-------------------------------	----

## **INTRODUCTION**

Data on rare earth (including yttrium) mines, deposits, and occurrences were compiled as part of an effort by the USGS and the University of Arizona Center for Mineral Resources to summarize current knowledge on the supply and demand outlook and related topics for this group of elements. Economic competition and environmental concerns are increasingly constraining the mining and processing of rare earths from the Mountain Pass mine in California. For many years, the deposit at Mountain Pass was the world's dominant source of rare earth elements and the United States was essentially self-sufficient. Starting approximately 10 years ago, the U.S. has become increasingly dependent (> 90 percent of separated rare earths) upon imports from China, now the dominant source of rare earths. Knowledge of the known economic and non-economic sources of rare earths is basic to evaluating the outlook for rare earth supply and associated issues.

## **DATA DESCRIPTION**

Data on rare earth mines, deposits, and occurrences were collected from a variety of sources, including: databases of the U.S. Geological Survey and other agencies; published literature; gray literature and unpublished data and compilations; and company, institute, and government websites. Data on rare earth occurrences were included in the compilation along with mines and deposits of known economic potential to better reflect the geologic spectrum of rare earth element concentration. Many of the occurrences have not been well studied and the economic potential is not really known. Throughout this report and the accompanying data tables, the following abbreviations are used: RE- rare earths; REE- rare earth elements; REO- rare earth oxides. For most of the deposits, the rare earths include yttrium. For a few deposits, yttrium is considered separately because it was treated separately in the literature. The compilation of rare earth mines, deposits, and occurrences may be found in Appendix A.

Data collected for this report include the following fields:

Deposit type

Deposit or district name

Location information:

Country

State or province

Latitude and longitude

Source of location information

Resource information

Tonnage/grade

Source of data

Production status

Mineralogy

Rare earth minerals

Other ore/significant minerals

Gangue/rock-forming minerals

Geochronology

Age (method, material)

Host rock

Company

Comments

References

The rare earth occurrences were initially classified into the following deposit types: carbonatites, carbonatites with residual enrichment, alkaline igneous complexes, hydrothermal iron-oxide deposits, deposits hosted by metamorphic rocks, shoreline placer deposits, alluvial placer deposits, paleoplacers, ion adsorption weathering crusts, phosphorites, uranium deposits, and "Other", a miscellaneous and unknown deposits category. To decrease the number of deposits classified as "Other", the following categories were added: other igneous-affiliated deposits (including pegmatites and veins) and placers of unknown origin. In addition, subcategories were used within the "Other" category for deposits of known deposit type, but with too few rare earth occurrences to justify a separate category. Sub-categories within "Other" include:

bauxite and laterite-hosted and those affiliated with fluorspar and lead deposits of various origins.

Within each deposit type, the mines, deposits, and occurrences are listed alphabetically. The deposit or district name field contains the most common name used in the literature for a given mine, deposit, or district/area. Common alternate names and spellings are shown in parentheses.

Location information for each site includes country name, state or province name, latitude and longitude in degrees and minutes where available, and a reference for the location information. Most location information was taken from published sources and no effort was made to verify its accuracy. Some province information and latitudes/longitudes were determined using location descriptions and online gazetteers such as those operated by United States National Imagery and Mapping Agency (<http://164.214.2.59/nimahome.html>) and the Australian National Mapping Agency (<http://www.auslig.gov.au/>).

A minimal amount of resource information is provided in 3 fields: resource tonnage/grade, source, and production status. Published tonnage and grade data are listed with different estimates separated by semicolons; the source(s) of the information are separated by semicolons to correspond with the resource figures. For the most part, this information represents geologic estimates. If the grades and tonnages in this field are known to be other than geologic estimates, that information is noted. The reader should know that for most resource estimates, the grade for REE or REO includes yttrium, if not, the yttrium grade will be listed separately. Most of the sites in this compilation are occurrences of rare earths. Other designations in the production status field include active producer, by product rare earth (RE) producer, past producer, and potential producer. This field is left blank if no information or conflicting information was given in the source document(s).

The next three fields describe the mineralogy of the site. Minerals known to be, or reported to be, rare earth-bearing are listed in the "RE Mineralogy" field. To help keep the size of the table compact, abbreviations are used for the mineral names; these abbreviations may be found in table 1. Ore & other significant minerals and gangue & rock-forming minerals of interest are found in the fields

**Table 1. Rare earth mineral codes and associated mineral names.**

<u>Code</u>	<u>Mineral Name</u>	<u>Code</u>	<u>Mineral Name</u>	<u>Code</u>	<u>Mineral Name</u>
aes	aeschynite	flor	florencite	par	parisite

fers	fersmite	mos	mosandrite		

following the rare earth mineralogy. The mineral names for the abbreviations used in these fields may be found in table 2.

Age of mineralization, age date method and (or) material, and host rock are the other fields containing geologic information. The age field contains a generalized geologic age classification and (or) a numeric age. If there is a numeric age, any data on the method, mineral, and rock source used to determine that age will be in the adjacent field. For instance, if a date was determined using K-Ar (method) on phlogopite (mineral or material) from carbonatite (rock source), "(K-Ar, phlo, carbonatite)" will follow the numeric age.

**Table 3. Other abbreviations and acronyms used in this report.**

<u>Abbreviation/ Acronym</u>	<u>Explanation</u>
ABMRGG	Australia Bureau of Mineral Resources, Geology and Geophysics
ama	as much as
ESCAP	Economic and Social Commission for Asia and the Pacific
HM	heavy mineral(s)
HREE	heavy rare earth elements
LREE	light rare earth elements
Ma	million years
MASMILS	Mineral Availability System, Mineral Information Locator System
MRDS	Mineral Resources Data System
Mt	millions of metric tons
NIMA	National Imagery and Mapping Agency
RE	rare earth(s)
REE	rare earth elements
REO	rare earth oxides, undifferentiated
USGS	U.S. Geological Survey

**Host rock** contains a description of the host rock for the mineralization and may contain the age of the host rock if it is different from the age of mineralization

The remaining fields in the data compilation list the owner/operator (Company) of the site, additional commentary on the site (Comments), and the references used to compile the data in the table (References). Data in the comments field may include location, geologic, or economic information. If a deposit's classification is uncertain, that information will also be listed in the comments field.

Appendix A. REE Deposits  
USGS OFO2-189

DEPOSIT			Mineralogy			Geochronology
TYPE	Deposit or district name	STATUS	REE Mineralogy	Other Ore or Significant Minerals	Gangue and Rock-forming Minerals	Age (method, mineral, rock)
CARBONATITE						
	Adiounedj	Occurrence	syn	flu, tit, apa, bar, pyro	qtz, cal, Fe oxides, can, sod, aeg-aug, cal	Permian?
	Agate Mountain	Occurrence	bas	flu, Mn		Post-early Cretaceous
	Aley		fers	pyro, col, apa, rut, mag, zir		349 ± 12 Ma (K-Ar, mica) -- Mississippian
	Amma (Amba) Dongar (Ambadungar)	Active F producer (2002)		flu, P		
	Anezrouf	Occurrence	pyro, woh	apa, tit, flu, zir, pyr	sod, can, aeg, aug, cal, wol, neph, pyx, bio	Permian or younger
	Argor (South Bluff Creek, James Bay, Alpha-B)			apa, Ti-mag, pyro, zir, pyr, cpy	dol, rie, phlo, cal, oliv, bio, aug	
	Bailundo	Occurrence	bas, par, syn, RE phosphates	apa, bar, pyro, mag, hol, str	cal, dol, ank	Cretaceous
	Barra do Itapirapua	Occurrence	bas, anc, syn, par	flu, gal, bar, str, pyro	cal, dol, mll, qtz	
	Bayan Obo (Baotou)	Current producer	bas, mon, aes, all, apa, par, hua, ferg, fers, xen, daq, cor, ccer, che, bri	mag, hem, flu, apa, bar, Nb-rut, col, mrt, pyro, pyr, ana	dol, qtz, cal, fld, arf, phlo, aeg, rie, bio	Middle Proterozoic-- 1580 Ma
	Bear Lodge Mountains (southern)	Large, low-grade resource of REE-Th	mon, xen, anc, bas	str, hem, thor, U, Nb, flu, Ba, mag	aeg-aug, act, qtz, fld, cal, bio, horn	38.3 to 50.5 Ma (K-Ar, san.)
	Bearpaw Mountains (Rocky Boy)	Occurrence	anc, bur	apa, Zr, U, Nb, pyr, mag, tit	pyx, anl, bio, aug, , neph, qtz, cal, fld	Eocene-- 49-55 Ma (K-Ar)
	Big Spruce Lake	Occurrence		flu, tit, apa, mag	bio, sod, neph, aeg, zeo	1785 Ma (K-Ar, bio, nepheline syenite)
	Bonga	Occurrence	par, syn	apa, pyr, bar, pyro, mag, rut, str, P	gar, cal, ank-dol, bio	
	Bou Naga	Past small producer?	bas, mon	Th, mag, bar, U, Sr, Nb, Cu, Zn, Zr		
	Capuia	Occurrence				

Appendix A. REE Deposits  
USGS OFO2-189

DEPOSIT		Host Rock(s)	Company	COMMENTS	REFERENCES
TYPE	Deposit or district name				
CARBONATITE					
	Adioumedj	fenite, rodbergite, syenite, carbonatite		Hydrothermal syn found in flu, cal, and qtz.	Woolley, 2001; Wall and Mariano, 1996; Mariano, 1983a; Sauvage and Savard, 1985
	Agate Mountain	beforsitic carbonatite, breccia, fenite		Carbonatite contains irregular patches of bastnasite.	Woolley, 2001; McManus and Schneider, 1994
	Aley	Aley Carbonatite complex-carbonatite		REE is associated with sovite veins.	Nokleberg and others, 1997; Pell, 1996
	Amma (Amba) Dongar (Ambadungar)	carbonatite		Veins in carbonatite.	Singer, 1998; Pell, 1996
	Anezrouf	nepheline syenite, ijolite, carbonatite, phonolite, pyroxenite, fenite			Woolley, 2001; Sauvage and Savard, 1985
	Argor (South Bluff Creek, James Bay, Alpha-B)	carbonatite, pyroxenite, gneiss			Woolley, 1987
	Bailundo	calcite carbonatite, phoscorite, fenite		Small scale mining of magnetite has occurred.	Woolley, 2001; Alberti and others, 1999
	Barra do Itapirapua	carbonatite (sovitic), nepheline syenite, pulaskite		ama 6% REE in hematite mine. REE probably from hydrothermal solutions.	Woolley, 1987; Mariano, 1989; Mariano, 1979; Ulbrich and Gomes, 1981
	Bayan Obo (Baotou)	dolomite, trachyte, fenite		MRDS gives location as 41-38N, 110-00E.	Singer, 1998; Drew and others, 1990; Castor, 1994; Mariano, 1989; Møller, 1989a; Jackson and Christiansen, 1993; Lee, 1970; Yuan Zhongxin and others, 1992; Kingsnorth and Harries-Rees, 1993; Wu and others, 1996; Zhang Peishan and others, 1995; Zhou, 1980; Chao and others, 1989; Yuan Zhongxin and others, 2000
	Bear Lodge Mountains (southern)	trachyte, phonolite, minor syenite and nepheline syenite, carbonatite		Veins and disseminated deposits. Samples ranged from 112 to 30000 ppm with REE more abundant than Th. Area incompletely explored.	Woolley, 1987; Mariano, 1989; Jackson and Christiansen, 1993; King, 1991; Mariano, 1981a
	Bearpaw Mountains (Rocky Boy)	shonkonite, monzonite, porphyritic potassic syenite, pyroxenite		Lat-long is for the Rocky Boy stock.	Woolley, 1987; Hearn and others, 1964; Wall and Mariano, 1996
	Big Spruce Lake	ijoite, ultramafic rocks, syenite, carbonatite			Woolley, 1987
	Bonga	carbonatite, fenite		Carbonatite plug.	Premoli, 1994; Woolley, 2001; Alberti and others, 1999
	Bou Naga	hydrothermal carbonatite		LREE dominant. Deposit was worked for 18 months 1968-1970. AOMR gave location of 18-59N, 13-19W.	Jackson and Christiansen, 1993; Neary and Highley, 1984; Arab Organisation for Mineral Resources, 1987
	Capuia	carbonatite, fenite		High grades of REE and Th have been reported.	Premoli, 1994; Woolley, 2001

DEPOSIT			Mineralogy			Geochronology
TYPE	Deposit or district name	STATUS	REE Mineralogy	Other Ore or Significant Minerals	Gangue and Rock-forming Minerals	Age (method, mineral, rock)
	Carb Lake	Occurrence	syn, anc	apa, mag, pyro, pyr, flu, vrm	cal, dol, bio	1824 Ma
	Cerro Manomo	Occurrence	bas, mon, cer, La-Nd phosphates and silicates	bar, apa, carbonate-hapa, carbonate-fapa, coll, Th, U, Sc, Nb	qtz, goe, p	Cretaceous?
	Changit	Occurrence		pyro, Ti-mag, tit, prv, apa	aeg-aug, neph, bio, fid, phlo	
	Chernigovskii (Novopol'tavskii)	Occurrence	mon, all, anc, Ce-ferg	apa, mag, ilm, pyro, zir, tit, ana, bad, col	aeg, bio, amph, phlo	1820 - 2190 Ma
	Chiriguelo	Occurrence	mon, cer, ppyro	thor, U-pyro		128 ± 5 Ma (K-Ar, bio, sovite)
	Coola	Occurrence	par, syn, RE phosphates	bar, flu, Sr, Nb, Zn	dol, qtz	Cretaceous
	Dalkainle	Occurrence	all	mag, bar, Sr, pow, mlyb, apa, zir, pyro, pyr, pyrh, Cu	dol, cal, qtz	
	Deep Creek	Occurrence		Nb, P, F, Sr	qtz, amph, aen	
	Eldor Carbonatite Complex	Occurrence	mon	apa, pyro, fers, zir, rut, bad, U, mag	cal, dol, ank, phlo, aeg	Precambrian
	Elet'ozerskii (Elet'ozero)	Occurrence	all	apa, ilm, Ti-mag, pyro, zir, tit, col, fers, thor	mcc, neph, aeg, arf, bio	1740-1860 Ma
	Elk Creek			hem, bar, pyr, cpyr, gal, sph, apa, flu	dol, ank, phlo, ser, qtz, fld	Pre- Pennsylvanian
	Eureka	Potential resource	mon	Zr, mag, gra	dol, cal	Cambrian-Ordovician
	Fen	Past Nb-Fe producer; REE occurrence	mon, syn, par, bas	hem, pyro, apa, mag, Th, flu, zir, bar	cal, trem, mica, top, zoi	
	Francon Quarry - Orleans (Eastview)	Occurrence		apa, Nb, Mo, Sr	phlo, dol	Lower Cretaceous
	Gatineau		par, syn, mon	apa		
	Gem Park	Past prod of vrm, Ni, Ag	fers, anc, mon	Nb, Th, Cu, apa, str, vrm, bar, mag, lue, nnb, thrn, Ni, Ag	dol, cal, aeg, phlo	551 Ma (K-Ar, rie, fenite)

Appendix A. REE Deposits  
USGS OFO2-189

DEPOSIT		Host Rock(s)	Company	COMMENTS	REFERENCES
TYPE	Deposit or district name				
	Carb Lake	calcite carbonatite		Intrusion does not crop out. Locally REE concentrations am 72%.	Woolley, 1987; Erdosh, 1979; British Sulphur Corporation, 1987
	Cerro Manomo	Manomo carbonatite complex- silicified carbonatite, tuff, agglomerate		Ama 25% P2O5 locally, am 0.12% U. Part of the Velasco Alkaline Provine of eastern Bolivia. Area has been silicified.	Litherland and others, 1986; Woolley, 1987; Wall and Mariano, 1996; British Sulphur Corporation, 1987; Fletcher and others, 1981; Fletcher and Litherland, 1981
	Changit	jacupirangite, melteigite, carbonatite, stockworks, limestone		In Maimecha-Kotui extrusive province.	Kogarko and others, 1995
	Chernigovskii (Novopol'tavskii)	beforsite, alvikite, carbonatite breccia, syenite, pyroxenite			Kogarko and others, 1995
	Chiriguelo	sovite, rodbergite, carbonatite, syenite, fenite		There is small scale development of laterite with this deposit.	Wall and Mariano, 1996; Woolley, 1987
	Coola	carbonatite breccia, syenite, ijolite, fenite		Ama 12500 ppm La has been detected in samples.	Premoli, 1994; Woolley, 2001; Alberti and others, 1999
	Dalkainle	carbonatite, syenite, nepheline syenite, gneiss			Woolley, 2001
	Deep Creek	pantellerite		SE of Crane Mountain.	Woolley, 1987; Walker, 1961
	Eldor Carbonatite Complex	syenite, calcite carbonatite, dolomite carbonatite, ankerite carbonatite, glimmerite, feldspathic breccia			Wright, 1997; Wright and others, 1998
	Elet'ozerskii (Elet'ozero)	carbonatite, alkaline pegmatites, nepheline syenite, gabbro, pyroxenite			Kogarko and others, 1995
	Elk Creek	carbonatite		Near Usakos. REE 0.35-1.86% in carbonatite 200 m below Quaternary and Pennsylvanian sediments.	Woolley, 1987
	Eureka	carbonate rocks		Carbonatite dikes on Eureka 99 farm, 38 km W of Usakos. Resource estimate is to depth of 20 m.	Murray, 1989; ; Murray, 1991; Woolley, 2001
	Fen	ankerite carbonatite, hematite-rich carbonatite		Past production of Fe and Nb. REE are highest in rodberg that is red from finely dispersed hematite.	O'Driscoll, 1995; Bugge, 1978; Wall and Mariano, 1996
	Francon Quarry - Orleans (Eastview)	limestone		Carbonatite dikes in limestone have high concentrations of La, Ce, Nb, Mo and Sr.	Woolley, 1987
	Gatineau	calcite carbonatite			Wall and Mariano, 1996
	Gem Park	gabbro, pyroxenite, tuff		Carbonatitic dikes. Concentrations of Th, REE, Cu, P, and vermiculite have not been fully appraised.	Woolley, 1987; Mariano, 1989

DEPOSIT		Host Rock(s)	Company	COMMENTS	REFERENCES
TYPE	Deposit or district name				
	Glenover	carbonatite, pyroxenite, breccia		Apatite locally constitutes 20% of the ore.	Möller, 1989a; Woolley, 2001
	Gornoe Ozero (Gornoozerskii, Ozrnyi)	carbonatite, pyroxenite, ijolite			Nokleberg and others, 1997; Kogarko and others, 1995
	Goudini	sovite and beforsite (some metamorphosed), volcanic breccia, tuff		The Goudini volcano sits atop ultrabasic rocks on the eastern margin of the Bushveld Complex.	Mariano, 1989; Woolley, 2001; Adrian and others, 1989
	Hicks Dome	peridotite, intrusive breccia		Ore contains 0.42% REO and 0.15% ThO <sub>2</sub> .	Woolley, 1987; Jackson and Christiansen, 1993
	Iron Hill (Powderhorn, Cebolla Creek)	carbonatite, ijolite, nepheline syenite, pyroxenite, melasyenite, fenite	Teck Resources Corp.		Anstett, 1986; Castor, 1994; Woolley, 1987; Pell, 1996; Möller, 1989a; Thompson, 1990
	Itanhaem	tinguaite dikes		REE found in biotite tinguaite dikes.	Mariano, 1989; Woolley, 1987
	Kalkfeld (Etaneno)	carbonatite, syenite, foyaite, iron ore		11 km NW of Kalkfeld. Fe ore and carbonatites are enriched in La, Ce, Neodymium, and thorite.	McManus and Schneider, 1994; Jackson and Christiansen, 1993; Mining Journal, 1989a; Woolley, 2001
	Kapfrugwa (Gungwa)	magnetite-carbonate rock, apatite-magnetite rock		Probably metamorphosed carbonatite. Apatite-magnetite rocks contain ~11% P2O5, 600 ppm Th, and several thousand ppm Ce + La.	Woolley, 2001
	Keshya	carbonatite (limestone)		This unit has been mapped as a limestone, but chemistry is consistent with late-stage carbonatite.	Woolley, 2001
	Khamna (Khamninskii)	metasomatic carbonate, nepheline syenite, peralkaline syenite		Fluorite-carbonate veins and stockworks 0.1 to 1.5 km long and 1.4 - 30 m thick.	Nokleberg and others, 1997; Kogarko and others, 1995
	Khanneshin	carbonatite, tuff, agglomerate, phonolite			ESCAP, 1995; Abdullah and others, 1977; Alkhazov and others, 1978
	Kirumba	syenite, minor carbonatite			Woolley, 2001
	Kizilçaören	phonolite, trachyte, and alkaline pyroclastic rocks	Maden Tetik ve Arama Enstitütüsü	Bastnasite-fluorite-barite rock lenses associated with carbonatite dikes. Lat-long is for population center of same name.	Castor, 1994; Morteani and Satir, 1989
	Kugda	phoscorite, nephelinite, melteigite, olivinite, jacupiranite, syenite, glimmerite		In Maimecha-Kotui extrusive province.	Kogarko and others, 1995

DEPOSIT		Host Rock(s)	Company	COMMENTS	REFERENCES
TYPE	Deposit or district name				
	Mushgai Khudag (Mushgja Khudag, Mushugai Khuduk, Mushugai-Hudag)	magnetite-apatite rock, potassic alkaline volcanic rocks, carbonatite, melanephelinite, melaleucitite		Apatite has high REE.	Singer, 1998; Möller, 1989a; ESCAP, 1999; Kovalenko and Yarmolyuk, 1995; Samoylov and others, 1988; Mariano, 1998
	Namo-Vara				Premoli, 1994
	Narssarssuaq (Narssarsuk)	carbonatite, alkaline intrusive, tuffisite, ultrabasic rock			Mariano, 1989; Woolley, 1987; Roskill, 1988
	Ngualla	carbonatite, breccia		Magnetite-apatite veins up to 20 m wide and several hundred meters long contain 12-35% P2O5.	Woolley, 2001
	Nizhnesayanskii	carbonatite, syenite, urtite-melteigite-jacupirangite			Kogarko and others, 1995
	Nkombwa Hill (Nkumbwa, Nkumba)	magnesian carbonatite, rauhaugite, breccia			Neary and Highley, 1984; Overstreet, 1967; de Kun, 1987; Woolley, 2001
	Nolan's Bore	carbonatite	Arafura Resources NL (1999)	130 km N of Alice Springs, 8 km W of Stuart Hwy. In places REE grades exceed 10%.	Mariano, 2000; Australia Mining and Exploration website, 2000, accessed at URL <a href="http://www.reflections.com.au/MiningandExploration/Companies/Prospectus.html">http://www.reflections.com.au/MiningandExploration/Companies/Prospectus.html</a>
	Nooitgedacht (Gelukshoek, Nooitgedagt)	sovite, beforsite, pyroxene fenite, syenite, tinguaite			Woolley, 2001
	North Fork area	carbonatite dikes			Castor, 1994; Woolley, 1987
	Nsengwa	carbonatite, agglomerate, carbonatite agglomerate			Woolley, 2001
	Okorusu Complex	carbonatite, iron deposits, nephelinite, pyroxenite, syenite, foyaite, aegirine fenite	Solvay Group (1997)	On Brandenburg 87 farm. Mineralization in beforositic carbonatite dikes and carbonate-fluorite-bearing metasomatises. Significant HREE content.	Murray, 1991; Woolley, 2001; McManus and Schneider, 1994; de Kun, 1987; Hagni and Shvidasan, 2001
	Ondurukurme Complex (Ondumakurume, Kameelberg)	beforsite, sovite, breccia, syenite		Ondumakurume complex forms a prominent hill on the Etaneno 44 farm, about 10 km NE of Kalkfeld. Separation of ore is problematic. Carbonatite contains 3% REO, 7% P2O5, 2.5% SrCO3.	Mining Journal, 1989a; Murray, 1989; Pell, 1996; Woolley, 2001; McManus and Schneider, 1994
	Palabora (Phalaborwa)	weathered pyroxenite, carbonatite, phoskorite	Foskor Ltd. And Palabora Mining Co. Ltd. (1995)	Possible by-product REE recovery. Apatite concentrates contain 0.4-0.9% REO.	de Kun, 1987; Neary and Highley, 1984; Jackson and Christiansen, 1993; Kovalenko and others, 1976; Skillen, 1995; Pell, 1996; Möller, 1989a; Woolley, 2001

	Stjernoy	Producer of nepheline syenite		P, Ba, Sr		

Appendix A. REE Deposits  
USGS OFO2-189

DEPOSIT		Host Rock(s)	Company	COMMENTS	REFERENCES
TYPE	Deposit or district name				
	Qaqarssuk	carbonatite, gneiss, fenite		Concentrations of Fe, V, Nb, U, & P in carbonatites and ultramafic rocks. Ages from 3 carbonatite bodies.	Notholt and others, 1989a; Woolley, 1987
	Ravalli County	carbonate veins and dikes, metamorphic rocks		REE in carbonate veins and dikes in metamorphic rocks.	Crowley, 1960; Mariano, 1989; Woolley, 1987
	Rock Canyon Creek (Candy)	dolostone, limestone; lesser shale, sandstone		No link to igneous activity known, but many workers believe deposit related to hidden carbonatitic magmatism. REE mineralization is carbonate-hosted vein and breccia-matrix mineralization with fluorite and lesser barite.	Hora, 1990; Samson and others, 2001
	Salitre I and II	syenite, nepheline syenite, pyroxenite, trachyte, carbonatite		High REE.	Castor, 1994; Woolley, 1987; Mariano, 1989; Ulbrich and Gomes, 1981
	Salmon Bay	lamprophyre and phonolite dikes, graywacke		Veins.	Houston and others, 1958
	Sandkopsdrif (Zandkops Drift)	glimmerite, carbonatized intrusions		Complex about 1 km in diameter.	Mariano, 1989; Woolley, 2001
	Sangu Carbonatite Group, Karema Depression (includes Ikola, Ikambwa, Middle carbonatites)	carbonatite, fenite			Woolley, 2001
	Sarfartoq	carbonatite (rauhaugeite and sovite); fenite		Environmental restraints hinder commercial interest.	Notholt and others, 1989a; Möller, 1989a; Woolley, 1987
	Sarnu	carbonatite dikes		Dikes ~10 cm wide.	Wall and Mariano, 1996
	Silinjarvi	carbonatite; glimmerite, syenite; diabase; fenite; dioritic dykes	Kemira Group	Apatite contains 0.4% REE.	Isokangas, 1978
	Sokolo	carbonatite, carbonatitic breccia, agglomerate		Part of Wasaki carbonatite complex.	Woolley, 2001
	Songwe Scarp	carbonatite, K-feldspar rock			Woolley, 2001
	Soroy				USGS unpublished files
	Springer (Lavergne)	granite, fenite, carbonate veins		Near Brule Creek in Springer Township. Classification uncertain.	Woolley, 1987
	St. Honoré	carbonatite, syenite, nepheline syenite, ijolite	Soquem	REE range from 0.1-1.7%. Complex is 8 km x 6.5 km. Carbonatite core is surrounded by syenite and other alkaline rocks.	Notholt and others, 1989a; Harben and Kuzvar, 1996; Singer, 1998; Woolley, 1987; Pell, 1996; Wall and Mariano, 1996; British Sulphur Corporation, 1987
	Stjernoy	alkaline intrusions, carbonatites, ultramafics			Olerud, 1993

DEPOSIT		Host Rock(s)	Company	COMMENTS	REFERENCES
TYPE	Deposit or district name				
	Catalão I	carbonatite, pyroxenite, serpentinized peridotite, glimmerite		Plug- 6 km in diameter. Woolley gives location as 18-08S, 47-50W.	Azevedo Branco, 1984; Gierth, and Baecker, 1986; Singer, 1998; Woolley, 1987; Mariano, 1989; Morteani and Preinfalk, 1996
	Catalão II	sovite, phoscorite, glimmerite		15 km N of Catalao I.	Pell, 1996; Woolley, 1987; Eby and Mariano, 1992
	Cerro Impacto	laterite, carbonatite, fenite		Very deeply weathered.	Aarden and others, 1973; Castor, 1994; Woolley, 1987; Mariano, 1989
	Chilwa Island	carbonatite, sovite, breccia			Woolley, 2001
	Cone Negosa (Negoza)	carbonatite		Premoli classified this deposit as metasomatic.	Premoli, 1994; Woolley, 2001
	Goiás				Mariano, 1989
	Kaluwe			In Rufunsa Rift.	de Kun, 1987; Simukanga and others, 1994; Turner and others, 1989; Woolley, 2001
	Kangankunde	dolomitic carbonatite, fenite		Mon almost thorium-free. Carbonatite contains average of 7% euhedral green mon crystals. High iron content. Locally, REE of hydrothermal origin.	Anstett, 1986; Castor, 1994; Notholt and others, 1990; de Kun, 1987; Neary and Highley, 1984; Mariano, 1989; Pell, 1996; Wall and Mariano, 1996; Woolley, 2001; Deans, 1966; Mariano, 1996
	Kapiri	carbonatite dikes cut Precambrian dolomite			Woolley, 2001
	Karonge (Gakara)	metasedimentary rocks, gneiss, granite	Societe Miniere de Muindinga et de Kigali (1988)	REE deposit in quartz-barite-bas-mon stockworks of uncertain affiliation, but assumed in references to have carbonatite source. Weathering has produced rhab and cer. Production ceased, due to irregular distribution of grade, in 1978.	Harben and Bates, 1990; Mariano, 1989; Möller, 1989a; Jackson and Christiansen, 1993; de Kun, 1987; Roskill, 1988; Woolley, 2001; Wambeke, 1977
	Lu cuiisse (Lucuisse)	carbonatite		Premoli reports that deposit is metasomatic. Residual deposits are commonly 7-8 m thick, but can be 30 m thick.	Premoli, 1994; Woolley, 2001
	Mabounie	carbonatite, weathered carbonatite, syenite			Jackson and Christiansen, 1993; Notholt, 1994; Morteani and Preinfalk, 1996; Woolley, 2001
	Magnet Cove	iijolite, melteigite, jacupirangite, pyroxenite, syenite, trachyte, carbonatite			Pell, 1996; Mariano, 1989; Woolley, 1987
	Maicuru	laterite, ultrabasic alkaline intrusives with probable carbonatite		Intrusions covered by laterite.	Castor, 1994; Woolley, 1987; Mariano, 1989; Lemos and de Costa, 1987

DEPOSIT		Host Rock(s)	Company	COMMENTS	REFERENCES
TYPE	Deposit or district name				
	Maraconai	probably alkaline-ultrabasic intrusions		2 intrusions; lat-long is for the northern intrusion. Deep lateritic cover.	Mariano, 1989; Woolley, 1987; Ulbrich and Gomes, 1981
	Martison Lake	carbonatite; ultrabasic kimberlites and porphyry diatreme breccias	MCK Mining Corp. (1999)	Development hampered by lack of all-weather access. 100 km N of Hearst. Residuum is a coarse gray apatite sand about 170 m thick.	Mariano, 1989; Guillet, 1985; Notholt and others, 1989a; Potapoff, 1989; Canada Department of Energy, Mines, and Resources, 1984; Jasinski, 2000
	Matum (Marum, Mutum)	nepheline syenite, weathered carbonatite		Most of intrusion lies in Guyana.	Woolley, 1987; Ulbrich and Gomes, 1981
	Mbeya (Panda Hill)	beforsite, sovite, agglomerate, tuff, fenite		Nb reserve.	Möller, 1989a; de Kun, 1987; Woolley, 2001
	Morro Dos Seis Lagos (Sao Gabriel da Cachoeira)	weathered carbonatite		3 carbonatitic alkaline pipes that form laterite-covered hills. Laterites average 230 m in depth. Woolley gives location as 0-17N, 66-41W.	Azevedo Branco, 1984; Cuadros Justo and Souza, 1986; Woolley, 1987; Mariano, 1989; Issler, 1978
	Mount Weld	carbonatite	Ashton Mining Ltd. (2000)	Mon has < 0.3% ThO <sub>2</sub> . Pilot plant at site in 1993.	Harben and Kuzvar, 1996; O'Driscoll, 1988; Industrial Minerals, 1990; Duncan and Willet, 1990; Mariano, 1989; Morteani and Preinfalk, 1996; Lottermoser, 1990; Griffiths, 1992; Fetherston and others, 1997; Mining Journal, 1989c; Dreissen, 1990; Western Australia Department of Mineral and Petroleum Resources, 2001, accessed at URL <a href="http://www.dme.wa.gov.au/">http://www.dme.wa.gov.au/</a>
	Mrima Hill	sovite, lamprophyre, agglomerate, fenite,	Rhone-Poulenc (1981)	Supergene.	Singer, 1998; Mariano, 1989; Deans, 1966; Möller, 1989a; Woolley, 2001; Parker and Baroch, 1971
	Oka	carbonatite, okaite, melteigite, urtite, alnoite		Apatite from the Bond zone averages 8.6% REO. 1956 resource estimate was for Advance Red Lake GML holdings. Average age based on 28 determinations from 22 samples.	Castor, 1994; Singer, 1998; Woolley, 1987; Pell, 1996; Mariano, 1989; Chakhmouradian, 1996; Möller, 1989a; British Sulphur Corporation, 1987; Eby, 1971
	Ruri Complex	carbonatite, carbonatite agglomerate, nepheline syenite, phonolite plugs		Complex of twin, deeply eroded, carbonatitic volcanoes.	de Kun, 1987; Idman and Mulaha, 1991; Möller, 1989a; Jackson and Christiansen, 1993; Woolley, 2001
	Sallanlatvi (Sallanlatvinskii)	dolomitic carbonatite, calcite carbonatite, ijolite, melteigite		Apatite, barite, and REE are concentrated in the weathered crust.	Kogarko and others, 1995; Chakhmouradian, 1996; Belolipetskii and Voloshin, 1996
	Sebl'yavr Carbonatite Complex (Seblyavr)	gneis, pyroxenites, phoscorite		Carbonatite veins.	Kogarko and others, 1995; Belolipetskii and Voloshin, 1996; British Sulphur Corporation, 1987
	Serra Negra	weathered carbonatite, peridotite, dunite, shonkinite, jacupirangite		Hi LREE/HREE ratio.	Castor, 1994; Mariano, 1989; Azevedo Branco, 1984; Ulbrich and Gomes, 1981
	Sokli	carbonatite, weathered carbonatite		REE content of the apatite is similar to that of the Khibina complex (Isokangas, 1978).	Isokangas, 1978; Virtainen, 1989

	Korsun-Novomirgorodskii pluton margin	Occurrence	all, che	zir, ilm, apa, Nb	fay, hed	

DEPOSIT		Host Rock(s)	Company	COMMENTS	REFERENCES
TYPE	Deposit or district name				
	Jacupiranga	pyroxenite, jacupirangite, ijolite, nepheline syenite, fenite			Mariano, 1989; Azevedo Branco, 1984; Melcher, 1966; Platt, 1996b; Woolley, 1987
	Jarud Qi, no. 801	riebeckite or arfvedsonite granite		Lat-long for the town of Jarud Qi.	Wen Lu, 1998
	Junguni	nepheline syenite, foyaite			Woolley, 2001
	Kamloops	syenite		Low grade Cu mineralization.	Woolley, 1987
	Karaganskii	alkaline syenite, nepheline syenite			Kogarko and others, 1995
	Karsakpai	lepidomelane syenite, liebenerite syenite, nepheline syenite		REE associated with albitization of syenites.	Kogarko and others, 1995
	Khaldzan-Buregtey	peralkaline granite, gabbro, basalt, pantellerite dikes, syenite		In western Mongolia. Discovered in 1984. Host rocks have been metasomatized.	Kovalenko and Yarmolyuk, 1995; Kovalenko and others, 1995
	Khan Bogdo	peralkaline granite, syenite, pegmatites		In southern Mongolia. Lat-long for town of Khan Bogdo.	Möller, 1989a; Kovalenko and others, 1976; Kovalenko and Yarmolyuk, 1995
	Khibina (Khibiny)	alkaline metasomites-- foyaite, nepheline syenite, ijolite, rischorrite, urtite, pegmatites, carbonatite?		Largest igneous apatite deposit in the world, in urtite-ijolite. REE minerals largely in alkaline rocks not carbonatite (Kogarko and others, 1995). Small bodies of carbonatites contain ~9% REE, 6.5% Sr, 3% Ba.	Castor, 1994; Kogarko and others, 1995; Zaitsev, 1996; Chakhmouradian, 1996; Beliolipetskii and Voloshin, 1996; Wall and Mariano, 1996; Pell, 1996; Neary and Highley, 1984; Hedrick and Templeton, 1991
	Kipawa Lake	peralkaline quartz syenite, amphibole schist		Mineralization probably resulted from high-grade metamorphism without obvious igneous relics. Geochemistry of some eudialyte-rich rocks strongly suggests metasomatic origin.	Castor, 1994; Woolley, 1987; Currie and Van Breemen, 1996
	Kodal	jacupirangite dike	Norsk Hydro (1978)		Notholt, 1979; British Sulphur Corporation, 1987; Möller, 1989a; Bugge, 1978
	Konder	alkaline pegmatite in dunite, olivinite, clinopyroxenite			Kogarko and others, 1995
	Korgeredaba	foyaite, pulaskite, essexite, granite, peralkaline syenite			Kogarko and others, 1995
	Korsun-Novomirgorodskii pluton margin	monzosyenite, syenite, rapakivi granite, gabbro, granite		REE and Zr concentrated in syenite. Syenite enclosed by rapakivi granite.	Kogarko and others, 1995

	Red Wine	syenite, gneiss		Has been U, Zr, Be, and REE prospect. Same as Shallow Lake? Age is average of 11 whole rock samples with relic igneous textures.	Woolley, 1987; Castor, 1994
	Rexspar (Birch Island)	alkalic volcanics			Nokleberg and others, 1997
	Saima	Fengcheng alkaline complex-- syenite, nepheline syenite, phonolite		Significant U, Th, Nb potential. Lat-long for town of Saima.	Wu and others, 1996; Zhang Peishan and others, 1995
	Sakhariokskii (Sacharijok)	nepheline syenite, syenite		Syenite is metasomatically altered.	Kogarko and others, 1995; Belolipetskii and Voloshin, 1996
	Seligdar	apatite rock, syenite porphyry		Potassic alkaline igneous complex. Unclear if deposit high-temperature apatite-bearing carbonatite or phosphate mobilized from surrounding country rocks.	Möller, 1989a; Kogarko and others, 1995
	Shallow Lake	syenite of Red Wine Complex		Same as Red Wine?	Castor, 1994
	Shartolgoi	alkaline granites			ESCAP, 1999
	Shvanidzorskii	peralkaline syenite, nepheline syenite			Kogarko and others, 1995
	Sierra de Tamaulipas	nepheline syenite, ijolite, urtite, juvite, gabbro, diorite		Veins in outcrop of alkaline rocks with area of 9 km <sup>2</sup> . Area has undergone fenitization (alkaline metasomatism). Most veins <2 m wide.	Woolley, 1987; Gómez-Caballero, 1990; Elias-Herrera and others, 1990
	Songwe Syenite (includes Ilomba and Ulindi intrusions)	syenite		Central location for large outcrop area.	Woolley, 2001
	Srednetatarskii (Zaangarskii)	ijolite, foyaite, syenite		REE minerals in pegmatites.	Kogarko and others, 1995
	Srednevorogovskii	nordmarkite, peralkaline granite			Kogarko and others, 1995
	Strange Lake (Lac Brisson)	pegmatite in peralkaline granite	Iron Ore Co. of Canada and Ming Financial Corp. (1996)	Discovered in 1979. 250 km NE of Schefferville. Be deposit. Complex only partially exposed. Peralkaline granite complex about 6 km in diameter. Mineralization in roof zone of magma chamber.	Anstett, 1986; Castor, 1994; Jackson and Christiansen, 1993; Mariano, 1983b; Mariano, 1989; Miller, 1996; Roskill, 1994; Hedrick, 1997; Laval, 1992; Roskill, 1988; Howse and Wardle, 2001

DEPOSIT			Mineralogy			Geochronology
TYPE	Deposit or district name	STATUS	REE Mineralogy	Other Ore or Significant Minerals	Gangue and Rock-forming Minerals	Age (method, mineral, rock)
	Taohualashan				bio, cal	Precambrian?
	Umgabab	Past small producer	mon			
	Unsan					
	Urumqi					
	Wadi el Sahrm	Occurrence	all			
	Wuzhou					
	Xing'an		hing, mon	pyro, col, gad, zir	qtz, fld, rie, pyx	Jurassic-Cretaceous
	Xueshan					

Appendix A. REE Deposits  
USGS OFO2-189

DEPOSIT		Host Rock(s)	Company	COMMENTS	REFERENCES
TYPE	Deposit or district name				
	Taohuashan	marble, calcite biotite schist, dolomitic marble		Marble has sedimentary characteristics. Deposit has been classified as metasedimentary, "marine facies volcano-sedimentary carbonatite", and hydrothermal origin.	Zhang Peishan and others, 1995
	Umgabab			40 km S of Durban.	Roskill, 1988
	Unsan			Deposit is a gold mine.	Roskill, 1988
	Urumqi				Harben and Bates, 1990
	Wadi el Sahrm				Arab Organisation for Mineral Resources, 1987
	Wuzhou				Wen Lu, 1998
	Xing'an	alkaline granite; hornfels, tuff			Zhang Peishan and others, 1995
	Xueshan				Wen Lu, 1998
