- Total net marketable pay down for Q3 FY 2007 was nearly \$139 billion, the largest pay down since Q2 FY 2001 (not shown).
- Bills accounted for \$164 billion of the Q3 net reduction.

• Q3 net SLGS issuance was once again robust.

• Despite seasonality in cash balances bill issuance remains stable.

Debt Portfolio

Assumptions used in the next 4 charts:

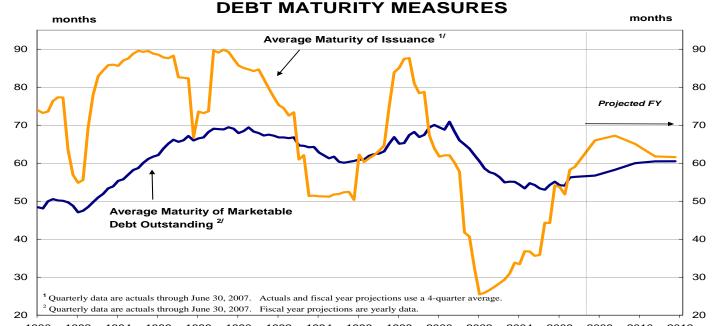

- Future residual financing needs are spread proportionally across auctioned securities and are derived from *hypothetical* initial coupon auction sizes. These sizes are based on prior quarter announced amounts and assume the outstanding level of bills on September 30, 2006.
- OMB 2008 MSR Budget deficit estimates, except internal Treasury estimate for current fiscal year

Using the above assumptions, over the next 5 years:

- Average maturity of total outstanding debt rises to 60 months
- Average maturity of issuance settles to approximately 62 months
- The percent of debt maturing with 3 years or less to maturity declines to 53 percent

 Average maturity of issuance rises following the discontinuation of 3-year note issuance.

Distribution of Marketable Debt Outstanding by Security

 If future financing needs are spread proportionally, current issuance patterns would lead to an increased share of longer-term debt.

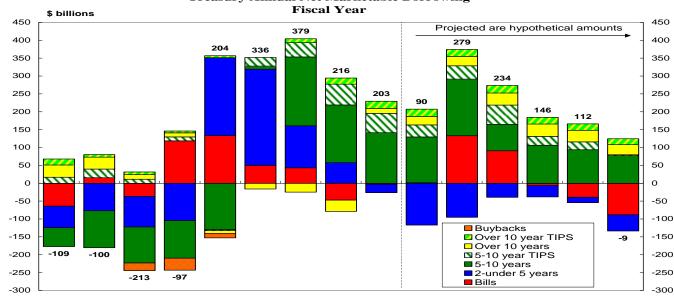

Net financing projections for FY 2007-2012 are based on OMB 2008 MSR estimates except internal FY 2007 deficit estimate. Future residual financing needs are spread proportionally across auctioned securities and are derived from hypothetical initial coupon auction sizes. These sizes are based on prior quarter announced amounts and assume the outstanding level of bills on September 30, 2006.

If future financing needs are spread proportionally, projected short-term debt rollover percentages will continue to decline.

Net financing projections for FY 2007-2012 are based on OMB 2008 MSR estimates except internal FY 2007 deficit estimate. Future residual financing needs are spread proportionally across auctioned securities and are derived from hypothetical initial coupon auction sizes. These sizes are based on prior quarter announced amounts and assume the outstanding level of bills on September 30, 2006.

 Based on OMB fiscal projections, net marketable borrowing will rise in FY 2008, but decline steadily thereafter.

2000 2005 2006 2007 2008 2009 2012 FY 1998 1999 2001 2002 2003 2004 2010 2011 Net financing projections for FY 2007-2012 are based on OMB 2008 MSR estimates except internal FY 2007 deficit estimate. Future residual financing needs are spread Net financing projections for FY 2007-2012 are based on OND 2000 MSR estimates except internal F1 2007 dense estimates is considered amounts and proportionally across auctioned securities and are derived from hypothetical initial coupon auction sizes. These sizes are based on prior quarter announced amounts and **8** assume the outstanding level of bills on September 30, 2006.

Treasury Annual Net Marketable Borrowing

Uncertainty

- OMB MSR estimates indicate declining borrowing needs after FY 2008, with a return to surplus in FY 2012
- Volatility in projected receipts and continued strength in net nonmarketable issuance could lead to greater variation in bill and coupon issuance

FY 07 Deficit Estimates

\$ billions

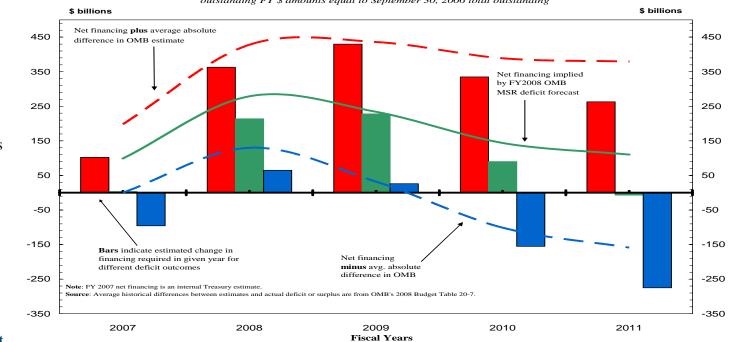

| | | Primary Dealers* | СВО | OMB |
|---|--|------------------|----------|---------|
| Strength in receipts have led to lower deficit estimates. | Current: | 161 | 177 | 205 |
| | Range based on average absolute forecast error | 119-203 | 166-188 | 168-242 |
| | Estimates as of: | July 07 | March 07 | July 07 |

Note: Ranges based on errors from 2002-2006.

* Primary Dealers reflect average estimate.

Financing Need Given Current Issuance Calendar

Assumes current coupon issuance pattern and issuance amount -- Weekly bill issuance at levels required to maintain outstanding FY \$ amounts equal to September 30, 2006 total outstanding

Based on OMB projections ٠ the implied additional marketable financing need is \$214 billion for FY 2008.

٠
