

Explanation

Landslide Hazard

- Low (less than 1% of area involved)
- Moderate (1.5-2% of area involved)
- High (greater than 2% of area involved)

Landslide Susceptibility/Incidence

- Moderate susceptibility/low incidence
- High susceptibility/low incidence
- High susceptibility/landslide incidence

Introduction

This map is a preliminary digital version of the Landslide Overview Map of the Conterminous United States (USGS Professional Paper 1183) published in 1982. The map shows the distribution of landslides in the conterminous United States. The map is based on a synthesis of published information on landslides in the conterminous United States. The map is based on a synthesis of published information on landslides in the conterminous United States. The map is based on a synthesis of published information on landslides in the conterminous United States.

Methods Used to Compile Professional Paper 1183

The map is based on a synthesis of published information on landslides in the conterminous United States. The map is based on a synthesis of published information on landslides in the conterminous United States. The map is based on a synthesis of published information on landslides in the conterminous United States.

Methods Used in Preparing Digital Version

The map is based on a synthesis of published information on landslides in the conterminous United States. The map is based on a synthesis of published information on landslides in the conterminous United States. The map is based on a synthesis of published information on landslides in the conterminous United States.
