## Tolerances for Item \#10

| Alcohol <br> Percentage <br> Simple Mixtures | Processes Other <br> Than Simple <br> Mixtures $*$ |  |
| :---: | :---: | :---: |
| $>95-100$ | $93-100$ | $91-100$ |
| $>90-95$ | $88-95$ | $86-95$ |
| $>80-90$ | $+/-3.5$ | $+/-4.5$ |
| $>70-80$ | $+/-3.0$ | $+/-4.0$ |
| $>60-70$ | $+/-2.5$ | $+/-3.5$ |
| $>40-60$ | $+/-2.0$ | $+/-3.0$ |
| $>20-40$ | $+/-1.5$ | $+/-2.5$ |
| $>1-20$ | $+/-0.5$ | $+/-2.0$ |
| $0.5-1.0$ |  | $+/-0.5$ |

Please note that the percentages are absolute. For example, at $18 \%$ alcohol by volume, the value in $\# 10$ for a simple mixture should be $18+/-1.0$. In addition, the value in box $\# 10$ cannot be less than zero for any range.

* Due to the inherent variability associated with processing botanical materials, we allow a range of $+/-5$ for dietary supplements. However, the value in box $\# 10$ cannot exceed the amount of alcohol theoretically present, and cannot be less than zero.
