicly. When there is a question as to the proprietary constraint on, or confidentiality of, any data provided, contact David Penick, Director, WCSC at (504) 862-1423, E-mail: david.penick@usace.army.mil or David Lichy, Program Manager, LPMS at (703) 428-9052, E-mail:david.lichy@usace.army.mil.

General Information

The NDC executive office produces a variety of informative publications.

The *Navigation Data Center* brochure provides an overview of NDC products and capabilities.

A pamphlet, *Products and Services Available*, provides a listing of all NDC publications.

The *Waterborne Commerce Statistics Center* brochure provides a brief description of the purpose, legal authority, types of data, policy, and products of the WCSC.

The *U.S. Army Corps of Engineers, Navigation Data Center Waterborne Commerce Statistics Center, 33 CFR Part 207, Navigation Regulations* is a copy of the regulation as it appears in the Federal Register.

INTEGRATED NAVIGATION INFORMATION

Integrated Navigation Information is the result of combining data from any of the NDC information systems on the basis of a common geographic location. This location could be a particular point on a waterway, the entire Nation, a stretch of river, a State, a congressional district, one of the Corps Divisions or Districts, or any other geographic location related to navigation. Using the latest technology, NDC offers many ways to access these integrated data, including the Executive Work Station (EWS), the NDC Web site on the Internet, and Geographic Information System (GIS) applications.

Executive Work Station. The EWS is NDC's information server. It consists of a relational data base of summarized data from each of NDC's information systems. Data are organized geographically and summarized at the lowest level by location such as a dredging contract site, lock chamber, or port facility.

NDC personnel access the EWS to provide executive decision support, in-house quality control, high-volume data transfers, data base maintenance, and answers to customer requests. NDC uses data from the EWS for quality control to check cargo movements by comparing port facility with WCSC information to detect which port facilities are actively shipping/receiving cargo. Data from the EWS are the primary source for the NDC GIS. Lock Characteristics and Lock Performance information is exported from the EWS and are used in publishing the *Lock Performance Monitoring System Summary*

Integrated Navigation Information

of Lock Statistics Report. Many customers use integrated data from the EWS to gain a wider perspective of the total navigation system.

The types of data on the EWS and frequency of updates are described below:

- **Waterborne commerce data.** Summary of tons and ton-miles from the WCSC by commodity at each Corps-owned and operated lock site. These data are updated annually.
- **Port facility data.** Subset of the PWD data base containing physical and intermodal (infrastructure) characteristics of U.S. ports. Ports information is updated periodically as port surveys are completed.
- **Dredging statistics data.** Subset of the DIS containing information about all awarded dredging contracts for each complete fiscal year back to 1990. Data are added at the end of each fiscal year.
- **Lock performance and usage data.** By direction (upstream or downstream) at each Corps-owned and/or Corps-operated lock chamber, a summary of number of vessels, barges, lockages, and hardware operations; delay time, processing time, and lock unavailability time; and tonnages and number of barges by commodity. Data are summarized annually back ten years and monthly for the 3 most current years. New monthly summaries are added approximately 45 days after the end of each month.
- **Lock characteristics data.** Location, physical characteristics, site information, site characteristics, historical change and Corps management information. Data are updated on the basis of a survey by NDC engineers or notification from Districts.

Data are available from the EWS in most standard file formats (e.g., ASCII comma delimited) and in customized reports, spreadsheets, charts, or graphs. For further information about obtaining data from the EWS, contact Bob Baldwin at (703) 428-8047, E-mail: robert.baldwin@usace.army.mil.

Internet Web Site. NDC's Web Site is the information server for navigation data, monthly summary statistics, internal tonnage estimates and indicators and new navigation data products. The internet address is <http://www.wrsc.usace.army.mil/ndc> See Below for more information.

(this section is being updated)

Geographic Information System Applications. A geographic information system (GIS) at NDC uses data from the EWS and specific NDC data sources to build an integrated navigation application. This GIS can produce thematic maps that display the integrated information based on the user's selection of geographic data layers.

NDC has incorporated latitude/longitude information into its central data base to facilitate more precise plotting of specific geographic points on the waterways. Locations can be depicted as points (e.g. a dock), as lines (e.g. a road or waterway), as areas (e.g. entire states), or as networks and combinations of the above. When translated into the current NDC information systems, LPMS, Lock Characteristics, Port and Waterway Facilities, and Dredging data can be represented as specific points; WCSC's State and waterway information as map displays; its waterway data as line depictions; and its locks as points. For more information about GIS applications contact Michael Myers at (703) 428-8063, E-mail: michael.myers@usace.army.mil.

Internet - World Wide Web Home Page. NDC's Home Page is available to all World Wide Web users on the Internet at <http://www.wrsc.usace.army.mil/ndc>. Visitors to NDC's Home Page will be able to access the most current navigation information about waterborne commerce, dredging contracts, port facilities, lock characteristics, and lock performance. Links to other related sites are also available.

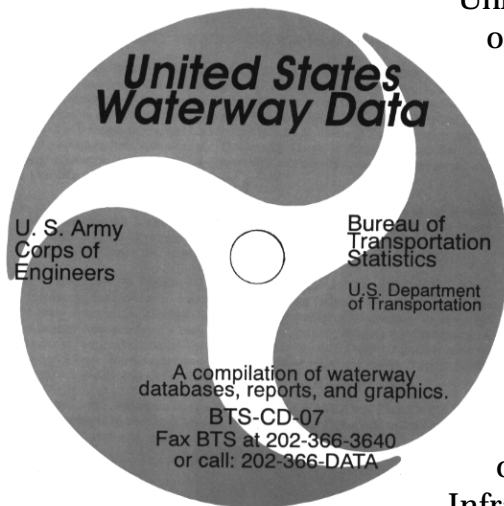

Integrated Navigation Information

Integrated Products.

The U.S. Waterway System--Facts pamphlet is an annually updated pocket-sized guide to salient facts about the U.S. waterway system. Included is traffic by state, leading U.S. Ports, traffic by commodity, traffic by waterway, U.S. flag vessels and U.S. waterway facilities.

The *United States Waterway Data CD-ROM* is a collection of data from several agencies and institutions, including USACE's NDC, the U.S. Bureau of Census, the U.S. Coast Guard, Oak Ridge National Laboratory and Vanderbilt University. The U.S. Waterway Data CD-ROM is the result

of a coordinated effort between the U.S. Department of Transportation Bureau of Transportation Statistics (BTS), USACE and other contributing agencies, to make waterway data more easily accessible to the public and to user agencies. The U.S. Waterway Data CD-ROM was funded and distributed by BTS. CD-ROM development was a joint effort by the USACE NDC and the Vanderbilt Engineering Center for Transportation Operations and Research (VECTOR). BTS and USACE had several objectives in developing a Waterway Data CD-ROM. The objectives support the concept of a National Spatial Data

Infrastructure (NSDI), which would provide current and reliable data, foster partnerships between data producers and

users, and establish standards for sharing data. These data include by agency:

USACE NDC -

- Waterborne Commerce - State Summary of Commodity Movements; Major U.S. Ports Summary; Principal Ports geographic location and commodity tonnage; Manuscript Cargo Files Parts 1-4; Manuscript Files Summaries: summary of all cargo moves and loaded barge movements; Commodity Code Cross Reference; Public Domain Commodity File; Waterway and Port Codes and Names; State to

State Public Domain Database; Waterway Network Link Commodity Data; Operator Master Vessel File; Vessel Master File.

- Port and Waterways Facilities - Complete port series data base for most recent survey.
- Dredging Statistics Program - Dredging contract data for last 3 Fiscal Years.
- Lock Performance Monitoring System - Vessel and Lockage data summarized monthly for the most recent 5 years.
- Lock Characteristics - Complete data base consisting of physical aspects of each lock chamber built, maintained owned or operated by the USACE.
- Waterway Mile Markers - Contains 10,020 sequential mile positions of navigable inland waterways and the Gulf Intracoastal Waterway.

U.S. Bureau of the Census -

- Cargo Exports
- Cargo Imports
- Vessel Clearance
- Vessel Entrances

U.S. Coast Guard Files -

- Foreign Flag Vessel File
- Fire and Explosions on Vessels
- Allisions, Collisions and Vessel Roundings
- Pollution Incidents from Vessels
- Personal Casualties and Deaths on Vessels
- Fires and Explosions at Facilities
- Allisions, Collisions at Facilities
- Pollution Incidents from Facilities
- Personal Casualties and Deaths at Facilities

Multi-Agency Files -

- National Waterway Network (NWN) - A geographic database of navigable waterways in and around the U.S., for analytical studies of waterway performance, for compiling commodity flow statistics, and for mapping purposes.

Miscellaneous Files -

- BMP Files - Bitmap (BMP) image files created by USACE NDC containing maps of various examples from the spatial databases on the CDROM. To obtain the *U.S. Waterway Data CD-ROM* contact BTS at (202) 366-DATA or NDC at (703) 428-9061.

NDC DATA BASES

Waterborne Commerce Statistics Center

Background. WCSC, located in New Orleans, primarily collects, processes, distributes, and archives waterborne vessel trip and cargo data. USACE has been systematically collecting information on vessels, tonnage, commodity, origin, and destination from vessel operating companies since 1922. The data are collected under the River and Harbor Act, September 22, 1922 (42 Stat; 1043), as amended, and codified in 33 U.S.C. 555. This statute imposes a \$2,500 civil penalty per violation against any person or entity that fails to provide timely, accurate statistics. Each criminal offense includes a possible 2 months' imprisonment or a \$5,000 fine per offense. The Corps can also refuse to permit lockage of vessels from delinquent reporting vessel operating companies.

Commercial carriers that transport goods and passengers on the navigable waterways of the United States supply the data to WCSC. The Bureau of Census processes foreign data collected by the U.S. Customs Service at the request of the Corps of Engineers and provides the Corps with foreign statistics for the waterways and harbors of the United States. The foreign data are summarized and combined with the domestic data so that the WCSC data base and products reflect the total waterborne traffic picture: foreign and domestic, inland waterways, and coastal and Great Lake ports and channels. WCSC also collects shipper information to support the U.S. Customs Service in collecting harbor maintenance fees (P.L. 99-662).

Types of Data Collected. The data collected by WCSC can be grouped into three general categories: domestic data, foreign data, and vessel data. Each category is described in detail below.

Domestic Data. Domestic commerce is defined as commerce originating and terminating on waters of the contiguous and non-contiguous States and territories. This definition includes Hawaii, Alaska, the 48 contiguous States, Puerto Rico and the Virgin Islands. (See Appendix 1, Terminology, for a description of the domestic types of traffic.) Most domestic waterborne commercial vessel movements, including ships, towboats, offshore supply vessels, barges, passenger (excursion and ferry) boats and newly constructed vessels, must be reported to the Corps. Excluded are movements of

recreational vessels, fire/police/patrol vessels, dredges, and construction vessels (pile drivers, crane barges, etc.). The forms by which carriers report are ENG Forms 3925 and 3925B, Vessel Operation Report (VOR). (See Appendix 3, Reporting Forms, for a sample copy of the VOR.) Specific types of data collected include vessel name, vessel type, commodity carried, tonnage, origin (port, dock, date departed, draft), destination (port, dock, date arrived, draft), alternate routes, and shipper name and IRS number. These data are encoded into numeric form and loaded into the current year Oracle Detail table, and are supported by descriptive fields in the Master tables, which are included in the Data Dictionary. (Corps and other Government users should refer to the supplement: *Federal Guide to Navigation Data*, TOWS Data Dictionary.)

Data flows from the source (carrier), through WCSC's contract coding and keying facilities, to the editing and the routing process, which identifies all waterways traversed by the vessel and commodity movement from origin to destination. Routing computes trip miles and ton-miles, and determines the traffic type (See Appendix 1, Terminology).

Beginning with the 1990 data year, WCSC reduced its publication commodity categories slightly from 163 to 157, while increasing its data capture categories from 163 to 662. This change affords a better disaggregation of the old not-elsewhere-classified (NEC) categories, and provides more specific commodity codes. The detail commodity categories are Standard Industrial Trade Classification, Revision 3 codes (SITC, Rev 3), which are compatible with the International Harmonized System codes used in foreign trade. The publication codes are hierarchically compatible with LPMS commodity codes. (See Appendix 2, Commodity Code Tables, Commodity Classification List and Commodity Mapping Table, for the SITC, Rev 3 codes mapped to the LPMS and Publication commodity codes.)

Foreign Data. Foreign commerce is defined as commerce that is a waterborne import, export, or transshipment traffic between the United States (including Puerto Rico and the Virgin Islands) and any foreign country. These statistics do not include traffic between Guam, Wake Island, or American Samoa and any other foreign country. (See Appendix 1, Terminology, for a description of the foreign types of traffic.)

The Foreign Trade Division of the Bureau of Census compiles and disseminates the data related to imports and exports of the United States by collecting and processing the documents channeled to the Bureau of Census by the U.S. Customs Service. Foreign commerce data are furnished to the Corps of Engineers by the Bureau

of Census under a working arrangement sponsored by the Office of Management and Budget. The data are confined to vessel movements by water and are reconcilable with published trade reports of the Bureau of Census with the exception of LOOP Oil Terminal and Skagway Wharf reports, which are manually entered as imports by the Corps of Engineers.

WCSC is the Corps repository for import/export detail data collected by the Bureau of Census. The foreign detail data are stored on computer tape and summarized, merged, and routed with the domestic detail data. Only summary data are available in the Oracle Detail table, including commodity carried, tonnage, U.S. port, vessel type, direction, and number of trips. Specific types of data in the foreign detail records include U.S. district/port, foreign port, country of origin/destination, SITC Rev 3 commodity, shipping value and weight, vessel name, WCSC location code, draft, net registered tonnage, ballast, rig, and operator. For Corps users only, the foreign detail cargo records for the current processing year are available in an Oracle table. (Refer to the supplement: *Federal Guide to Navigation Data*, Foreign Data, for the Oracle table descriptions.)

Vessel data. WCSC annually conducts a survey (ENG Form 3931) of the companies with vessels available for commercial waterborne carriage of passenger and cargo such as ships, towboats, and barges available for use in such carriage. The U.S. flag fleet and company information is entered into WCSC's data base, and provides an annual "snapshot" of the domestic commercial fleet by company. The vessel inventory does not contain general ferries, floating equipment used in construction work, most dredges, most fishing vessels, or recreational craft. Specific types of operator and vessel data collected include operator address, type of service, and principal commodities carried and localities served, as well as vessel name and number, Coast Guard number, vessel characteristics, and operating base. These data are available to the public, See Appendix 4, WTLUS for field descriptions. (Corps and other Government users should also refer to the supplement: *Federal Guide to Navigation Data*, TOWS Data Dictionary, Master Operator and Master Vessel tables, for file layout and descriptions.)

Accessing.

Online. See "Internet Web Site" for online access of waterborne statistics available to the public. Corps users must contact the ADP office of WCSC at (504) 862-1406 for online access of detail data.

Electronic Media.

- Data in parts 1-4 of the *Waterborne Commerce of the U.S.* (see "Publications") are available on diskettes (in numerical codes) for calendar years back to 1982 and on CD-ROM as part of the *U.S. Waterway Data CD-ROM* (see "Integrated Products"). See Appendix 5, WCUS Manuscript Data File, for field descriptions and file layout. (Corps and other Government users should also refer to the supplement: *Federal Guide to Navigation Data*, TOWS Data Dictionary, WCUS Manuscript tables, for file layout and descriptions.)
- Data in the public domain data base (see "Publications") are available on diskettes (in numerical codes and State abbreviations) back to calendar year 1985 and on CD-ROM as part of the *U.S. Waterway Data CD-ROM* (see "Integrated Products"). See Appendix 6, WCSC Public Domain Data Base, for field descriptions, file layout, commodity groupings, State abbreviations, and region definitions.
- Foreign detail data are available on computer tape or diskettes (in numerical codes) for calendar years back to 1985 for Corps users only. (Corps users should refer to the supplement: *Federal Guide to Navigation Data*, Foreign Data, for file layout and descriptions.) Other Government users must request these data from the Bureau of the Census, Foreign Trade Division at (301) 457-2317.
- Detail data from the *Waterborne Transportation Lines of the United States* (WTLUS), see "Publications", are available on computer tape or diskettes and on CD-ROM as part of the *U.S. Waterway Data CD-ROM* (see "Integrated Products"). See Appendix 4, WTLUS for field descriptions and file layouts.

Publications. (see Appendix 7, Sample Reports)

- *Waterborne Commerce of the U.S.* (Parts 1-5) is a series of publications that contain statistics on the commercial waterborne movements of domestic and foreign cargo. Part 1 covers the Atlantic Coast; part 2 -- Gulf Coast, Mississippi River System, and the Antilles; part 3 -- the Great Lakes; and, part 4 -- the Pacific Coast, Alaska, and Hawaii. Section 1 of parts 1-4 present summary data by commodity, traffic (in short tons), and harbors and waterways within Corps Districts. Section 2 of parts 1-4 contains the trips and drafts of vessels (by harbors and waterways). Part 5 details

national summaries of tons and ton-miles contained in parts 1-4. Archival copies are available back to 1915.

- *Estimated Waterborne Commerce Statistics, National Totals and Selected Inland Waterways* contains tonnage estimates of the total national waterborne commerce and selected inland waterways for the most recent calendar year. The waterways estimates are based on correlations between LPMS, described in this section, tonnages collected at the locks, and waterborne commerce tonnages provided by vessel operating companies. These data sets are available approximately 3-6 months after the close of the calendar year.
- *Internal U.S. Waterway Monthly Tonnage Indicator* is the current monthly internal waterborne tonnage indicator with a comparison to previous years. Internal tonnage moves solely within the boundaries of the United States. The indicator is based upon tonnage passing through key locks on the inland waterway system. These locks were chosen using correlation analysis of twelve years of historical waterborne commerce data collected from vessel operating companies and data collected at Corps operated locks. The indicator is computed as soon as the necessary monthly lock data is available, which is 30 to 45 days after the close of the month.
- *Tonnage for Selected United States Ports* contains tonnage figures for the top 150 U.S. ports for a given year. Listings are sorted by total tonnage, foreign tonnage, domestic tonnage, and alphabetically. Historical copies are available back to 1986.
- *Waterborne Tonnage by State* contains waterborne tonnage by States, for a given year, in single-page format. Data are aggregated by domestic and foreign shipments, domestic and foreign receipts, and intra-state. The listings are sorted by total waterborne tonnage, and alphabetically by State. Historical copies are available back to 1988.
- Two public domain data bases contain aggregated information that depicts waterborne commodity movements between 26 geographical regions and individual States of the U. S. These data bases protect the confidentiality of the data provided by the individual carriers, while simultaneously providing the general public with origin/destination commodity flows. Commodity specificity may be generalized to protect confidentiality during the editing process. For example, sugar is labeled as food. If three or more vessel operating companies do not carry food products from a particular area of origin to a particular area of destination, then "food" is reclassified to "other." Editing procedures are

continually undertaken to ensure carrier confidentiality. These data are available in hard copy beginning with calendar year 1985.

Approximately 1,400 records are in each calendar year data base. They are sorted by origin, destination, and commodity.

- *Waterborne Transportation Lines of the United States* contains information on the vessel operators and their American flag vessels operating or available for transporting freight and passengers. Table 1 alphabetically lists the vessel companies and their addresses; table 2 alphabetically lists the vessel companies and describes each vessel, including its Coast Guard number, net register tonnage, vessel type, construction and characteristics, length, breadth, draft, horsepower, carrying capacity, highest fixed point, cargo handling equipment, vessel operating base, and year built or rebuilt. Table 3 lists descriptions of operations by vessel company, to include type of service, principal commodities carried, and points or localities and waterways between which or on which the services are conducted. Before 1983, the WTLUS consisted of three regional volumes; in 1983-84, these volumes were consolidated into a single edition.

The 1994 WTLUS edition will be printed in three volumes. The National Summaries, Volume 1, provides a condensation of the vessel data detailed in the WTLUS. Summarized vessel characteristics are represented in both tabular and graphic format.

The Transportation Lines Company Summary, Volume 2, provides a summary of the vessel companies detailed in the WTLUS. Volume 2 combines the information provided in Tables 1 and 3 from the old format (described in the previous paragraph) into one summary table. The number of vessels reported by vessel type has been added to the table for each company.

The Vessel Characteristics, Volume 3, lists the vessel companies detailed in the WTLUS in alphabetical sequence and describes each vessel surveyed by the same characteristics as listed in Table 2 of the old format (described in the previous paragraph).

- *Summary of U.S. Flag Vessels* summarizes the vessel types by region contained in the WTLUS. The summary by region represents the same geographic regions that were published before 1983-84 in three publications. The data for each vessel type (by year and region) include number of vessels, passengers, railroad cars, horsepower, and cargo capacity. Vessel types are disaggregated by dry cargo and/or passenger, dry cargo barges, ferries and railroad cars, tank barges, tankers, railroad car floats, and

towboats. Historical copies of these summaries are available back to 1949.

Special Requests. Special data runs should be requested by formal letter to
Mr. Thomas Mire
Quality Control, Products and Services Office
Waterborne Commerce Statistics Center
U.S. Army Corps of Engineers
P.O. Box 61280
New Orleans, LA 70161-1280
(504) 862-1424

These requests would normally be characterized by a need for data not contained in the standard products above. Requestors should specify the type of files and formats required. WCSC will respond with a cost and time estimate. The requesting office must send a check or money order, or Government transfer of funds to WCSC before the requested data can be generated and sent. The check or money order should be made payable to FAO, USAED, New Orleans (see Appendix 8, Ordering Guide). Frequent users can set up an account at WCSC. As a reminder, data that reveals the activity of individual reporting carriers cannot be released to the public. Such data are confidential under the Trade Secrets Act (18 USC 1905).

Ports and Waterways Division

Background. The PWD receives its charter and authority from three statutes. Section 7 of the River and Harbor Act of 1918 directs the Chief of Engineers to report on the description and adequacy of U.S. waterway terminals and transfer facilities in his annual report to Congress; section 8 of the Merchant

Marine Act of 1920 adds a requirement to study the infrastructure supporting such port facilities; and section 500 of the Transportation Act of 1920 reiterates these responsibilities, requires the publication of collected data "of value to the commercial interests of the country," and adds the anchorages of the Great Lakes to the areas of investigation.

Types of Data Collected. The PWD collects, reviews, analyzes, publishes, and disseminates data on the physical and intermodal (infrastructure) characteristics of the coastal, Great Lakes, and inland ports of the United States. Also published are dock location data for NDC's GIS and port area maps for use with collection of harbor maintenance fees. Fifty-six *Port Series Reports* cover more than 9,500 facilities in more than 200 ports areas. The PWD also provides compatible data to LPMS, and current data for WCSC's location and dock code data base. Users of PWD data include, at the District level, regulatory functions, port mobilization planners, project planners, reservoir regulators, and emergency management officials.

Port facilities. Facility data include, but are not limited to location (latitude/longitude, NDC codes, mile, and bank); operations (name, owner, operator, purpose, handling equipment, rates, and details of open and covered storage facilities); type and dimension of construction (length of berth space for vessels and/or barges, depth, apron width, deck elevation, and details of rail and highway access); and utilities available (water, electricity, and fire protection).

Mile point locations. The Mile Point locations data base contains 10,020 sequential mile point positions of navigable inland waterways and the Gulf Intracoastal Waterway. Each record includes: longitude, latitude, river name, river code, river number, and ID number. Creation of the Mile Point locations data base was a joint effort of NDC and the Defense Mapping Agency. Latitudes and longitudes are expressed in explicit decimal seconds. For further information about the Mile Point

Locations data base contact Bob Baldwin at (703) 428-8047, E-mail:robert.l.baldwin@usace.army.mil.

Accessing.

Online. Currently, the PWD data are not available for online computer access. A list of all PWD publications and a pricing guide can be found on the Internet.

Electronic Media. Data files can be supplied in ASCII or other standard data base formats upon request. Contact Bob Ray at (703) 428-8058, E-mail:robert.e.ray@usace.army.mil.

Publications.

- *Ports Series Reports.* These reports contain detailed information as outlined above, as well as extensive descriptive material including project authorization, bridge/tunnel/railroad infrastructure data, meteorological information, and anchorage descriptions. The reports cover the nation's principal coastal, Great Lakes, and inland waterway terminals and transfer facilities. All viable commodity handling and maritime service wharves are included, as are aerial maps and photos of individual facilities. Each of the 56 reports in the series is updated periodically (approximately every 10 years). All *Port Series Reports* include detailed maps depicting facility locations. For a complete listing of the 56-volume *Port Series Reports*, the latest date of publication, and price, see Appendix 8, Ordering Guide. *Port Series Reports* may be purchased by addressing orders to:

Port Series Reports
CEWRC-NDC-P
7701 Telegraph Road, Casey Building
Alexandria, VA 22315-3868
(703) 428-8059

- *Summary of Commodity Handling Terminals in the United States.* This report summarizes facilities available along selected inland waterways for five commodity types, including petroleum, liquid bulk, materials other than petroleum, grain, coal, and dry bulk materials other than coal. The data presented are taken from the *Port Series Reports*.

- Harbor Maintenance Fee Maps. The engineers of the PWD were called on to create harbor area maps for the U.S. Customs Service to use in determining various limits for harbor maintenance fee collection.
- Port Facility Data Base -- The Master Port Directory has been created to select and process specific data relating to elements in approximately 150 fields for any or all of the Nation's coasts and/or inland waterway. Examples of special reports are *Summary of Facilities Within Area of 1993 Midwestern Flood*; *United States Container Handling Facilities*; *Timber Transfer Facilities on Pacific Coast*; *Coal Burning Power Plants With Barge Receiving Equipment*; *Mississippi River Grain Handling Facilities Without Rail Connections*; and *Coal Handling Docks of the United States*.

Special Requests. Special requests may be directed to Virginia Pankow, Chief, Ports and Waterways Division, (703) 428-9047, E-mail:virginia.r.pankow@usace.army.mil. Written requests should be directed to *Ports and Waterways Division*, CEWRC-NDC, 7701 Telegraph Road, Casey Bldg., Alexandria VA 22315-3868.

Dredging Statistics Program

Background. The Dredging Statistics Program contains the Dredging Information System (DIS) data base, which gathers, manages, and distributes data on all contracted and Corps-performed dredging activities. The Dredging Statistics Program was established in 1991 as mandated by the Director of Civil Works. The DIS data base was developed, building on the strengths of its predecessor, the National Dredging Data Management System (NADDAMS), incorporating the speed and flexibility of current data base management system technology. The data base tracks all contracted and Corps-performed dredging from pre-bid through completion. Commercial relational data base management system software, MICRORIM R:BASE, is used with customized applications for Corps of Engineers data entry. Data are stored in 17 major tables that contain over 150 data fields. The current central data base contains information from 1984 to the present.

Types of Data Collected. The data base tracks each dredging contract, and information relating to an individual contract is linked among the tables. Information in the data base includes general contract data on name and location of the dredging site, dredged quantity, type of dredge, type of material disposal, dates of bid advertisement, bid opening and contract award, units of contract measurement, small business set-aside restrictions, dredging window restrictions, Government cost estimate, number of bids submitted, winning bid and bidder, small business status of bidders, and actual contract cost and quantity dredged. The data base also contains more detailed data of the cost and quantity of all bid items including the Government estimate. Disposal site and quantity data are captured and a table is dedicated to all contractor names and addresses.

The Corps of Engineers Districts are responsible for maintaining and updating their "local" district data bases and supplying an updated file monthly to the central data base. The files are imported into the national data base where data integrity and quality control checks are performed.

Accessing. Direct access to the data base is limited to the Program Manager and district data entry personnel. However, all data are available in electronic form or hard copy through requests to the Program Manager.

The DIS is a stand-alone PC-based central data base with a distributed application in each district. Each district has direct access to its own data base and a copy of the national data base to view as needed. The central data base is directly accessible by the Program Manager, who addresses all data and information requests. Direct hands-on access to the data base is not available to the general public, although data files can be obtained for further manipulation and analyses.

Online. The DIS is currently not an interactive online system. Data files from the districts are imported into the central data base.

Electronic Media. The public can access NDC's Web Site for current reports, updated monthly by the 15th, of the Corps Contract Dredging Schedule, as well as the current list of contracts awarded. The complete listing of the previous year's contracts and awards is also available. Contracts and awards from FY 1992-on are archived on NDC's Web Site and available to users.

Data files can also be supplied in ASCII or other standard data base formats. (Corps and other Government users should refer to the supplement: *Federal Guide to Navigation Data*, DIS, for field descriptions, record layout, and file specifications.)

Publications. Standard reports and custom products of the Dredging Statistics Program include contract advertising schedules, lists of contracts awarded, post-bid summaries, small business summaries, and statistics and reports sorted and summarized by specific data fields. The following are two frequently used monthly reports.

- *U.S. Army Corps of Engineers Contract Dredging Program: Advertising Schedule* includes selected information and the status of all current fiscal year Corps dredging contracts. Information on the dredging location (Corps district and site), contract status (active, hold, etc.), quantity, proposed contract advertising and bid opening dates, suggested type of dredge, type of disposal, class of work (maintenance or new work), dollar range of contract value, and small business set-aside restrictions are included in this report. A legend of codes used in the report is included. As the year progresses, contracts that have had bid opening or were awarded are tagged so readers know their status.
- *US Army Corps of Engineers Contract Dredging Program: Contracts Awarded* includes information on current fiscal year contracts awarded and lists the dredging location, contract advertising and bid opening dates, quantity, dredge type bid, Government estimate, winning bid and bidder, business

status (emerging, small, or large) of the winning bidder, and the number of bids submitted for the contract.

Special Requests. Special requests and inquiries may be made to Virginia Pankow, Manager, Dredging Statistics Program (703) 428-9047, E-mail: virginia.r.pankow@usace.army.mil. Written requests should be directed to *Dredging Statistics Program*, CEWRC-NDC, 7701 Telegraph Road, Casey Bldg., Alexandria, VA 22315-3868

Lock Performance Monitoring System

Background. LPMS collects, edits, maintains, analyzes and disseminates data collected at all Corps-owned and/or Corps-operated locks. LPMS data are collected under authority of Engineering Regulation 1130-2-429. Data collection began in 1975 and consists of information about waterway traffic usage and performance of each lock in the Corps' national system. Cargo and passenger statistical data are obtained under the authority of 33 USC 555, and thus is subject to the proprietary constraints. Data should not be released if they identify any vessel owner who provided such confidential information.

Types of Data Collected. LPMS data consists of information describing the waterway traffic through Corps owned and/or operated locks. These data include the number of vessels and barges using the lock; type, dates, and times of lockages; entry and exit types; number of cuts; flotilla dimensions; vessel ID number; direction; lock closure dates and times, durations, causes and whether closure was scheduled; barge type, barge size, commodity type; and tonnages carried. Data are collected using printed forms or a PC data entry and edit software program (LPMS Micro Edit). Both data collection methods are based on the Waterway Traffic Report Forms: ENG Form 3102b - Lockage Log, 3102c - Vessel Log, and 3102d - Detailed Vessel Log used as an alternate to 3102c when specific barge information is needed (see Appendix 3, Reporting Forms, LPMS Waterway Traffic Report forms). LPMS data are electronically transmitted monthly from each lock or Corps District office to a central data base. Information collected from each of the locks is kept active in the central data base for the most recent 10 years. Statistics are published by NDC each month for selected key locks, and annually for all locks.

Accessing.

Online. Online access to the LPMS central data base is available to any authorized Corps user. An authorized user may access the detailed lockage data, monthly summary data and any of the 16 standard LPMS reports (see "Publications"). Data are added to the LPMS data base each month and kept active for the last 10 years. Upon special request, archived data can be obtained back to 1980. Corps personnel must coordinate with their district Information Management Office (IMO) to receive a user ID and password. The family name for the data base is PMS. Users will need an ADP workcode (also available from IMO) to get connected successfully to LPMS. For further

information call Donna Wood, at (703) 428-6154, E-mail: donna.wood@usace.army.mil or Jim Haga, at (703) 428-8565, E-mail: james.haga@usace.army.mil.

The LPMS Micro Edit is a PC data entry and edit software application program available from NDC for direct input of the required data at the lock installation. This program can be used instead of printed ENG forms and is subject to the same proprietary controls. Statistical reports can be printed from this program by Corps users to summarize the current set of data or past month's data.

Selected LPMS information is also available on NDC's Web Site. The monthly *LPMS Key Lock Report*, the *Summary of Lock Statistics*, and a monthly newsletter can be viewed or downloaded from the Web Site by anyone with access to the Internet.

Electronic Media. Utilities to extract lockage and vessel information in ASCII file format can be run by Corps and Government users with online access to LPMS's central data base. Data files can be supplied in ASCII or other standard data base formats to anyone on request. (Corps and other Government users should refer to an LPMS publication - *User Manual for Data Analysis*, NDC Report 90-L-4, for field descriptions, record layout, and file specifications.)

Publications.

- *Lock Performance Monitoring System: Summary of Lock Statistics.* This report displays tables for each Corps-operated lock and chamber and provides an overview of the traffic and operation at each lock. Information is presented in three sections: *Lock Characteristics General Report*; *LPMS Summary by River Basin*; and *LPMS Summary by Division/District*. Section 1 lists information about the physical characteristics of each lock chamber organized by river name and river mile for each lock; section 2 lists annual summary statistics organized by river name and river mile for each lock; section 3 lists comparisons of current and previous year summary statistics by direction and total organized by Division/District, and by river name and river mile for each lock. Data include the number of barges, lockages, and tonnages. The percentage of recreational craft and lockages is specified. Statistics on delays incurred at each lock chamber include total tows delayed, average length of delay, and total delay time. Section 3 of this report is run each quarter on a cumulative basis and is available upon request by calling

- (703) 428-8047, E-mail: robert.baldwin@usace.army.mil.
- *LPMS Key Lock Report.* This report provides a monthly summary and year-to-date total of commodity tonnages and barge traffic and contains data for 11 designated key lock sites or 14 chambers of the following rivers and waterways; Arkansas River - Norrell Lock; Columbia River - Bonneville Lock; Gulf Intracoastal Waterway - Calcasieu Lock and Inner Harbor Navigation Canal Lock; Illinois River - LaGrange Lock; Kanawha River - Winfield Lock Main and Auxiliary; Mississippi River - Lock 25, Lock 27 main and auxiliary chambers; Ohio River - Lock 52 main and auxiliary chambers; Tennessee River - Kentucky Lock; and Tombigbee River - Demopolis Lock.
 - *Standard Reports and Utilities.* There are currently 16 standard reports and 8 utilities. Refer to *User Manual for Data Analysis*, NDC Report 90-L-4, for report descriptions.
 - *Overview of the Lock Performance Monitoring System*, NDC Report 90-L-2. This manual provides an overview of the system including data collected, field and record definition, glossary of terms, and standard reports available for online computer access.
 - *User Manual for Data Collection and Editing*, NDC Report 90-L-3. This manual has been prepared to provide basic instruction in collecting, preparing, and analyzing LPMS data. Common problems in recording and editing data are discussed. The manual contains formats for data preparation and the final data files, as well as descriptions and formats of the various program look-up tables. The overall structure of the system, its components and their relation to the system are explained.
 - *User Manual for Data Analysis*, NDC Report 90-L-4. This manual has been prepared to provide basic instruction in analyzing and accessing LPMS data and reports. This manual contains descriptions and formats for data preparation, data base files, and various program look-up tables. Sample reports and detailed descriptions of each report are also found in this manual.

Special Requests. Special requests and inquiries may be directed to David Lichy, (703) 428-9052, E-mail:david.e.lichy@usace.army.mil. Written requests should be directed to *Lock Performance Monitoring System*, CEWRC-NDC, 7701 Telegraph Road, Casey Bldg., Alexandria, VA 22315-3868.

Lock Characteristics

Background. The Lock Characteristics data base contains information on the physical aspects of all USACE-built, -maintained, -owned or -operated locks. This data base relies on regular updates from field surveys and District personnel to provide the most current and accurate data about the physical aspects of locks. Lock Characteristics data are stored and maintained on NDC's EWS. Data from Lock Characteristics are used for in-house quality control purposes between LPMS and WCSC; X and Y coordinates for the GIS application; and as a basis for executive-level queries on the EWS.

Types of Data Collected. The physical aspects of each lock chamber are stored in the Lock Characteristics data base. Several categories of lock characteristics are maintained in the data base, which include the following:

- Location: River, mile point, latitude/longitude, town, county, Congressional district, Corps district, Corps division
- Physical Characteristics: Length, width, lift, depth, gate type, number of chambers
- Site Information: Lock operator, lock mail address, lock phone/fax number, radio call sign
- Site Characteristics: Channel length, channel width, pool elevation, pool length, lake pool, waterway project, waterway segment, mooring, multiple use of site
- Historical Change: Lock name, location, construction, replacement, transfers
- Management Information: Fiscal year budget, number of Federal full-time-employees, CWIS number, EROC number, authorized document, and district contact. NOTE: Management information is proprietary and available only to Corps users.

Accessing.

Online. Two reports are available on the Internet: *Lock Characteristics: Operational Statistics of Locks on the Inland Waterways* and *Lock Characteristics General Report*.

Electronic Media. An ASCII file is available for downloading from NDC's Web Site.

It is in the same format as the *Lock Characteristics General Report*. Data files can be supplied in ASCII or other standard data base formats to anyone on request. (Corps and other Government users should refer to the supplement: *Federal Guide to Navigation Data*, Lock Characteristics Data Dictionary, for field descriptions, record layout, and file specifications.)

Publications.

- *Lock Characteristics: Operational Statistics of Locks on the Inland Waterways* is an annual summary of all Corps-owned and/or Corps-operated locks listing physical characteristics and operational statistics such as number of tows and barges, tonnage, and average delay time.
- *Lock Characteristics General Report* lists physical characteristics of locks including year opened, chamber length and width, lift, structure type, status, and type of gate. This report is also part of the *Summary of Lock Statistics Report* as section 1.

Special Requests. Special requests and inquiries may be directed to Bob Baldwin, (703) 428-8047, E-mail:robert.l.baldwin@usace.army.mil. Written requests should be directed to *Lock Characteristics*, CEWRC-NDC, 7701 Telegraph Road, Casey Bldg., Alexandria, VA 22315-3868

APPENDICES

APPENDIX 1

Terminology

Waterborne Commerce Terminology

Sorted Alphabetically

Canadian Exports:	outbound domestic merchandise and re-export of foreign merchandise from a U.S. foreign trade zone destined for Canada.
Canadian Imports:	inbound merchandise for direct consumption and entries into custom bonded storage and manufacturing warehouses originating in Canada.
Coastwise:	domestic traffic receiving a carriage over the ocean, or the Gulf of Mexico, (e.g. New Orleans to Baltimore, New York to Puerto Rico, San Francisco to Hawaii, Alaska to Hawaii). Traffic between Great Lakes ports and seacoast ports, when having a carriage over the ocean, is also termed Coastwise.
Commodity Description	The first two digits of the WCSC publication codes correspond with the Lock Performance Monitoring System (LPMS) commodity codes. Both LPMS and WCSC codes were standardized to reflect the hierarchical structure of the Standard Industrial Trade Classification (SITC) Revision 3 commodity codes. SITC, Rev. 3 commodity codes conform to the Harmonized Commodity Description and Coding System (HS). Using SITC, Rev. 3 allows direct comparisons with U.S. imports and exports, as well as with commodity movements of other countries.
Downbound:	waterway traffic that moves in a downstream direction. For waterways without a characteristic monodirectional flow, "downbound" means in a southerly or westwardly direction.
Internal:	vessel movements (origin and destination) which take place solely on inland waterways. An inland waterway is one geographically located within the boundaries of the contiguous 48 states or within the boundaries of the State of Alaska. The term "internal traffic" is also applied to these vessel movements: those which involve carriage on both inland waterways and the Great Lakes: those occurring between offshore areas and inland waterways (e.g., oil rig supplies and fish); and those taking place within Delaware Bay, Chesapeake Bay, Puget Sound, and the San Francisco Bay, which are considered internal bodies of water rather than arms of the ocean.
Intra-territory:	traffic between ports in Puerto Rico and the Virgin Islands, U.S.A. which are considered a single unit.
Intra-waterway:	movements within the limits of a river, waterway or canal. This traffic will not include car-ferries and general ferries moving within a waterway or Corps project.
Intransit Merchandise	inbound merchandise coming into the United States from a foreign country and shipped to a foreign country without having been entered as an import. Intransit merchandise is treated as an Import when unloaded from a vessel and as an Export when loaded onto a vessel.

Waterborne Commerce Terminology

Intraport:	movement of freight within the confines of a port whether the port has one or several arms or channels included in the port definition. This traffic type will not include car-ferries and general ferries moving within a port.
Lakewise:	waterborne traffic between the United States ports on the Great Lakes System. The Great Lakes System is treated as a separate waterway system rather than as a part of the inland waterway system. In comparing historical data for the Great Lakes System, one should note that prior to calendar year 1990, marine products, sand and gravel being moved from the Great Lakes to Great Lake destinations were classified as local traffic. From 1990 on, these activities are classified as lakewise traffic.
Overseas Exports:	outbound domestic merchandise and re-export of foreign merchandise from a U.S. foreign trade zone destined for foreign countries other than Canada.
Overseas Imports:	inbound merchandise for direct consumption and entries into custom bonded storage and manufacturing warehouses originating in foreign countries other than Canada.
Receipts:	traffic moving from one location to another where the destination is within the limits of the subject port.
Shipments:	traffic moving from one location to another where the origin is within the limits of the subject port.
Through:	movements transiting a waterway, or stretch thereof, as defined in the project description of individual tables, and having origins and destinations outside of the defined area.
Ton-miles:	Water carriage ton-miles were first compiled and published in calendar year 1962. The distances used are statute miles. Domestic ton-miles are calculated by multiplying the tons of commerce being moved by the number of miles actually moved on the water (e.g. 50 short tons moving 200 miles on a particular waterway would yield million ton-miles for that waterway). The ton-mile parameter measures the total performance of a waterway. Ton-miles are not computed for ports. For coastwise traffic this represents the mileage on the shortest route that safe navigation permits between the point of origin and destination. The source of this distance information for coastwise traffic is the publication, <i>Distance Between United States Ports</i> , published by the National Oceanic and Atmospheric Administration (1987). For rivers and inland waterways the distances were computed from waterway survey maps and records of the Corps of Engineers. For the Great Lakes system the ton-miles are computed for movements of cargo west of the international boundary of St. Regis, Quebec, Canada to head of the lakes at Duluth/Superior. For Canadian imports and exports, foreign ton-miles are computed as the tonnage times the distance between U.S. and Canadian ports. For lakewise domestic movements, ton-miles equal the cargo tonnage times the distance between the U.S. Great Lakes ports. For overseas imports and exports, foreign ton-miles are computed by multiplying the cargo tonnage by the miles carried on U.S. waterways and channels. Ton-miles are rounded to the nearest million.

Waterborne Commerce Terminology

Tons: The tonnage figures provided throughout the Waterborne Commerce of the United States (WCUS) Parts 1-5 represent short tons (2000 pounds). Where noted tonnage figures are rounded to the nearest million. A zero represents less than 500,000 tons but more than zero. Dashes mean zero tons. Columns and rows may not add up exactly to totals and subtotals due to rounding.

Waterborne Commerce Terminology

Trans-Shipments: Ports and offshore anchorages where cargo is moved from one vessel to another. These are: St. Lucia, Virgin Islands; Heald Bank off LA-TX coast; Chirqui Grande, Panama; Puerto Armuelles, Panama; and Hondo Platform-Pacific Ocean.

Upbound: waterway traffic that moves in an upstream direction. For waterways without a characteristic monodirectional flow (e.g. the Gulf Intracoastal Waterway), "upbound" means in a northerly or easterly direction.

** Mississippi Valley Gulf Coast Region

Transportation Lines - Operator Master File
Field Descriptions

TS_OPER - (Col 1-7) TS_Operator is a 7-digit code assigned to the Transportation Lines vessel operator by Waterborne Commerce Statistics Center (WCSC). The vessel inventory for each TS_Operator is reported annually to WCSC and is contained in the Vessel Master File.

NAME - (Col 8-107) Name is a 100 character field identifying the TS_Operator company name.

ADDRESS - (Col 108-240) Address is a 133 character field containing the street address of the TS_Operator.

STATE - (Col 241-242) State contains the address state abbreviation for the TS_Operator.

ZIP - (Col 243-252) Zip is a 10 character field containing the first 5 digits, and if available, the last 4 digits of the nine digit zip code for the TS_Operator address.

AREA - (Col 253-255) Area is the 3-digit area code for the telephone number of the TS_Operator.

PHONE - (Col 256-263) Phone is an 8-digit alphanumeric field containing the telephone number of the TS_Operator, including a "-" between the first 3 digits and last 4 digits.

DIST - (Col 264-265) District contains a 2-digit code for the Corps District number in which the vessel is domiciled.

SERIES - (Col 266) Series contains the digit 3, 4 or 5 to designate the series in which this operator would have appeared under the previous policy of publishing three volumes. The three volumes were compiled by geographical region as follows:

- TS-3 Transportation Lines on the Great Lakes System
- TS-4 Transportation Lines on the Mississippi River System and the Gulf Intracoastal Waterway
- TS-5 Transportation Lines on the Atlantic, Gulf and Pacific Coasts

SERVICE - (Col 267) Service specifies the type of service in which the operator transports goods. These types of services are defined below:

- 1 Carriage performed for compensation that is regulated by the Interstate Commerce Commission (ICC).
- 2 Carriage performed for compensation, but exempt from regulation by the ICC.
- 3 Carriage performed by a private entity where the vessel and the goods being transported are owned by the same entity.

PRINC_COMM - (Col 268-507) Principal Commodities carried by the TS_Operator.

POINT_LOC - (Col 508-747) Points or Localities and Waterways between which or on which the TS_Operator operates.

FL_YR - (Col 748-749) File Year identifies the calendar year in which this inventory of vessels was compiled.

Transportation Lines - Vessel Master File

Field Descriptions

VESSEL - (Col 1-5) Vessel code is a unique vessel identification number assigned by Waterborne Commerce Statistics Center (WCSC).

VS_NAME - (Col 6-25) Vessel Name is a 20 character field used to describe the vessel by name.

VS_NUMBER - (Col 26-35) Vessel Number is a 10 character field used to describe the vessel number.

CG_NUMBER - (Col 36-45) Coast Guard Number is the official number assigned to this particular vessel by the U.S. Coast Guard at the time of registration. This number is normally retained by a vessel throughout the life of the vessel.

VTCC - (Col 46-49) Vessel Type, Construction and Characteristics field contains a 4 character alphanumeric code which describes in general terms the vessel type, construction and characteristics of its use; e.g. 2A22 represents the code for a self propelled tanker constructed of steel which is being used as a liquid bulk tanker. See Appendix 4, WTLUS for an explanation of the VTCC codes.

NRT - (Col 50-55) Net Register Tonnage (NRT) contains 6 numeric characters that specify the NRT of a particular vessel. The NRT is defined as the volume of space available for the accommodation of passengers and the stowage of cargo, expressed in units of 100 cubic feet for each net register ton. The NRT is recorded on the vessel's registration papers or it can be determined as the difference between gross tonnage and the volume of space used for the accommodation of the vessel master, officers, crew, navigation and propelling machinery expressed in units of 100 cubic feet per ton. The NRT should not be confused with a tonnage capacity because it simply expresses a volume capacity for passengers and cargo. Depending on the type of cargo being transported the tonnage that can be stowed in the volume of 100 cubic feet will vary, although generally speaking, the total tonnage capacity should not exceed three times the NRT of the vessel.

HRP - (Col 56-60) Horsepower contains 5 numeric characters which specify the horsepower rating for that particular vessel. The figures in this field represent the horsepower rating reported when the vessel was new or when the present engine was installed.

REG_LNGTH - (Col 61-66) Register Length contains 6 numeric characters which specify the register length of the vessel reported in units of feet to the nearest tenth. The register length of a vessel is the length measured on the top of the tonnage deck from the forepart of the outer planking or plating at the bow to the afterpart of the sternpost of screw steamers and to the afterpart of the rudder post of other vessels.

OVER_LNGTH - (Col 67-72) Overall Length contains 6 numeric characters which specify the overall length of the vessel reported in units of feet to the nearest tenth. The overall length is the extreme length of the vessel which would include any structure which extends beyond the outer planking or plating on the bow or any structure that extends beyond the sternpost on screw steamers and to the afterpart of the rudder post of other vessels.

Transportation Lines - Vessel Master File

REG_BRDTH - (Col 73-77) Register Breadth contains 5 numeric characters which specify the register breadth of the vessel reported in units of feet to the nearest tenth. The register breadth of a vessel is the breadth at its widest part measured from the outer side of the planking or plating on one side to the corresponding point on the opposite side.

OVER_BRDTH - (Col 78-82) Overall Breadth contains 5 numeric characters which specify the overall breadth of a vessel reported in units of feet to the nearest tenth. The overall breadth is the extreme breadth of maximum breadth to the outside of the vessel's structure. In paddle ships, this includes the paddle boxes.

HFP - (Col 83-87) Highest Fixed Point contains 5 numeric characters which specify the height of the highest fixed point on the vessel. The height represents the distance between the waterline of the vessel (when light) and the highest fixed point on the vessel, such as a pilot house, mast, etc. If the highest point of a vessel is a hinged stack or retractable pilot house, the distance is given to the hinge or top of pilot house in lowered position.

CAP_REF - (Col 88) Capacity Reference contains one alpha character which designates a type of cargo carried by that particular vessel as defined below:

Character	Type of Cargo
Blank	General bulk cargo
+	Railroad cars
#	Autos, vehicles, trailers
%	Cargo capacity R.R. cars
@	Vans
&	Container

CAP_PASS - (Col 89-92) Capacity Passengers contains 4 numeric characters that specify the passenger capacity of the vessel.

CAP_TONS - (Col 93-99) Capacity Tons contains 7 numeric characters that specify the full load capacity in short tons (2,000 lbs).

REBLT - (Col 100) Rebuilt contains either an asterisk or is blank. If this field contains an asterisk then the year given in the YEAR field will be the year rebuilt rather than the year built.

YEAR - (Col 101-104) Year identifies the calendar year the vessel was built or rebuilt. If Column 100 of this vessel record (REBLT field) contains an asterisk (*), then the year given in this field is the year rebuilt.

LOAD_DRFT - (Col 105-109) Loaded Draft contains 5 numeric characters which specify the draft of the vessel when fully loaded, reported in units of feet to the nearest tenth.

LIGHT_DRFT - (Col 110-114) - Light Draft contains 5 numeric characters which specify the draft of the vessel when it is empty, reported in units of feet to nearest tenth.

EQUIP1 & EQUIP2 - (Col 115-146) Equipment 1 and 2 each contain 16 alphanumeric characters which describe permanent fixtures, such as cranes, derricks, hoists, pumps, etc. and handling capacity and type of power used to operate the equipment, such as steam, electric, diesel, etc. EQUIP1 and EQUIP2 break up this descriptive data so that it can be printed in a two line format with EQUIP1 over EQUIP2.

Transportation Lines - Vessel Master File

STATE - (Col 147-148) State specifies the state abbreviation for the operating headquarters of the vessel.

BASE1 & BASE2 - (Col 149-168) Base 1 and 2 each contain a maximum of 10 alphanumeric characters which specify the city or locality which is the operating headquarters of the vessel. BASE1 and BASE2 break up this descriptive data so that it can be printed in a two line format with BASE1 over BASE2.

SERIES - (Col 169) Series contains one numeric character which identifies the vessel's primary area of operation as defined below:

Character	Area of Operation
3	Great Lakes System
4	Mississippi River System & the Gulf Coast Intracoastal Waterway
5	Atlantic, Gulf & Pacific Coasts

TS_OPER - (Col 170-176) TS_Operator is a 7-digit code assigned to the Transportation Lines vessel operator by WCSC. The vessel inventory for each TS_Operator is reported annually to WCSC and is contained in this Vessel Master File.

FL_YR - (Col 177-178) File Year identifies the calendar year in which this inventory of vessels was compiled.

APPENDIX 5

WCUS Manuscript Data

WCUS Manuscript Data File
Field Descriptions

TRAFFIC - (Col 1-2) Traffic is a 2-digit code that define the type of traffic in which the commodity was moved.

WATERWAY - (Col 3-6) Waterway is a 4-digit code that specifies the entity (port or waterway) for which statistics are compiled.

PUB_GROUP - (Col 7-10) Publication Commodity Group is a 4-digit WCSC publication commodity code. The first two digits corresponds with the Lock performance Monitoring System, LPMS, commodity codes. Both LPMS and WCSC codes were standardized to reflect the hierarchical structure of the Standard Industrial Trade Classification (SITC) Revision 3 commodity codes.

ALLO1 - (Col 11) Allocation Code 1 is a 1-digit code that provides additional traffic information (primary direction) with direction, such as inbound (receipts), outbound (shipments), intraport (local) and through movements.

ALLO2 - (Col 12) Allocation Code 2 is a 1-digit code that provides additional traffic information (secondary direction) with direction, such as upbound and downbound.

TONS - (Col 13-22) Cargo Tonnage is a 10-digit field. The tonnage figures represent short tons (2,000 pounds), rounded to the nearest thousand tons..

WCUS Manuscript Data File

Sample Reports

WCSC

Internal U. S. Waterways Monthly Tonnage Indicator 1993-1996*

	JAN	FEB	MAR	APR	MAY	JUNE	JULY	AUG	SEP	OCT	NOV	DEC
1993	46.0	43.4	47.5	48.0	50.9	50.6	36.1	44.8	51.5	54.5	51.9	48.7
1994	39.9	41.0	49.7	51.1	52.4	50.0	50.1	53.0	51.9	55.6	54.0	51.4
1995	49.5	44.7	52.6	53.4	45.1	47.2	53.3	52.1	51.8	55.2	54.4	50.5
1996	42.7	41.3	52.8	51.5								

*Internal: Moved solely within the boundaries of the U.S. This indicator is for monthly comparison purposes only. Adding the indicators for 12 months will not equal the total annual internal tonnage. Accumulative March-February Tonnage (millions) is
 1993-4: 565, 1994-5: 613, 1995-6: 600 (-2.2% from 1994-5).

INTERNAL U. S. WATERWAYS TONNAGE COMPARISONS: 1994 vs 1995*

Percentage Change of Tons

*1995 Estimated March 1996.

Internal: Moved solely within the boundaries of the U. S.

Rounding may cause slight discrepancies within the data.

**Includes domestic coastwise tonnage.

WCSC: GULF COAST, MISSISSIPPI RIVER SYSTEM AND ANTILLES

MCCLELLAN-KERR ARKANSAS RIVER NAVIGATION SYSTEM (CONSOLIDATED REPORT)

Section Included: Main stem of navigation system includes lower 10 miles of White River; Arkansas Post Canal; Arkansas River between Arkansas Post Canal and Muskogee, OK; and Verdigris River between Muskogee, OK and Catoosa, OK; (445 miles). Tributaries include the lower 5 miles of Lake Langhofer, lower 2 miles of Poteau River and the lower 10 miles of Sans Bois Creek (17 miles). Controlling Depth: 9 feet. Project Depth: 9 feet at low water stages.

Comparative Statement of Traffic
(thousand tons)

**Summary of United States Flag Passenger and Cargo Vessels
Operating or Available for Operation on 31 Dec '93**
(Exclusive of Fishing and Excursion Vessels, General Ferries, and
Dredges, Derricks, etc., used in Construction Work.)

Type of Vessels	Total 1992	31 Dec '93			
		Total 1993	Atlantic, Gulf and Pacific Coasts	Mississippi River System and the Gulf Intracoastal Waterway	Great Lakes System
SELF-PROPELLED					
Dry Cargo/and/or/Passenger steam or motor					
Number of vessels	2,323	2,332	841	1,343	148
Horsepower	7,134,476	7,191,506	4,521,487	2,092,667	577,352
Cargo Capacity (short tons)	6,948,466	7,044,279	4,464,627	455,094	2,124,558
Number of passengers(cap.)	138,288	155,672	83,734	53,880	18,058
Ferries, Railroad Car, steam or motor					
Number of vessels	572	572	376	111	85
Horsepower	829,547	856,682	601,668	189,503	65,511
Number of R.R. Cars (cap.)	----	----	----	----	----
Number of passengers(cap.)	170,876	178,151	138,470	20,543	19,138
Tankers, Steam or Motor					
Number of vessels	211	195	190	----	5
Horsepower	2,744,071	2,453,400	2,441,100	----	12,300
Cargo Capacity (short tons)	12,481,803	10,609,398	10,579,764	----	29,634
Towboats					
Number of vessels	5,205	5,224	1,745	3,291	188
Horsepower	8,837,422	8,999,262	3,237,577	5,558,105	203,580
TOTAL SELF-PROPELLED					
Number of vessels	8,311	8,323	3,152	4,745	426
Horsepower	19,545,516	19,500,850	10,801,832	7,840,275	858,743
Cargo Capacity (short tons)	19,430,269	17,653,677	15,044,391	455,094	2,154,192
Number of passengers(cap.)	309,164	333,823	222,204	74,423	37,196
NON-SELF-PROPELLED					
Barges and Scows, Dry Cargo					
Number of vessels	26,984	26,913	3,252	23,422	239
Cargo Capacity (short tons)	38,707,260	38,826,724	4,810,911	33,605,991	409,822
Tankers					
Number of vessels	3,905	3,862	664	3,173	25
Cargo Capacity (short tons)	10,742,569	10,719,103	3,762,173	6,911,513	45,417
Railroad Car Floats					
Number of vessels	10	10	6	----	4
Number of R.R. cars (cap.)	222	222	107	----	115
TOTAL NON-SELF-PROPELLED					
Number of vessels	30,899	30,785	3,922	26,595	268
Cargo Capacity (short tons)	49,449,829	49,545,827	8,573,084	40,517,504	455,239
Number of R.R. cars (cap.)	222	222	107	----	115
GRAND TOTAL, SELF-PROPELLED AND NON-SELF-PROPELLED					
Number of vessels	39,210	39,108	7,074	31,340	694
Horsepower	19,545,516	19,500,850	10,801,832	7,840,275	858,743
Cargo Capacity (short tons)	68,880,098	67,199,504	23,617,475	40,972,598	2,609,431
Number of Passengers (cap.)	309,164	333,823	222,204	74,423	37,196
Number of R.R. cars (cap.)	222	222	107	----	115

REFERENCE NUMBER ON MAP NO. 1	1	Dock Code No. 001	2	Dock Code No. 055
NAME	City of Chicago, Jardine Water Purification Plant Mooring.		Metropolitan Pier and Exposition Authority of Chicago, Navy Pier.	
LOCATION ON WATERFRONT	West side, Outer Basin, Chicago Harbor, approximately 0.3 mile north of Chicago Lock, Chicago. 1000 East Ohio Street		West side, Outer Basin, Chicago Harbor, approximately 850 feet north of Chicago Lock, at foot of East Grand Avenue, Chicago. 600 East Grand Avenue	
OWNED BY	City of Chicago.		Metropolitan Pier and Exposition Authority of Chicago.	
OPERATED BY	City of Chicago, Water Department.		Metropolitan Pier and Exposition Authority of Chicago.	
PURPOSE FOR WHICH USED	Mooring fireboat and city-owned equipment.		Landing and mooring for harbor excursion and sightseeing boats, and transient mooring for miscellaneous vessels.	
TYPE OF CONSTRUCTION	Concrete bulkhead with concrete-surfaced solid fill; fronted by timber fenders.		Steel pile, concrete-decked wharves extending from inner portions of both sides of pier, with 1,250-foot, center section of south wharf supported by concrete piles, all fronting timber bulkhead with timber-pile-supported, concrete cap and concrete-surfaced solid fill forming remainder of pier; sides fronted by rubber fenders.	
DESCRIPTION	Face		Face	North side South side
Dimensions (Feet)	2,040		65+292+120	2,420+90+550 2,342+105+553

Total Berthing Space Do.	2,040		-	2,420 2,342
Width of Apron Do.	Open.			Open.
Height of Deck at LWD Do.	5		8	
Load Capacity (Lbs. per Sq. Ft.)	-		-	
Lighted or Unlighted	Lighted.		Lighted.	
MECHANICAL HANDLING FACILITIES	None.		None.	
RAILWAY CONNECTIONS	None.		None.	
HIGHWAY CONNECTIONS	Via foot of East Ohio Street, from North Streeter Drive, each asphalt, 60 feet wide, and East Illinois Street, asphalt, 40 feet wide.		Via North Streeter Drive, asphalt, 60 feet wide, from foot of East Illinois Street, asphalt, 40 feet wide.	
WATER SUPPLY (For Vessels)	Through 3/4-inch line.		Through 2- and 2 1/2-inch lines.	
ELECTRIC CURRENT (For Vessels)	A.C., 110/220 volts.		A.C., 110/220 volts on south side.	
FIRE PROTECTION (Other than City)	Fireboat, and hydrants, hose, and hand extinguishers in plant at rear.		Hydrants, hose, and hand extinguishers.	
REMARKS	Fireboat is berthed at center of wharf most of the year; in the winter months, it berths at the Wacker Drive Wharf (Ref. No. 12). James W. Jardine Water Purification Plant is located at rear.		At time of survey (1994), Odyssey Cruises operated the <i>Odyssey II</i> , Spirit Cruises, Inc. operated the <i>Spirit of Chicago</i> , and Tee Dee Enterprises, Inc. moored <i>The Anita Dee</i> and operated <i>The Anita Dee II</i> from the wharf along the south side of the pier. The bulkheads forming the pier extend across the inner ends of the slips north and south of the pier, providing 340 and 490 feet of transient berthing space in 14 and 18 to 20 feet of water depth, respectively. Buildings on the pier are used for exhibits, convention facilities, and trade fairs.	

MARINE REPAIR PLANTS AND DRYDOCKING EQUIPMENT

REF. NO. OF NEAREST PIER OR WHARF	16	28 & 29
OPERATOR AND ADDRESS	AAA Boatyard, Inc. 1111 North Elston Avenue Chicago, IL 60622	Henry C. Grebe & Co., Inc. 3250 N. Washienaw Avenue Chicago, IL 60618
LOCATION OF PLANT	Mile 327.2, west side, North Branch, Chicago River, south of West Division Street Bridge, Chicago.	Mile 331.0, west side, North Branch, Chicago River, approximately 900 feet northwest of W. Belmont Avenue Bridge, Chicago.
REPAIR SHOPS AND EQUIPMENT	Hull repair shop; one 17½-ton, stiff-leg derrick.	Machine, welding, steel fabrication, paint, carpenter, and joiner shops; gas, arc, and heliarc welding; air compressors; one 75-ton, marine railway; one 50-, and one 12-ton, stiff-leg derricks.
NATURE OF WORK UNDERTAKEN	Above- and below-waterline repairs to steel, wooden, fiberglass and aluminum hulls up to capacity of derrick; painting; engine repairs.	Above- and below-waterline repairs to steel, wooden, fiberglass, and aluminum hulls up to 80 feet in length; engine repairs, including overhauling and rebuilding; conversion and outfitting of small vessels.
LARGEST SHAFTS PRODUCED	None.	None.
VESSEL CAPACITY AT PLANT	-	One on marine railway, 275 in yard and 25 at berth.
DRYDOCKING EQUIPMENT	None.	MARINE RAILWAY
Type of Construction		Crandall.
Dimensions (Feet):		80
Length of cradle.....		60
Clear width of blocks.....		18 (22 feet maximum).
Depth over blocks at top of keel blocks.....		7
Forward.....		7
Aft.....		
Hauling capacity (tons)		75
Largest vessel handled (feet)		80-foot length by 20-foot beam by 7-foot draft.
Date built/rebuilt		1926
Utilities available	Water and A.C., 110/220 volts.	A.C., 110/220 volts, compressed air and water.
REMARKS	Welding and diesel engine repair work is subcontracted. Yard has 2 acres for storing lifted-out, small vessels.	Transfer tracks extend from railway to storage tracks in yard and to 10 sheds at rear of wharves.
