

DESCRIPTION OF SCENE

This Viking approach, with a view of the horizon, shows the terrain. The terrain is highly eroded and rocky. The rocks are of various sizes and shapes. The ground is covered in a dense field of rocks and pebbles. The horizon is visible in the distance.

THE VIKING MISSION

The Viking mission was the first American Mars mission. It consisted of two orbiters and two landers. The landers were designed to study the Martian surface and atmosphere. The mission was a major success for the United States and the world.

VIKING LANDER MOBILE

The Viking Lander mobile was the first mobile on Mars. It was designed to move across the Martian surface and collect samples. The mobile was a major success for the United States and the world.
