

## TABLE OF CONTENTS

CHAPTER 1	
INTRODUCTION .....	1
CHAPTER 2	
OVERVIEW OF THE DEVELOPMENT OF DRAINAGE IN EUROPEAN AND AMERICAN CITIES THROUGH THE NINETEENTH CENTURY .....	3
CHAPTER 3	
HISTORY OF NEW ORLEANS DRAINAGE, 1718-1893 .....	9
CHAPTER 4	
HISTORY OF THE NEW ORLEANS DRAINAGE SYSTEM, 1893-1996 .....	17
The Drainage Advisory Board and the Drainage Plan of 1895 .....	17
Construction of the Drainage System, 1896-1910 .....	20
Expansion of the Drainage System, 1911-1945 .....	24
The Drainage System Since World War II .....	30
Histories of Drainage Pumping Stations Nos. 1, 3, 4, 6, and 7 .....	30
Drainage Pumping Station No. 1 .....	32
Drainage Pumping Station No. 3 .....	39
Drainage Pumping Station No. 4 .....	45
Drainage Pumping Station No. 6 .....	51
Drainage Pumping Station No. 7 .....	54
History of the Drainage Network .....	56
CHAPTER 5	
BIOGRAPHIES OF IMPORTANT PERSONAGES ASSOCIATED WITH THE NEW ORLEANS DRAINAGE COMMISSION AND THE SEWERAGE AND WATER BOARD OF NEW ORLEANS .....	69
Rudolph Hering .....	69
Chief Engineer Benjamin Morgan Harrod .....	70
Superintendent George G. Earl .....	72
Superintendent Alfred Francis Theard .....	73
Superintendent Albert Baldwin Wood .....	73
Background .....	79
CHAPTER 6	
NRHP EVALUATION OF DRAINAGE PUMPING STATIONS NOS. 1, 3, 4, 6, AND 7 AND OF THE NEW ORLEANS DRAINAGE SYSTEM .....	79
Engineering Description of the New Orleans Drainage System .....	79
Background .....	79
Design Constraints .....	79
System Description .....	80
Engineering Descriptions of Drainage Pumping Stations Nos. 1, 3, 4, 6, And 7 .....	81
Drainage Pumping Station No. 1 .....	81
Drainage Pumping Station No. 3 .....	81
Drainage Pumping Station No. 4 .....	82
Drainage Pumping Station No. 6 .....	82
Drainage Pumping Station No. 7 .....	82
Architectural Descriptions of Drainage Pumping Stations Nos. 1, 3, 4, 6, And 7 .....	82
Drainage Pumping Stations Nos. 1, 3, 6, And 7 .....	83
Drainage Pumping Station No. 1 .....	87

Drainage Pumping Station No. 3 .....	88
Drainage Pumping Station No. 6 .....	88
Drainage Pumping Station No. 7 .....	88
Drainage Pumping Station No. 4 .....	88
Evaluation of the Integrity of Drainage Pumping Stations Nos. 1, 3, 4, 6, And 7 .....	89
Evaluation of the Integrity of the Drainage System .....	89
Statement of Associative Significance (Criterion A) .....	91
Statement of Architectural Significance (Criterion C) .....	92
Statement of Engineering Significance (Criterion C) .....	93
Levels of Significance .....	96
CHAPTER 7	
RECOMMENDATIONS .....	99
Effects of Proposed Improvements .....	99
Drainage Pumping Station No. 1 .....	99
Drainage Pumping Station No. 3 .....	100
Drainage Pumping Station No. 4 .....	101
Drainage Pumping Station No. 6 .....	102
Drainage Pumping Station No. 7 .....	103
Effects of Proposed Improvements on Associative Significance (Criterion A) .....	104
Effects of Proposed Improvements on Architectural Significance (Criterion C) .....	104
Drainage Pumping Station No. 1 .....	104
Drainage Pumping Station Nos. 3, 6, and 7 .....	106
The Drainage System .....	108
Effects of Proposed Improvements on Engineering Significance (Criterion C) .....	108
Drainage Pumping Station No. 1 .....	108
Drainage Pumping Station Nos. 3, 6, and 7 .....	109
The Drainage System .....	112
Summary of Recommendations .....	112
APPENDIX I: INVENTORY OF DOCUMENTATION OF THE NEW ORLEANS	
DRAINAGE SYSTEM .....	123
Records of the Sewerage and Water Board of New Orleans .....	125
Sewerage and Water Board Network Department .....	229
Tulane University (Louisiana Collection) .....	259
APPENDIX II: SCOPE OF SERVICES .....	163

## LIST OF FIGURES

Figure 1. The Dublin Drainage Machine in the early 1890’s. On the right is the Corliss steam engine powering the machine (from Sewerage & Water Board 1971:23) .....	12
Figure 2. The Dublin Drainage Machine, no date (from Sewerage & Water Board 1966) .....	12
Figure 3. The “Old Melpomene Drainage Wheel,” no date (from <u>Martin Behrman Administration Biography</u> 1916) .....	13
Figure 4. “A Flood at Canal and Claiborne” by A.R. Waud, 1871 (from the Louisiana Collection, Howard-Tilton Memorial Library, Tulane University) .....	13
Figure 5. The Drainage system of New Orleans Prior to 1897 (from Earl 1903:4) .....	18
Figure 6. The New Orleans Drainage System as proposed in the 1895 Drainage Plan (from Fitzpatrick et al. 1895) .....	19
Figure 7. The New Orleans Drainage system as constructed to the end of 1902 (from Sewerage & Water Board 1902) .....	22
Figure 8. Broad Street Canal before cleaning, 1904 (from Sewerage & Water Board 1904) ..	23
Figure 9. Broad Street Canal after cleaning, 1904 (from Sewerage & Water Board 1904) ....	24
Figure 10. The drainage system of New Orleans in 1911, showing the system proposed in 1895 and construction to 1911 (from Sewerage & Water Board 1911) .....	25
Figure 11. Cross-section of a 12’ Wood screw pump (from Sewerage & Water Board 1914) ..	27
Figure 12. The New Orleans Drainage system as constructed to 1954 (from Sewerage & Water Board 1954) .....	31
Figure 13. Drainage Pumping Station No. 1 as originally built; photograph taken ca. 1911 (from the Louisiana Collection, Howard-Tilton Memorial Library, Tulane University) .....	32
Figure 14. Drainage Pumping Station No. 3 as originally constructed, 1909 (from Sewerage & Water Board 1909) .....	32
Figure 15. Drainage Pumping Station No. 6 as originally constructed, 1909 (from Sewerage & Water Board 1909) .....	32
Figure 16. Drainage Pumping Station No. 7 as originally constructed, 1909 (from Sewerage & Water Board 1909) .....	33
Figure 17. Interior of Drainage Pumping Station No. 1, ca. 1906 (from Earl 1906) .....	34
Figure 18. Vertical centrifugal pump motor housing of the type originally installed in Drainage Pumping Stations Nos. 1, 6, and 7, 1897-1903. This pump was manufactured by the E. P. Allis Co. and the motor was manufactured by the General Electric Co. This example remains at Drainage Pumping Station No. 7 .....	34

Figure 19. Lower portion of vertical centrifugal pump motor and drive shaft, of the type originally installed in Drainage Pumping Stations Nos. 1, 6, and 7, 1897-1903. Photographed at Drainage Pumping Station No. 7 .....	35
Figure 20. Vertical centrifugal pump pit, showing top of discharge pipe at right. These original pump pits, dating to 1897-1903, have been altered or eliminated at all stations except at Drainage Pumping Station No. 7, shown here .....	35
Figure 21. Drainage Pumping Station No. 1 during pump testing, 1904. The original caption states: "...shows one pump throwing 250 cubic feet of water per second over a weir erected for testing capacity of pumps. There are three similar pumps at this station" (from Sewerage & Water Board 1904) .....	36
Figure 22. Exterior of Drainage Pumping Station No. 1, after alteration for 12' Wood screw pumps, ca. 1914-1915. Original caption states: "showing the hydraulically operated flood gates and the discharge end of the twelve-foot screw pumps" (from Sewerage & Water Board 1914) .....	36
Figure 23. Exterior of Drainage Pumping Station No. 1, after alteration for 12' Wood screw pumps, photograph ca. 1915-1926 (from Sewerage & Water Board n.d.) .....	37
Figure 24. Interior view of Drainage Pumping Station No. 1, showing two 12' Wood screw pumps during installation, ca. 1914-1915 (from Sewerage & Water Board 1914) .....	37
Figure 25. Interior view of Drainage Pumping Station No. 1, showing switchboard and rotary apparatus during installation, ca. 1914-1915 (from Sewerage & Water Board 1914) ....	37
Figure 26. Interior view of Drainage Pumping Station No. 1 after installation of 12' Wood screw pumps and electrical equipment, ca. 1915. The Wood pumps are visible in the rear, the switch board to the right, and in the foreground, the motors for the vertical shaft screw pumps originally installed in the station ca. 1903-1904 (from Sewerage & Water Board 1915) .....	38
Figure 27. Testing of one 12' Wood screw pump at Drainage Pumping Station No. 1, ca. 1915. Original caption states: "...view of the discharge end of Pumping Station No. 1... pumping water from the area served by the Napoleon Avenue, Third Street, and Melpomene Street Canal into the Metairie Relief Canal on its way to Pumping Station No. 6. The picture shows discharge from one Wood screw pump through partly closed swinging control gates during the test. The discharge basin of this pumping station is so arranged...as to permit the discharging of the dry weather and small storm flow into the Broad Street Canal... This station is the first station designed to carry the dry weather flow across the city on its way to Lake Borgne, and thus relieve Lake Pontchartrain from the foul water which is pumped out of the city during dry weather or at the beginning of rains" (from Sewerage & Water Board 1915) .....	38
Figure 28. Testing of the 12' Wood screw pumps at Drainage Pumping Station No. 1 (background), ca. 1915. Pilot tubes have been placed in the Metairie Relief Canal to measure the velocity of flow. This data was used to calculate the efficiency of the pumps. Tulane engineering students are holding the tubes while engineers record data (from Sewerage & Water Board 1915) .....	39
Figure 29. Drainage Pumping Station No. 1. View of east facade, looking west from Martin Luther King Boulevard .....	39

Figure 30. Drainage Pumping Station No. 1. View looking southwest .....	40
Figure 31. Drainage Pumping Station No. 1. View looking northwest .....	40
Figure 32. Drainage Pumping Station No. 1. View looking south .....	41
Figure 33. Drainage Pumping Station No. 1. View looking southeast .....	41
Figure 34. Drainage Pumping Station No. 1. View of south facade, looking north .....	42
Figure 35. Drainage Pumping Station No. 1. View of northern end of interior, showing 12' Wood screw pumps and motors .....	42
Figure 36. Drainage Pumping Station No. 1. View of interior looking south from central portion of building. Foreground, prototype Wood screw pump on display; center, 250 cfs vertical screw pump motors .....	43
Figure 37. Testing of one 12' Wood screw pump at Drainage Pumping Station No. 1, ca. 1915. Original caption states: "...view of the discharge end of Pumping Station No. 1... pumping water from the area served by the Napoleon Avenue, Third Street, and Melpomene Street Canal into the Metairie Relief Canal on its way to Pumping Station No. 6. The picture shows discharge from one Wood screw pump through partly closed swinging control gates during the test. The discharge basin of this pumping station is so arranged...as to permit the discharging of the dry weather and small storm flow into the Broad Street Canal... This station is the first station designed to carry the dry weather flow across the city on its way to Lake Borgne, and thus relieve Lake Pontchartrain from the foul water which is pumped out of the city during dry weather or at the beginning of rains" (from Sewerage & Water Board 1915) .....	38
Figure 38. Drainage Pumping Station No. 1. View of interior, central portion of building, showing 30" Wood constant duty screw pump .....	44
Figure 39. Interior of Drainage Pumping Station No. 3 as originally constructed, showing horizontal centrifugal pumps, 1904 (from Sewerage & Water Board 1904) .....	44
Figure 40. Drainage Pumping Station No. 3, viewed from the northeast .....	45
Figure 41. Drainage Pumping Station No. 3, viewed from the northwest .....	46
Figure 42. Drainage Pumping Station No. 3, viewed from North Broad Avenue .....	46
Figure 43. Drainage Pumping Station No. 3, viewed from the northwest. Discharge basin and discharge pipes of 14' Wood screw pumps are visible .....	47
Figure 44. Drainage Pumping Station No. 3. View of discharge basin; 12' Wood pump at left, 14' Wood pumps at right (west) end of the station .....	47
Figure 45. Drainage Pumping Station No. 3, viewed from railroad bridge over the London Avenue Outfall Canal. View of the discharge basin .....	48
Figure 46. Drainage Pumping Station No. 3. View of interior looking east from the central portion of the building; in the foreground are two horizontal centrifugal constant duty pumps .....	48

Figure 47. Drainage Pumping Station No. 4, 1962, showing new 10' steel siphon over the London Avenue Outfall Canal (from Sewerage & Water Board 1962) .....	49
Figure 48. Drainage Pumping Station No. 4, viewed from the southeast. Pumping equipment is obscured by a tarpaulin; sand-blasting in progress .....	49
Figure 49. Drainage Pumping Station No. 4, viewed from the east .....	50
Figure 50. Drainage Pumping Station No. 4, viewed from the southwest, across the London Relief Outfall Canal .....	50
Figure 51. Figure 28. Interior of Drainage Pumping Station No. 6 as originally constructed, showing vertical centrifugal pumps (from Sewerage & Water Board 1904) .....	51
Figure 52. Interior view of Drainage Pumping Station No. 6, showing original vertical centrifugal pumps, 1909 (from Sewerage & Water Board 1909) .....	51
Figure 53. Drainage Pumping Station No. 6, after 1914 and 1929 extensions (from Sewerage & Water Board 1929) .....	52
Figure 54. Interior of Drainage Pumping Station No. 6 after installation of 14' Wood screw pumps (from Sewerage & Water Board) .....	53
Figure 55. Drainage Pumping Station No. 6, 1966 (from Sewerage & Water Board, 1966) ..	53
Figure 56. Drainage Pumping Station No. 6, viewed from the southwest .....	54
Figure 57. South facade of Drainage Pumping Station No. 6 .....	54
Figure 58. Drainage Pumping Station No. 6, joint of 1897-1899 construction and 1986-1989 addition .....	54
Figure 59. Drainage Pumping Station No. 6, viewed from the north .....	55
Figure 60. Drainage Pumping Station No. 6. View of interior looking east; in the foreground are 250 cfs vertical centrifugal pump motors. The remainder of the pumps are Wood screw pumps; in the foreground are two 12' pumps, and in the background are four 14' pumps .....	55
Figure 61. Drainage Pumping Station No. 7. View from the southwest .....	57
Figure 62. Drainage Pumping Station No. 7. View from the southeast .....	57
Figure 63. Drainage Pumping Station No. 7. Viewed from the northeast, showing trash screen and hydraulic sluice gate mechanisms .....	58
Figure 64. Drainage Pumping Station No. 7. View of interior, showing motor covers of 250 cfs centrifugal "flathead" pumps .....	58
Figure 65. Drainage Pumping Station No. 7. View showing end of monitor .....	59
Figure 66. Drainage Pumping Station No. 7. Wooden vehicle door on west end of building	59

Figure 67. Old and new sections of small canals, from the 1902 Board of Inquiry report (from Hering et al. 1902) .....	64
Figure 68. Excavation of the Orleans Canal, n.d.; possibly ca. 1904 (from Louisiana Collection, Howard-Tilton Memorial Library, Tulane University) .....	64
Figure 69. Interior of the Hagan Avenue Canal, shown during construction, ca. 1906. This concrete-lined and covered canal was constructed 1904-1906 (from Sewerage & Water Board 1906a) .....	65
Figure 70. Melpomene Outfall Canal, 1906. The canal was timber-lined and the banks graded, 1905-1906. Drainage Pumping Station No. 1 is in the background (from Sewerage & Water Board 1906a) .....	65
Figure 71. Melpomene Outfall Canal after timber lining and grading, 1906 (from Sewerage & Water Board 1906b) .....	65
Figure 72. Sections of covered canals; old masonry and new concrete sections, 1910 (from Sewerage & Water Board 1910) .....	65
Figure 73. Napoleon Avenue Canal under construction, 1912 (from Sewerage & Water Board 1912) .....	66
Figure 74. Napoleon Avenue Canal under construction, interior view, 1912 (from Sewerage & Water Board 1912) .....	66
Figure 75. Interior view of the Broad Street culvert, July 27, 1913 (from Louisiana Collection, Howard-Tilton Memorial Library, Tulane University) .....	66
Figure 76. Interior view of the Broad Street culvert, July 27, 1913 (from Louisiana Collection, Howard-Tilton Memorial Library, Tulane University) .....	67
Figure 77. Upper end of the Metairie Relief Canal view from Drainage Pumping Station No. 1, 1914 (from Sewerage & Water Board 1914) .....	67
Figure 78. Lower end of the Metairie Relief Canal, approaching Pumping Station No. 6, 1914 (from Sewerage & Water Board 1914) .....	67
Figure 79. Construction of box culvert, Jefferson Davis Parkway, ca. 1961-1962 (from the Louisiana Collection, Howard-Tilton Memorial Library, Tulane University) .....	68
Figure 80. B.M. Harrod, Chief Engineer and architect for the New Orleans Drainage Commission, 1893-1902 (from Tompkins 1901:206) .....	70
Figure 81. George G. Earl, General Superintendent of the Sewerage and Water Board, 1900-1931 (from Martin Behrman Administration Biography, 1916) .....	72
Figure 82. Albert Baldwin Wood, General Superintendent of the Sewerage & Water Board, 1939-1956 (courtesy of the Sewerage & Water Board of New Orleans) .....	73
Figure 83. Typical column bay, Drainage Pumping Station No. 6. The bay proportions are uniform for Drainage Pumping Stations 1, 3, 6, and 7 (from Historic American Building Survey 1992) .....	83

Figure 84. Drainage Pumping Station No. 1. View of east facade, showing brick depth and projection .....	84
Figure 85. Drainage Pumping Station No. 1. View of upper portion of east facade of building, showing pilasters, wall, and entablature, quarter-round bricks at transition to cornice, and decorative cast-metal false keystone on window .....	84
Figure 86. Drainage Pumping Station No. 1. View of upper portion of southeast corner of building, showing projection of fascia brick courses and decorative metal castings .....	84
Figure 87. Drainage Pumping Station No. 1. View of upper portion of southeast corner of building, showing special round bricks, corner treatment of architrave, and quarter-round brick course below cornice .....	84
Figure 88. Drainage Pumping Station No. 1. View of roof on eastern side of building, showing decorative terra-cotta crest on monitor. The joint between the 1899-1904 masonry and 1915 construction is visible above the central pilaster .....	85
Figure 89. Drainage Pumping Station No. 1. View of west side of south facade, showing door and shuttered transom window .....	85
Figure 90. Drainage Pumping Station No. 1. View of east facade pilaster base, showing course of beveled bricks .....	86
Figure 91. Drainage Pumping Station No. 1. View of the monitor roof peak at the northern end of the building, with terra-cotta crest and finial .....	86
Figure 92. Drainage Pumping Station No. 1. View of lower portion of northwest corner of building, showing special round bricks and pilaster bases at corner .....	87

## LIST OF TABLES

Table 1. Building Dates of Drainage Pumping Stations 1,3,4,6, and 7 .....	31
Table 2. Drainage Network Construction, 1896-1941.....	60
Table 3. Pumps in Drainage Pumping Stations Nos. 1,3,4,6, and 7 .....	94

## ACKNOWLEDGMENTS

The authors are grateful for the invaluable assistance of General Superintendent G. Joseph Sullivan of the Sewerage and Water Board of New Orleans, and for the never-failing cooperation of his staff, particularly Rudolph St. Germain, Robert Moeinian, James Parker, and Paul Hilborn. The operators on duty at the individual Drainage Pumping Stations must also be recognized for the courteous and knowledgeable guidance they provided during tours of their beautifully maintained facilities. The pride taken by employees of the Sewerage and Water Board in the remarkable drainage system of this city should be shared by all New Orleanians. Additional assistance to the research efforts of the authors was kindly provided by Gary Van Zante of the Southeastern Architectural Archives, Tulane University, and by the Archives of Harvard University. Finally, Dr. Edwin Lyon and Mr. Michael Stout of the New Orleans District, Army Corps of Engineers, served as Contracting Officer's Representative and Contracting Officer's Technical Representative, respectively, for this project, and we would like to thank them for their assistance and guidance.
